Introduction

This chapter introduces the Honeywell HRG 4-Channel, 8-Channel, and 16-Channel Performance Series DVRs and provides an overview of how to operate the HRG DVR using various methods.

Overview

Developed using the latest technology, the Honeywell HRG Performance Series DVRs (HRG DVRs) combine the latest in advanced H.264 video encoding and decoding technologies to deliver high performance, rock-solid reliability, and longer recording times.

The Honeywell HRG DVRs can be used either as standalone video surveillance products or used to build a powerful surveillance network. This flexibility makes them perfect for small business applications.

Product Features

Feature Overview

- 4, 8, or 16 video inputs (model dependent).
- H.264 video compression with excellent reliability and superior definition.
- 4 audio inputs, 1 audio output.
- IR remote controller and mouse included
- Independent video encoding parameters, including frame rate, resolution, bit rate, and video quality.
- Remote access from iPhone and Android devices.
- Multi-site software.
- Recording rates up to 120 (4-channel), 240 (8-channel) and 480 (16-channel) ips @ 4CIF resolution.
- PTZ dome control.

Local Monitoring Features

- Up to 1280 × 1024 resolution for VGA output display.
- Simultaneous VGA and CVBS output.
- Multi-camera video live view, with an adjustable camera order.
- Group switch, manual switch, and automatic cycles modes that are selectable for video live view, with a configurable auto-cycle period.
- Digital zoom in live mode.
- Shield of assigned channels for live view.
- Privacy masking support.
- Multiple PTZ protocols support, including the setting and call up of presets, patrols, and patterns.
- Video image zoom-in by clicking the mouse and tracing by dragging the mouse in PTZ control mode.

Hard Disk Drive Management Features

- S.M.A.R.T. technology.
- HDD standby function.

Recording Features

- Cycle and non-cycle recording mode.
- Normal and event video encoding parameters.
- Multiple recording types, including manual, normal, alarm, motion, motion/alarm, and motion + alarm recording.
- Eight recording time periods, with separate recording types.
- Pre-record and post-record time intervals for alarm and motion detection, and pre-record time intervals for scheduled and manual recording.
- Lock and unlock video files.
- HDD can be set to read-only.
- Video data search and playback by channel number, recording type, and time.
- Digital zoom function in playback mode.
- Pause, fast forward play, slow play, skip forward, and skip backward available during playback.
- Up to 4/8/16-channel synchronous playback.

Backup Features

- Back up recorded files to a USB or SATA device.
- Bunch backup by file or by time.
- Recorded files edited for backup in playback.
- Management and maintenance for backup devices.

Alarm and Exception Features

- Configurable arming time for alarm in/out.
- Support of various exception alarm types, including: alarms for video loss, motion detection, video tampering, unmatched video in/out format, illegal access, network disconnection, IP conflict, hard disk error, and hard disk full.
- Support of various exception alarm handling methods, including: pop-up alarm image on the monitor, audible warnings, surveillance center notifications, alarm output triggers, and send emails.
- Auto recovery from exceptions.

Other Features

- Use a mouse or the IR remote control to control the HRG DVR.
- Three-level user management. Each user has individual operating permission for the HRG DVR and cameras.
- Powerful recording and searching of operation, alarm, and exception logs.
- Import/export of device configuration files.

Network Features

- 10M/100M adaptive network interface.
- TCP/IP protocol suites, PPPoE, DHCP, DNS, DDNS, NTP, SADP protocols.
- Unicast and multicast supported; TCP and UDP protocols applicable in unicast transmission.
- Remote search, playback and download, lock/unlock of video files.
- Breakpoint resume support.
- Remote access and configuration of parameters; remote import/export of device configuration parameters.
- Remote access of device running status, system log, and alarm status.
- Remote formatting of hard disk, upgrade, reboot/shutdown, and other system maintenance operations.
- Event alarm and exceptions upload to a remote management host.
- Remote video image capture in JPEG format.
- Remote PTZ control.
- Voice talk and broadcast.
- Built-in WEB Server.

System Diagram

Connect your HRG DVR as shown in [Figure 1-1](#).

Figure 1-1 System Diagram (HRG4 DVR shown)

Operating the HRG DVR

You can use the following tools to navigate and operate your HRG DVR.

- the front panel controls (see [Front Panel on page 16](#))
- the IR (Infrared) remote (see [Using the IR Remote Control on page 19](#))
- a mouse (see [Using a USB Mouse on page 20](#))
- the virtual keyboard (see [Using the Virtual Keyboard on page 21](#))

Front Panel

Familiarize yourself with the front panel controls for your HRG DVR.

HRG4 Front Panel

Figure 1-2 HRG4 Front Panel

Table 1-1 HRG4 Front Panel Controls and Indicators

Position	Control/Indicator	Function
1	Status Indicators	
	POWER	Turns green when the HRG DVR is on.
	STATUS	Illuminates when the compound key switches to numeric/letter input mode.
	Tx/Rx	Flickers green when the network connection is functioning normally.
2	IR Receiver	Sensor for IR Remote Controller.
3	Compound Buttons	
	1/MENU	Enter number "1"; Access the main menu.
	2/ABC/F1	Enter number "2" or letters "A", "B", "C"; The F1 button when used in a list field will select all items on the list. In PTZ Control mode, it will turn on/off PTZ light.
	3/DEF/F2	Enter number "3" or letters "D", "E", "F"; The F2 button is used to cycle through tab pages. It will also bring up the Channel and OSD Position settings.
	4/GHI/ESC	Enter number "4" or letters "G", "H", "I"; Exit and back to the previous menu.
	5/JKL/EDIT	Enter number "5" or letters "J", "K", "L"; Delete characters before cursor; Select the check box and ON/OFF switch; Start/stop record clipping in playback.
	6/MNO/PLAY	Enter number "6" or letters "M", "N", "O"; Playback, for direct access to playback interface.
	7/PQRS/REC	Enter number "7" or letters "P", "Q", "R", "S"; Manual record, for direct access to manual record interface; manually enable/disable record.
	8/TUV/PTZ	Enter number "8" or letters "T", "U", "V"; Access to PTZ control interface.
	9/WXYZ/PREV	Enter number "9" or letters "W", "X", "Y", "Z"; Multi-camera display in live view.
	0/A	Enter number "0"; Switch between input methods (upper and lowercase alphabet, symbols and numeric input).
4	SHIFT	Switches the compound keys functions from inputting the numeric/letter values to the functional controls.
5	Control Buttons	Directional buttons: In menu mode, the direction buttons are used to navigate between different fields and items and select setting parameters. In playback mode, the Up and Down buttons are used to speed up and slow down record play, and the Left and Right buttons are used to select the recording 30s forwards or backwards. In Live View mode, these buttons can be used to cycle through channels.
		Enter: The Enter button is used to confirm selection in the Menu mode; or used to select check box fields and ON/OFF switch. In playback mode, it can be used to play or pause the video. In single-frame play mode, pressing the Enter button advances the video by a single frame. And in auto sequence live view mode, the buttons can be used to pause / resume auto sequence.
6	USB Port	Connection for a USB mouse or USB flash memory device.

HRG8 and HRG16 Front Panel

Figure 1-3 HRG8 and HRG16 Front Panel

Position	Button/Indicator	Function
1	USB Port	Connection for a USB mouse or USB flash memory device.
2	Status Indicators	
	POWER	Turns green when the HRG DVR is on.
	READY	Turns green when the device is running normally.
	STATUS	Illuminates when the compound key switches to numeric/letter input mode.
	ALARM	Turns red when there is a sensor alarm occurring.
	HDD	Flickers red when the HDD is reading or writing.
	Tx/Rx	Flickers green when the network connection is functioning normally.
3	IR Receiver	Sensor for IR Remote Controller.
4	Compound Buttons	
	1/MENU	Enter number "1"; Access the main menu.
	2/ABC/F1	Enter number "2" or letters "A", "B", "C"; The F1 button when used in a list field will select all items on the list. In PTZ Control mode, it will turn on/off PTZ light.
	3/DEF/F2	Enter number "3" or letters "D", "E", "F"; The F2 button is used to cycle through tab pages. It will also bring up the Channel & OSD Position settings.
	4/GHI/ESC	Enter number "4" or letters "G", "H", "I"; Exit and back to the previous menu.
	5/JKL/EDIT	Enter number "5" or letters "J", "K", "L"; Delete characters before cursor; Select the check box and ON/OFF switch; Start/stop record clipping in playback.
	6/MNO/PLAY	Enter number "6" or letters "M", "N", "O"; Playback, for direct access to playback interface.
	7/PQRS/REC	Enter number "7" or letters "P", "Q", "R", "S"; Manual record, for direct access to manual record interface; manually enable/disable record.
	8/TUV/PTZ	Enter number "8" or letters "T", "U", "V"; Access to PTZ control interface.
	9/WXYZ/PREV	Enter number "9" or letters "W", "X", "Y", "Z"; Multi-camera display in live view.
	0/A	Enter number "0"; Switch between input methods (upper and lowercase alphabet, symbols and numeric input).
5	SHIFT	Switches the compound keys functions from inputting the numeric/letter values to the functional controls.
6	Control Buttons	<p>Directional buttons: In menu mode, the direction buttons are used to navigate between different fields and items and select setting parameters. In playback mode, the Up and Down buttons are used to speed up and slow down record play, and the Left and Right buttons are used to select the recording 30s forwards or backwards. In Live View mode, these buttons can be used to cycle through channels.</p> <p>Enter: The Enter button is used to confirm a selection in the Menu mode; or used to select check box fields and the ON/OFF switch. In playback mode, it can be used to play or pause the video. In single-frame play mode, pressing the Enter button advances the video by a single frame. And in auto sequence live view mode, the buttons can be used to pause / resume auto sequence.</p>

Using the IR Remote Control

Your HRG DVR may also be controlled with the IR remote control. Batteries (2 x AAA) must be installed before operation.

Figure 1-4 IR Remote Control

Table 1-2 IR Remote Control

#	Button	Function
1	POWER	Turn On/Off the HRG DVR.
2	DEV	Enable/Disable Remote Control
3	Alphanumerics	Same as front panel
4	EDIT	Same as JKL/EDIT on front panel.
5	A	Same as 0/A on front panel.
6	REC	Same as 7/PQRS/REC on front panel.
7	PLAY	Same as 6/MNO/PLAY on front panel.
8	INFO	Reserved.
9	VOIP	Same as 2/ABC/F1 on front panel.
10	MENU	Same as 1/MENU on front panel.
11	PREV	Same as 9/WXYZ/PREV on front panel.
12	DIRECTION/ENTER	Same as on front panel.
13	PTZ	Same as 8/TUV/PTZ on front panel.
14	ESC	Same as ESC on front panel.
15	RESERVED	Reserved.
16	F1	Same as 2/ABC on front panel.
17	PTZ CONTROL Buttons	Use to adjust the iris, focus, and zoom.
18	F2	The F2 button is used to cycle through tab pages. It can also be used to enter the Channel and OSD Position settings.

See [HRG4 Front Panel on page 17](#) and [HRG8 and HRG16 Front Panel on page 18](#) for more about front panel controls.

Configuring the IR Remote Control

Aim the remote control at the IR receiver located at the front of the unit to test operation. If there is no response, try the following steps:

1. Use the front control panel or the mouse to navigate to **Menu > Settings > General > More Settings**.
2. Check and remember the HRG DVR ID number. The default ID number is **255**. This ID number is valid for all IR remote controls.
3. Press **DEV** on the remote.
4. Enter the **DVR ID number** from step 2.
5. Press **ENTER** on the IR remote control.

The Status indicator on the front panel should turn green to indicate that the remote control is operating properly.

Using a USB Mouse

A regular 3-button (Left/Right/Scroll-wheel) USB mouse can also be used with this HRG DVR.

Connecting a USB Mouse

- Plug the USB mouse into one of the USB ports on the front panel of the HRG DVR.

The mouse should automatically be detected. If, in a rare case, that the mouse is not detected, please refer to the recommended device list from your provider.

USB Mouse Controls

Table 1-3 Mouse Controls

Control	Action	Result
Left button	Single click	Select a menu component, such as a button or an input field. This is similar to pressing the ENTER button on the remote/front panel controls.
	Double click	Switch between single screen and multi-screen mode in Live View/ Playback mode.
	Click and drag	Click and drag the Left mouse button to control the pan/tilt of a PTZ camera as well as to vary the position of the digital zoom area and the camera OSD. It can also be used to setup the alarm areas.
Right button	Single click	Shows pop-up menu.
Scroll wheel	Scroll up	In Live View mode, scrolling up will switch to the previous screen. In Menu mode, it will move the selection to the previous item.
	Scroll down	In Live View mode, scrolling down will switch to the next screen. In Menu mode, it will move the selection to the next item.

Using the Virtual Keyboard

When a mouse is used to perform a task on the HRG DVR, clicking on a text input field brings up the Virtual Keyboard.

Figure 1-5 Virtual Keyboard

Table 1-4 Virtual Keyboard Controls

Virtual key	Name	Function
	Lowercase	Indicates that lowercase input is being used.
	Uppercase	Indicates that uppercase input is being used.
	Switch to lowercase	Switch to lowercase input.
	Switch to uppercase	Switch to uppercase input.
	Number	Indicates that number input is being used.
	Symbols	Switch to symbols input.
	Backspace	Delete a character in front of the cursor.
	Enter	Confirm selection.
	ESC	Exit out of the virtual keyboard.

Rear Panel

Use these diagrams to make the rear panel connections.

HRG4 Rear Panel Connections and Switches

Figure 1-6 HRG4 Rear Panel Connections and Switches

Table 1-5 HRG4 Rear Panel Connections and Switches

Position	Connection/Switch	Function
1	Video In	BNC connectors for analog video input.
2	Video Out	BNC connectors for video output.
3	Audio In	RCA connectors for analog audio input.
4	Line In	RCA connector for audio input.
5	Audio Out	RCA connector for audio output.
6	LAN	Connector for LAN (Local Area Network).
7	VGA	DB15 connector for VGA output. Display local video output and menu.
8	USB	Connector for USB devices.
9	RS-232 Port	DB9 connector for RS-232 devices.
10	Alarm In	Connector for alarm input.
	Alarm Out	Connector for alarm output.
	RS-485 Port	Connector for RS-485 devices. T+, T- pins connect to PTZ.
11	Power	Switch for turning On/Off the device.
12	12 V	12 V DC power supply.
13	GND	Ground (needs to be connected when HRG DVR starts up).

HRG8 Rear Panel Connections and Switches

HRG16 Rear Panel Connections and Switches

Table 1-6 HRG8 and HRG16 Rear Panel Connections and Switches

Position	Connection/Switch	Function
1	Main Video Out	BNC connectors for analog video input.
	Spot Video Out	BNC connectors for spot video out
2	Video In	BNC connectors for analog video input.
3	Audio In	RCA connectors for analog audio input.
4	Line In	RCA connector for audio input.
5	Audio Out	RCA connector for audio output.
6	RS-232 Port	DB9 connector for RS232 devices.
7	VGA	DB15 connector for VGA output. Display local video output and menu.
8	LAN	Connector for LAN (Local Area Network).
9	USB	Connector for USB devices.
10	RS-485 Port	Connector for RS-485 devices. T+, T- pins connect to PTZ.
11	Alarm In	Connector for alarm input.
	Alarm Out	Connector for alarm output.
12	12 V	12 V DC power supply.
13	Power	Switch for turning On/Off the device.
14	GND	Ground (needs to be connected when HRG DVR starts up).

2

Getting Started

This chapter covers:

- Starting and shutting down the HRG DVR
- Rebooting and locking the HRG DVR
- Using the Setup Wizard
- Setting the date and time

Starting and Shutting Down the HRG DVR

Proper startup and shutdown procedures are crucial to maintaining the life of your HRG DVR.

Starting the HRG DVR

Note Ensure that the input voltage meets the requirements of the HRG DVR, and that the GND is grounded.

Note Ensure that the VGA on the HRG DVR rear panel is connected to a display device, or that the VIDEO OUT port is connected to a monitor. You cannot view and navigate the menu without being connected to a monitor.

1. Ensure the power supply is plugged into an electrical outlet. It is HIGHLY recommended that you use an Uninterruptible Power Supply (UPS) in conjunction with the unit.
2. Press the **POWER** switch on the rear panel. After the power has been started up, the POWER indicator on the HRG DVR will light green.

Shutting Down the HRG DVR

1. Click **Menu** ► **ShutDown** to enter the **Shutdown** menu (see [Figure 2-1](#)).

Figure 2-1 .Shutdown Menu

2. Click **ShutDown**.
3. Click **Yes** in the pop-up window to confirm that you want to shut down the HRG DVR.

Rebooting and Locking the HRG DVR

While in the Shutdown menu, you can also reboot or lock your HRG DVR. Locking your HRG DVR will return you to the Live View mode, which requires a user name and password to exit out of it. The Reboot button reboots your HRG DVR.

1. Click **Menu** ► **ShutDown** to enter the Shutdown menu (see [Figure 2-1](#)).
2. Click **Lock** or **Reboot**.

Using the Setup Wizard

By default, the Setup Wizard prompt appears when you turn on the HRG DVR (see [Figure 2-2](#)). The Setup Wizard guides you to configure some of the important settings for your HRG DVR.

Note If the check box is cleared , then the Setup Wizard will not run again until the factory default settings are resumed.
If the check box is selected , then the Setup Wizard will start the next time the HRG DVR is turned on.

Figure 2-2 Setup Wizard

1. Click **Next** to open the **User Permission** window (see [Figure 2-3](#)).

Figure 2-3 User Permission Window

2. Navigate to the **Admin Password** input field. Enter the admin password into the **Admin Password** input field. By default, the password is **12345**.
3. Select the **New Admin Password** check box to change the admin password. Enter the new password and confirm.
4. Click **Next** to continue to the **HDD Management** window.

Figure 2-4 Entering the HDD Management Window

5. At the prompt, click **Enter** to open the HDD Management window (see [Figure 2-5](#)).
6. If a new hard drive was recently installed, select the HDD from the list, and then click **Init** to initialize it.

Initializing the HDD will format it and remove all data from it.

Figure 2-5 HDD Management Window

7. After the HDD has been initialized, click **OK** to return to the **Setup Wizard**.
8. Click **Next** to continue to the **Record Settings** window.

Figure 2-6 Entering the Record Settings Window

9. At the prompt, click **Enter** to open the Record Settings window (see [Figure 2-7](#)).
10. Select the **Schedule** tab.

Figure 2-7 Schedule Tab

11. Click **Edit**.
A new recording schedule opens (see [Figure 2-8](#)).

Figure 2-8 Entering a New Recording Schedule

12. Select both the **Enable Schedule** and **All Day** check boxes to enable the recording schedule and allow it to record continuously all day.
13. Click **OK** to return to the **Schedule** tab.

Note To copy the schedule to a different channel, select the channel or all under **Copy To**, and then click **Copy** (see [Figure 2-9](#)).

Figure 2-9 Copying a Schedule

14. Click **Next** to continue to the Network Settings window.

Figure 2-10 Entering the Network Settings Window

15. At the prompt, click **Enter** to open the Network Settings window (see [Figure 2-11](#)).

Figure 2-11 Network Settings Window

16. Enter the **IP Address**, **Subnet Mask**, and **Default Gateway**.
17. Click **OK** to return to the Setup Wizard.
18. When you are finished entering settings, click **Done** to close the Setup Wizard.
This completes the initial setup process. Continue to [Setting the Date and Time](#).

Setting the Date and Time

You must set up the system date and time to accurately timestamp recordings and events.

To set up the date and time:

1. Open the **General Settings Menu** by doing one of the following:
 - Press **MENU** on the remote control or the front panel of the HRG DVR.
 - Right-click with the mouse, and then click **Menu**.
2. Click **Settings**, and then click **General** to enter the General Settings menu.

Figure 2-12 Setting the Date and Time

3. Enter the correct date and time in the **System Time** field.
4. Click **Apply** to save the settings.

3

Live View

This chapter describes the Live View on-screen display and how to operate and configure the Live View display.

On-screen Display in Live View

Live View mode starts automatically when the HRG DVR is turned on. You can return to Live View mode from any submenu by pressing **ESC** multiple times.

Live View Icons

Some icons are provided on screen in Live View mode to indicate different camera status. These icons include:

Main Output

Aux Output

Event Alarm: Indicates video loss, video tampering, motion detection, or relay alarm.

Record: Indicates the current channel that is recording. The recording can be started manually or from a schedule, and/or when a motion detection or alarm event is triggered.

Event Alarm & Record

Operating Live View

In Live View mode, you can select the following options:

- | | |
|-------------------------------|--|
| Display Single Camera | <ul style="list-style-type: none"> • Front Panel/Remote: Use the alphanumeric buttons. • Mouse: Right-click anywhere in the window, and then click Single Camera. |
| Multi-camera Live View | <ul style="list-style-type: none"> • Front Panel/Remote: Press the PREV button. • Mouse: Right-click anywhere in the window, and then click Multi Camera. |
| Manual Switch | <ul style="list-style-type: none"> • Front Panel/ Remote: Press the left arrow button to access the previous screen. Press the right arrow button to access next screen. • Mouse: Right-click anywhere in the window, and then click Next Screen. |
| Auto Sequence | <ul style="list-style-type: none"> • Front Panel/Remote: Press the ↵ (Enter) button. • Mouse: Right-click anywhere in the window, and then click Start Auto-switch. |
| Digital Zoom | <ul style="list-style-type: none"> • Mouse: Right-click anywhere in the window, and then click Digital Zoom. |

Using the Mouse in Live View

Some functions of the Live View can be quickly accessed by clicking the right mouse button (see [Figure 3-1](#)).

Figure 3-1 Live View Shortcut Menu

Menu items include:

- **Single Camera:** Switch to a full-screen display of the selected camera by drop-down submenu.
- **Multi Camera:** Switch between different multi-camera display modes by drop-down submenu.
- **Next Screen:** When displaying less than the maximum number of cameras in Live View, select this option to switch to the next camera display.
- **Playback:** Enter Playback mode of the selected camera.
- **PTZ:** Enter PTZ control mode of the selected camera.
- **Digital Zoom:** Enter Digital Zoom interface of the selected camera.
- **Menu:** Enter Main menu.
- **Start Auto-switch:** Enable multi-camera sequence in Live View mode.

Note The dwell time of the Live View configuration should be set before using **Start Auto-switch** function.

Using the Digital Zoom

To use digital zoom in Live View mode:

1. Right-click the mouse in Live View mode, and then click **Digital Zoom**.
2. Drag the red box to the desired area for zooming.

The zoomed image will be magnified by 4 times (see [Figure 3-2](#)).

Figure 3-2 Digital Zoom

Configuring the Live View Display

Click **Menu** > **Settings** > **Display** to enter the Display Settings Menu (see [Figure 3-3](#)).

Figure 3-3 Display Settings Menu

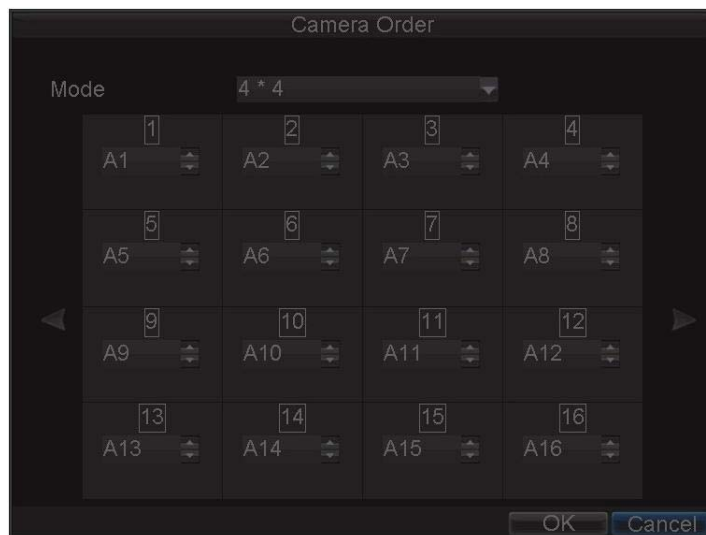

Configure the following settings:

- **Video Output:** Set the video output modes, including **VGA**, **Aux Output**, and **Main CVBS**.
- **Mode:** Set the live view display mode to be **1×1**, **2×2**, **3×3**, or **4×4**.
- **Dwell Time:** Set the dwell time for camera switching when **Start Auto-switch** is selected in Live View.
- **Camera Order:** Set the camera order for display in the selected mode (see [Setting the Camera Order](#)).
- **Enable Audio Output:** Enable/disable audio output for the selected video output.
- **Event Output Port:** Set the port for event output to be **VGA**, **Main CVBS**, or **Aux Output**.
- **Event Dwell Time:** Set the dwell time for event video display.

Setting the Camera Order

The Camera Order settings allow you to set camera sequence in selectable Live View display mode (see [Figure 3-4](#)).

Figure 3-4 Camera Order Settings

To set the camera order, do the following:

1. Click **Menu** > **Settings** > **Display** to enter the Display Settings menu.
2. Next to **Camera Order**, click **Set**.
3. Select the video output port and the display mode (**1×1**, **2×2**, **3×3**, and **4×4** selectable).
4. Use the direction buttons on the front panel of the DVR to move to the display pane for setting, and then press **←** to confirm the selection.
5. Use the direction buttons on the front panel of the DVR to select the camera you want to be view in the display pane.
The option 'x' indicates that no camera is displayed.
6. Press **←** to confirm the selection.

4

Recording Settings

This chapter explains how to configure recording settings for the HRG DVR, including setting scheduled recording.

Configuring Recording Settings

There are multiple ways to set up your HRG DVR for recording. These include setting up a recording schedule, triggering a recording by motion detection and/or a sensor alarm, and starting a recording manually.

Initializing Recording Settings

1. Click **Menu** > **Settings** > **Record** to enter the Record Settings menu (see [Figure 4-1](#)).

Figure 4-1 General Record Settings Menu

2. Select the camera you want to configure.

3. Configure the following settings:
 - **Encoding Parameters:** Set the encoding parameters to be **Normal** or **Event**.
 - **Stream Type:** Set the stream type to be **Video** or **Video & Audio**.
 - **Resolution:** Set recording resolution at **4CIF**, **2CIF**, **CIF**, or **QCIF**.
 - **Bit Rate Type:** Set the bit rate type to be **Variable** or **Constant**.
 - **Video Quality:** Set the recording video quality (6 levels configurable).
 - **Frame Rate:** Set the frame rate of recording.
 - **Max Bit Rate:** Select or customize the maximum bit rate for recording.
4. Next to **More Settings**, click **Set** to configure more recording settings (see [Figure 4-2](#)).

Figure 4-2 More Record Settings

- **Pre-Record:** Set the time in seconds to pre-record before the actual recording begins.
 - **Post-Record:** Set the time in seconds to post-record after the actual recording has ended.
 - **Recording Expired Time:** Set the expiration time in days for recorded video. Recorded files after expiration time will be deleted. The actual period for record files storage is determined by the available HDD space.
 - **Record Audio:** Enable or disable audio recording of the selected camera.
5. Press the **3DEF/F2** button on the front panel of the HRG DVR to select the **Advanced** tab. The Advanced Record Settings menu is displayed (see [Figure 4-3](#)).

Figure 4-3 Advanced Record Settings

6. Next to **Overwrite**, select **Yes** or **No** to enable or disable the overwrite setting. Enabling the overwrite setting causes recorded files to be overwritten once the HDD is full.
7. Click **Apply**, and then click **OK** to exit the menu.

Scheduling Recording

The Schedule Record Settings menu allows you to set up flexible recording schedules for daily or weekly recording.

To set up a recording schedule:

1. Click **Menu** > **Settings** > **Record** to enter the Record Settings menu.
2. Select the **Schedule** tab to enter the Schedule Record Settings menu (see [Figure 4-4](#)).

Figure 4-4 Schedule Record Settings Menu

3. Select the camera for which you want to configure a recording schedule.
4. Click **Edit** to enter the Schedule Settings menu.

5. Select the **Enable Schedule** check box.
6. Select the day you want to record or select **All Week** to record the entire week.
7. Click **All Day** to enable recording for the entire day, or select different periods for each day. Up to eight time periods can be scheduled.

Note Scheduled time periods cannot be overlapped.

8. Select the recording type.
The recording type can be selected to scheduled or triggered by motion detection and/or alarm. For more specific settings about motion detection and alarm recordings, please refer to [Configuring Alarms on page 59](#).
9. Click **OK**.
10. Repeat [step 3](#) to [step 9](#) for other cameras, or copy settings from one schedule to the others under **Copy To**.
11. Click **OK** to save the settings.

Note The Event encoding parameters will take effect when motion detection or alarms are triggered. The Timing encoding parameters will take effect when there no events are occurring.

Starting a Manual Recording

A manual recording can be enabled at any time by means of the following configuration:

1. Click **Menu** > **Manual Record** to enter the Manual Record menu (see [Figure 4-5](#)).

Figure 4-5 Manual Record Menu

2. Start manual recording by selecting **ON** or **OFF** for each camera.

Protecting Recorded Files

Two methods are provided to prevent recorded files from being deleted from the HDD or from being overwritten during cycle recording. You can set the recorded files to be locked or you can set the HDD that the files reside on to be read-only.

Locking and Unlocking Recorded Files

To lock or unlock a recorded file:

1. Click **Menu** ► **Video Search** to enter the Video Search menu (see [Figure 4-6](#)).

Figure 4-6 Video Search Menu

2. Search for the desired recording by entering search parameters.
Search parameters include Camera ID, Video/File Type, and Start/End Time.
3. Click **Search**.
A list of recorded files (see [Figure 4-7](#)) matching the search parameters are displayed.

Figure 4-7 Video Search Result List

4. Select the file you want to lock/unlock.
5. Click **Lock** to lock the file. If the file is already locked, click **Unlock** to unlock file.
Locked files are shown with a closed lock, while unlocked files are shown with an opened lock.
6. Click **Cancel** to exit the menu.

Setting the Hard Drive to Read-Only

To set a HDD to read-only:

1. Click **Menu** > **HDD** to enter the HDD Management menu (see *Figure 4-8*).

Figure 4-8 HDD Management Menu

2. Select the **General** tab.
3. Select the HDD to set to read-only.
4. Click **Property** to enter the Property Settings menu (see *Figure 4-9*).

Figure 4-9 HDD Property Settings Menu

5. Set the **HDD Status** to **Read-only**, and then click **OK** to save the settings.

Note Once set to read-only, the HDD cannot be written to until it is set back to read/write (**R/W**).

Note For models installed with one HDD only, when the property is set to read-only, the recording of the device will be stopped.

5

Playback

This chapter describes the playback controls and the various methods of playing back recorded video, including playback from a search and playing back frame-by-frame.

Video Playback

The Client application allows all users to play back record files of the specified period. Multi-camera simultaneous playback is supported.

Playback Interface

Multiple toolbar and buttons are provided on the Playback interface to control the video playback (see [Figure 5-1](#)).

Figure 5-1 Playback Interface

The Playback Control panel (see [Figure 5-2](#)), provides various control buttons for video playback.

Figure 5-2 Playback Control Panel

Note A blue bar ■ refers to the *Normal* recording (scheduled, manual), while the red bar ■ indicates *Event* recording.

Playback by Search

To play back record files by video search:

1. Click **Menu** ► **Video Search** to enter the Video Search menu.
2. Set the search parameters by selecting which cameras to search, the video type, the file type, and the start and end times (see [Figure 5-3](#)).

Figure 5-3 Video Search Menu

3. Click **Play** to start playback of all files found, or click **Search** to see a list of search results.
4. Select the file you want to play back, and then press **Play**.
Recorded files will automatically be played back in the Playback interface (see [Figure 5-4](#)).

Figure 5-4 Playback Interface

Playback in Live View Mode

The Client application also allows you to play back recorded files in Live View mode.

To play back by channel in Live View mode:

1. Right-click on the desired channel, and then click **Playback**.
Recorded video from the selected channel will start playing back in the Playback window. An **Attention** message will appear if there are no recordings found in the previous five minutes.
2. Optionally, you can select additional channels for play back from the channel list on the right side of the Playback interface (see [Figure 5-5](#)).

Figure 5-5 Playback Interface

Multi-camera Playback

1. Select the cameras from the list for which you want simultaneous playback.
2. Click  to stop the ongoing video playback.
3. Click  to start multi-camera simultaneous playback.

Note

- Up to 16 cameras can be played back simultaneously.
- The camera list operation is accessible by mouse only. Please do not operate by front panel.
- If the camera numbered the lowest among the multiple cameras selected for simultaneous playback provides no recorded files for the current day selected on the calendar, then the warning message Playback failed will be displayed on the screen.
- The video for simultaneous playback by multiple cameras selected from the camera list refers to the all-day recorded files of the selected day.

Playback by System Log

To play back video from the System Log:

1. Click **Menu** > **Maintenance** > **Log Search** to enter the Log Search menu (see [Figure 5-6](#)).

Figure 5-6 Log Search Menu

2. Set **Major Type** to **Information**, set **Minor Type** to **Start Record** or **End Record**, and then select the **Start Time** and **End Time**.
3. Click **Search**.
A list of search results is displayed.
4. Select the video log to play back, and then click **Play**.
The selected recording will begin to play in the Playback interface.

Playback Frame-by-Frame

To play back frame-by-frame in the Playback interface:

Using a Mouse

1. Click **Slow Forward** on the Playback Control Panel until the speed changes to single frame.
2. Click **Pause** to advance the video frame by frame.

Using the Front Panel/Remote Control

1. Press the down arrow to change the playback speed to single frame.
2. Press **↵** (Enter) to advance the video frame by frame.

Digital Zoom

To use digital zoom in Playback mode:

1. Right-click the mouse in Playback mode.
2. Click **Digital Zoom** in the drop-down submenu.
3. Drag the red box to the desired area for zooming.
The zoomed image will be magnified by 4 times (see [Figure 5-7](#)).

Figure 5-7 Digital Zoom in Playback Mode

6

Backup

This chapter describes how to back up recorded files, including exporting files and video clips.

Backing Up Recorded Files

Recorded files can be backed up to various devices, such as USB flash drives, USB hard drives, or a DVD writer.

Exporting Files

To export recorded files:

1. Click **Menu** ► **Video Export** to enter the Record Backup menu (see [Figure 6-1](#)).

Figure 6-1 Record Backup Menu

2. Select the desired parameters to search for recorded files to export.
3. On the toolbar, click **Export**.
A list of video search results is displayed (see [Figure 6-2](#)).

Figure 6-2 Video Search Results

CH.	Start Time	Stop Time	Size
<input checked="" type="checkbox"/> A1	06-24-2010 13:36:18	13:44:19	9,045KB
<input checked="" type="checkbox"/> A1	06-29-2010 16:33:38	16:35:47	1,476KB
<input checked="" type="checkbox"/> A1	06-29-2010 16:37:09	16:39:10	1,670KB
<input checked="" type="checkbox"/> A1	06-29-2010 16:51:17	16:51:37	309KB
<input checked="" type="checkbox"/> A1	06-29-2010 17:52:11	17:52:26	569KB

<input checked="" type="checkbox"/> A1	06-29-2010 17:58:51	17:59:05	496KB

Total Size: 69.29GB

4. Select the recorded files you want to export. You can also click **Play** to confirm the recorded file you want to export.

The size of the currently selected files is displayed at the lower-left corner of the window.

5. Click **Next** to enter the Export menu (see [Figure 6-3](#)).

Figure 6-3 Export Menu

6. Select the device to which the record file is to be exported from drop-down list (USB Flash Drive, USB HDD, DVD Writer).
7. If the backup device is not recognized:
 - Click **Refresh**.
 - Reconnect the device.
 - Check for compatibility from vendor (see [Troubleshooting the HRG DVR on page 113](#)).
8. Click **Start** to begin the backup process (see [Figure 6-4](#)).

Figure 6-4 Backup Progress Screen

9. After the backup process has completed (*Figure 6-5*), select a file from your device and click **Play** to verify that it has been exported successfully.

Figure 6-5 Export Successful Screen

Note Video Player software will automatically be copied to the device that the recorded files were exported to.

Exporting Video Clips

You can select video clips to export directly in Playback status. A maximum of 30 clips can be selected for each channel.

Exporting Video Clips Using the Mouse

To export video clips during Playback using the mouse:

1. Enter the Playback interface (see [Video Playback on page 47](#)).
2. Click **Start/Stop Clip** on the Playback Control Panel (see [Figure 5-2](#)), and select the start and end of the video clip during playback. Repeat for additional clips.
3. Click **Quit Playback** to exit the Playback interface. You are then prompted to save the clips (see [Figure 6-6](#)).

Figure 6-6 Save Video Clips Prompt

4. Click **Yes** to enter the Backup interface, or click **No** to exit the Playback interface.
5. In the Backup interface, click **Start** to begin the backup process.

Exporting Video Clips Using the Front Panel/Remote

To export video clips during Playback using the Front Panel/Remote:

1. Enter the Playback interface (See [Video Playback on page 47](#)).
2. During playback, press **Edit** to mark the start of the clip.
3. Press **Edit** again to mark the end of the clip.
4. Repeat steps 2 and 3 for additional clips.
5. Press the **ESC** button to exit the Playback interface. You will then be prompted to save the clips (see [Figure 6-6](#)).
6. Click **Yes** to enter the Backup interface, or click **No** to exit the Playback interface.
7. In the Backup interface, click **Start** to begin the backup process.

Managing Backup Devices

To manage backup devices, you must first be in the Export menu (see [Figure 6-7](#)). The Export menu can be accessed by following the steps shown in the section [Exporting Files](#).

Figure 6-7 Export Menu

From the Export menu, you can select the following options:

- **New Folder:** Create a new folder on the export device.
- **Delete:** Delete a file or folder from the export device.
- **Play:** Play the selected video file on the export device.
- **Format:** Format the export device.
- **Erase:** Erase files from a re-writable CD or DVD.

Alarm Settings

This chapter describes how to configure the HRG DVR to detect and respond to alarms.

Configuring Alarms

Motion Detection Alarm

To configure Motion Detection recording, do the following:

1. Click **Menu** > **Settings** > **Camera** to enter the Camera Settings menu (see [Figure 7-1](#)).

Figure 7-1 Camera Settings Menu

2. Select the **Advanced** tab to enter the Advanced Camera Settings menu (see [Figure 7-2](#)).

Figure 7-2 Advanced Camera Settings - Motion Detection

3. Select the **Motion Detection** check box, and then click **Area Settings** to enter the Motion Detection Area Settings interface.
4. Mask the Motion Detection area by dragging the grid with your mouse (see [Figure 7-3](#)). The maximum area can be set to full screen. You can also use the **EDIT** and direction buttons on the front panel of the HRG DVR to configure the Motion Detection area.

Figure 7-3 Motion Detection Area Settings Interface

5. Right-click anywhere in the window or press **MENU** on the front panel of the DVR to set the Motion Detection Sensitivity (see [Figure 7-4](#)). The higher the value, the higher the sensitivity level.

Figure 7-4 Motion Detection Sensitivity Settings

6. Click **OK** to return to the Motion Detection Area Settings interface.
7. Right-click anywhere in the window, and then click **Exit** to return to the Advanced Camera Settings menu.
8. Click **Handle** to enter the Exception Handle menu (see [Figure 7-5](#)).

Figure 7-5 Exception Handle Menu

9. Select cameras to trigger for recording when motion is detected by selecting the check boxes under the desired cameras.
10. Select the **Schedule** tab to set when you want motion detection to be enabled (see [Figure 7-6](#)). The schedule can be set for all week or any day of the week, with up to eight time periods per day.

Figure 7-6 Schedule Settings

Note After you have configured the schedule, the HRG DVR must be restarted for the new settings to take effect.

11. Select the **Handle** tab to configure exceptions handling (see [Figure 7-7](#)). Exception trigger options are described in [Understanding Exception Trigger Options on page 71](#).

Figure 7-7 Handle Settings

12. Click **OK** to save the settings for the selected camera.
 You can now add a schedule to start recording when motion is detected (see [Scheduling Recording on page 41](#)).

Sensor Alarm Settings

Recordings can be triggered from an external relay alarm device.

To set up sensor alarms:

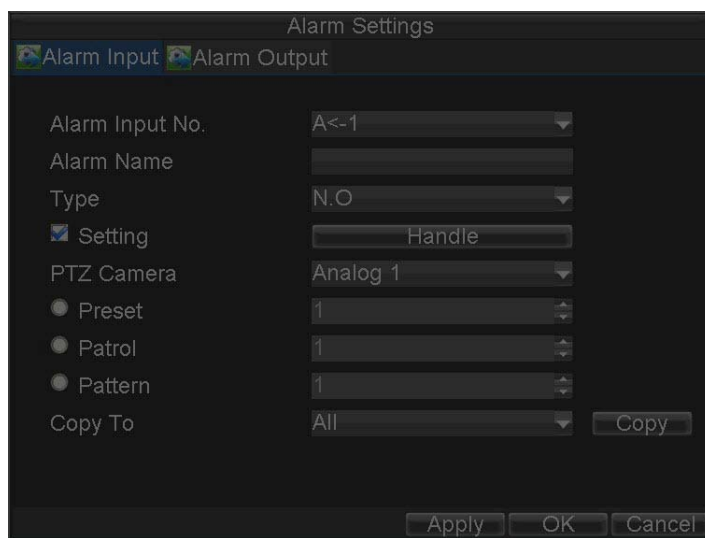

1. Click **Menu > Settings > Alarm** to enter the Alarm Settings menu (see [Figure 7-8](#)).

Figure 7-8 Alarm Settings Menu

2. Select the **Alarm Input Number**, and then click **Set** to enter the Alarm Input Settings menu (see [Figure 7-9](#)).

Figure 7-9 Alarm Input Settings Menu

3. Set **Type** to Normally Opened (**N.O.**) or Normally Closed (**N.C.**).
4. Select the **Setting** check box, and then click **Handle** to enter the Alarm Input Handle menu (see [Figure 7-10](#)).

Figure 7-10 Alarm Input Handle Menu

5. Select the **Triggered Camera** tab.
6. Select cameras to trigger for recording when an alarm occurs by selecting the check boxes under the desired cameras (see [Figure 7-10](#)).
You can select a PTZ camera to link with the alarm input and then set the call up of preset, patrol, and pattern for alarm-linked actions.
7. Click **OK** to save the settings.
8. You can now add a schedule to start recording when an alarm is triggered (see [Scheduling Recording on page 41](#)).

Alarm outputs can also be configured in the Alarm Settings menu.

To set up an Alarm Output:

1. Select the **Alarm Output** tab to enter the Alarm Output interface (see [Figure 7-11](#)).

Figure 7-11 Alarm Output Interface

2. Select the output you want to configure, and then click **Set** to enter the settings page for the selected channel (see [Figure 7-12](#)).

Figure 7-12 Alarm Output Settings

3. Configure the settings for the selected output.
4. Click **OK** to save the settings.

Note If **Hold For** is set as **Manually Stop**, the alarm will only stop when you manually turn it off (see [Manual Alarm Triggering](#)).

Manual Alarm Triggering

You can trigger alarm outputs manually through the Manual Alarm menu.

To trigger alarm outputs manually:

1. Click **Menu** ► **Manual Alarm** to enter the Manual Alarm menu (see [Figure 7-13](#)).

Figure 7-13 Manual Alarm Menu

2. Configure the following settings in the Manual Alarm menu:
 - **Trigger:** Select an alarm from the list and click **Trigger** to trigger its output.
 - **Trigger All:** Trigger all alarm outputs at once.
 - **Clear All:** Stop all alarm outputs at once.
3. Click **OK** to save the settings.

Video Loss Detection

The DVR can be set up to detect video loss and trigger an action.

To set up video loss detection:

1. Click **Menu** > **Settings** > **Camera** to enter the Camera Settings menu (see [Figure 7-14](#)).

Figure 7-14 Camera Settings Menu

2. Select the **Advanced** tab to enter the Advanced Camera Settings menu.
3. Select the camera to be configured with video loss detection.
4. Select the **Video Loss Detection** check box to enable this feature (see [Figure 7-15](#)).

Figure 7-15 Advanced Camera Settings - Video Loss Detection

5. Next to **Video Loss Detection**, click **Handle** to enter the Exception Handle menu.
6. Select the **Schedule** tab to set when you want video loss detection to be enabled (see [Figure 7-16](#)). The schedule can be set for all week or any day of the week, with up to eight time periods per day.

Figure 7-16 Schedule Settings

Note After you have configured the schedule, the HRG DVR must be restarted for the new settings to take effect.

7. Select the **Handle** tab to configure exceptions handling (see [Figure 7-17](#)). Exception trigger options are described in [Understanding Exception Trigger Options on page 71](#).

Figure 7-17 Handle Settings

8. Click **OK** to save the settings.
9. Repeat [step 3](#) to [step 8](#) to configure settings for other channels.

Video Tampering Detection

The video tampering can also be detected and set to trigger an action on your DVR.

Note The video tampering detection area is in full-screen mode by default and cannot be configured.

To set up video tampering detection:

1. Click **Menu > Settings > Camera** to enter the Camera Settings menu (see [Figure 7-18](#)).

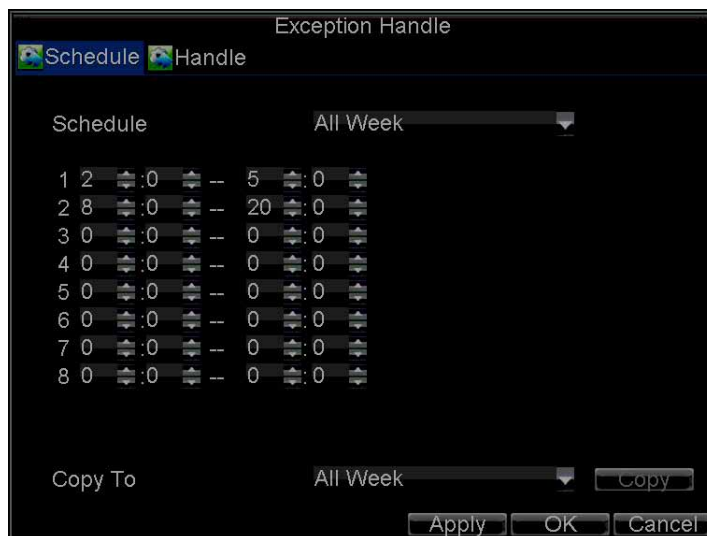

Figure 7-18 Camera Settings Menu

2. Select the **Advanced** tab to enter the Advanced Camera Settings menu.
3. Select the camera to be configured with video tampering detection.
4. Select the **Tamper Detection** check box to enable this feature (see [Figure 7-19](#)).

Figure 7-19 Advanced Camera Settings - Tamper Detection

5. Next to **Tamper Detection**, click **Handle** to enter the Exception Handle menu.
6. Select the **Schedule** tab to set when you want video tampering detection to be enabled (see [Figure 7-20](#)). The schedule can be set for all week or any day of the week, with up to eight time periods per day.

Figure 7-20 Schedule Settings

Note After you have configured the schedule, the HRG DVR must be restarted for the new settings to take effect.

7. Select the **Handle** tab to configure exceptions handling (see [Figure 7-21](#)). Exception trigger options are described in [Understanding Exception Trigger Options on page 71](#).

Figure 7-21 Handle Settings

8. Click **OK** to save the settings.
9. Repeat [step 3](#) to [step 8](#) to configure settings for other channels.

Exception Settings

The exception setting allows the DVR to alert you when irregular events occur. These events include:

- **HDD Full:** All installed hard drives are full.
- **HDD Error:** Errors occurred during writing of the hard drive(s), no hard drive is installed, or the hard drive(s) failed to initialize.
- **Network Disconnected:** Disconnected network cable.
- **IP Conflict:** Conflict in IP address setting.
- **Illegal Login:** Incorrect user ID or password used.
- **Video Output Standard Mismatch:** Video output standards do not match each other.

To set exceptions:

1. Click **Menu** > **Settings** > **Exception** to enter the Exception menu.
2. Under **Exception Type**, select the exception that you want to configure.
3. Select triggering options (see [Figure 7-22](#)).

Figure 7-22 Exception Menu

Understanding Exception Trigger Options

When setting up exception handles for such features as motion detection and relay alarms, you can select triggering options to alert you of these exceptions.

The triggering options include:

- **Pop-up Image on Monitor:** When an alarm is triggered, the local monitor (VGA or BNC monitor) will display an image in Live View mode. This alarm can be configured under the Popup Alarm Image handle method. For alarms that are triggered simultaneously, images will be displayed one at a time every 10 seconds (default dwell time). A different dwell time can be set by going to **Menu > Settings > Display > Dwell Time**. Once the alarm stops, cycling of the images will also stop and you will be returned to the Live View screen.
- **Audio Warning:** Trigger an audible beep when exception is detected.
- **Notify Surveillance Centre:** Sends a signal to remote alarm host when exception is detected (see [Configuring Remote Alarm Host Settings on page 77](#)).
- **Trigger Alarm Output:** Trigger an alarm output when an exception is detected. Alarm output can be configured by following the steps listed in [Sensor Alarm Settings](#).

8

Network Settings

This chapter covers how to configure network settings.

Configuring Network Settings

The network settings must be configured if the HRG DVR is used for monitoring over a network.

Configuring General System Settings

To configure the general network settings:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu (see [Figure 8-1](#)).

Figure 8-1 Network Settings Menu

2. Select the **General** tab. Configure the settings on the interface.

3. If you want to configure your own settings, enter the settings for:
 - **IP Address:** IP address you would like to use for your HRG DVR.
 - **Subnet Mask:** Subnet Mask of network.
 - **Default Gateway:** IP address of your Gateway. Typically the IP address of your router.
 - **Preferred/Alternate DNS Server:** The preferred and alternate Domain Name System (DNS) Server to be used with your HRG DVR.
4. If you have a DHCP server running and would like your DVR to automatically obtain an IP address and other network settings from that server, select the DHCP check box. You can check the DHCP status by going to the Network Status tab (see [Figure 8-2](#)).

Figure 8-2 Network Status

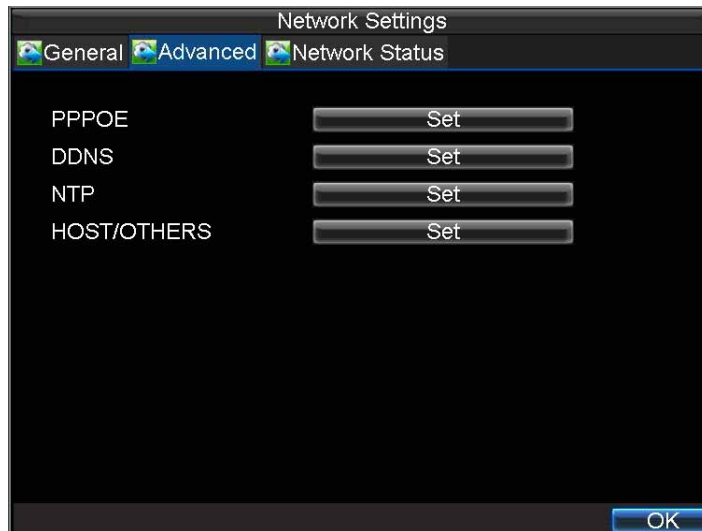

5. Click **OK** to save the settings and exit the menu.

Configuring PPPoE Settings

Your DVR also allows for Point-to-Point Protocol over Ethernet (PPPoE) access.

To set up PPPoE access:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu.
2. Select the **Advanced** tab to enter the Advanced Network Settings menu (see [Figure 8-3](#)).

Figure 8-3 Advanced Network Settings Menu

3. Click **Set** next to **PPPOE** to enter the PPPoE Settings menu (see [Figure 8-4](#)).

Figure 8-4 PPPoE Settings

4. Select the **PPPOE** check box to enable this feature.
5. Fill in the **User Name**, **Password**, and **Confirm Password** boxes, and then click **OK**.
PPPOE credentials can be obtained from your network administrator. Once the setup is completed, your DVR will automatically dial-up into your network after reboot.
6. Click **OK** to save the settings and exit the menu.
You may be asked to restart your HRG DVR for the settings to take effect. To check on the status of your PPPoE connection, go to **Menu > Settings > Network** and select the **Network Status** tab.

Configuring DDNS

If your DVR is set up to use PPPoE as its default network connection, you can set up Dynamic DNS (DDNS).

To set up DDNS:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu.
2. Select the **Advanced** tab.
3. Next to **DDNS**, click **Set** to enter the DDNS settings menu (see [Figure 8-5](#)).

Figure 8-5 DDNS Settings Menu

4. Select the **DDNS** check box to enable this feature.
5. Select the **DDNS Type**.

Three different DDNS types are selectable: **IpServer**, **PeanutHull**, and **DynDNS**.

- **IpServer:** Enter the **Server Address** for IpServer (see [Figure 8-5](#)).
- **PeanutHull:** Enter the **User Name** and **Password** obtained from the PeanutHull website (see [Figure 8-6](#)).
- **DynDNS:** Enter the **Server Address** for DynDNS (*members.dyndns.org*). Under DVR Domain Name, enter the domain obtained from the DynDNS web site. Then enter the **User Name** and **Password** registered in the DynDNS network.

Figure 8-6 DynDNS Settings

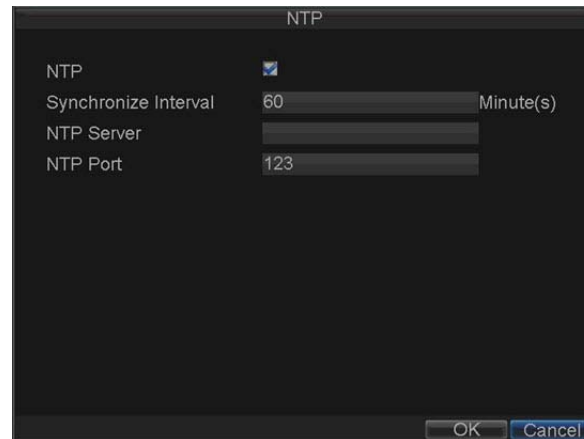

Configuring NTP Server Settings

A Network Time Protocol (NTP) Server can be set up on your HRG DVR to maintain the current date and time.

To set up an NTP server:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu.
2. Select the **Advanced** tab.
3. Next to **NTP**, click **Set** to enter the NTP Settings menu (see [Figure 8-7](#)).

Figure 8-7 NTP Settings Menu

4. Select the **NTP** check box to enable this feature.
5. Configure the NTP settings:
 - **Synchronize Interval:** Time in minutes to synchronize with the NTP server.
 - **NTP Server:** Address of the NTP server.

Note The address can be set to the IP address or the domain name. When the domain name is used, please set the DNS server address.

6. Click **OK** to save the settings and exit the menu.

Note Time synchronization interval has a range of 0 to 10080 min, normally 7200 min. If the DVR is used on a public network, you should use an NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the DVR is set up in a more customized network, NTP software can be used to establish an NTP server used for time synchronization.

Configuring Remote Alarm Host Settings

With a remote alarm host set, the HRG DVR will send a signal to the host when an alarm is triggered. The remote alarm host must have the Network Video Surveillance software installed.

To set up a remote alarm host:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu.
2. Select the **Advanced** tab.
3. Next to **Host/Others**, click **Set** to enter the Host/Others menu (see [Figure 8-8](#)).

Figure 8-8 Host/Others Menu

Field	Value
Alarm Host IP	
Alarm Host Port	0
Server Port	8000
HTTP Port	80
Multicast IP	239 . 255 . 255 . 255

4. Enter the **Alarm Host IP** and **Alarm Host Port**.

Alarm Host IP is the IP of the remote PC that has the Network Video Surveillance software installed. The Alarm Host Port must be the same as software's alarm monitor port (default port is 7200).

Configuring Multicast

Setting up multicasting solves limitation issues when streaming video through a network access device. A multicast address spans the Class-D IP range of 224.0.0.0 to 239.255.255.255. It is recommended to use the IP address range from 239.252.0.0 to 239.255.255.255.

To set up multicasting:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu.
2. Select the **Advanced** tab.
3. Next to **Host/Others**, click **Set** to enter the Host/Others menu.
4. Set **Multicast IP** (see [Figure 8-9](#)).

When adding a device to the Network Video Surveillance software, the multicast address must be the same with the DVR's multicast IP.

Figure 8-9 Host/Others Menu

Field	Value
Alarm Host IP	
Alarm Host Port	0
Server Port	8000
HTTP Port	80
Multicast IP	239 . 255 . 255 . 255

5. Click **OK** to save the settings and exit the menu.

Configuring Server and HTTP Ports

If you would like to change the server and HTTP ports from the default settings, you can do so in the Network Settings menu. The default server port is 8000 while the default HTTP port is 80.

To change the default ports:

1. Click **Menu** > **Settings** > **Network** to enter the Network Settings menu.
2. Select the **Advanced** tab.
3. Next to **Host/Others**, click **Set** to enter the Host/Others menu.
4. Enter new **Server Port** and **HTTP Port** (see [Figure 8-10](#)).

Figure 8-10 Host/Others Menu

Note The Server Port has a port range of 2000 to 65535 and is used for remote client software access. The HTTP port is used for remote Internet browser access.

9

PTZ Control

This chapter describes how to configure and use the HRG Performance Series DVR to control PTZ Dome cameras in your network system.

Navigating the PTZ Menu

PTZ menus can be navigated using either the mouse or the front panel/remote. For quick access to certain PTZ settings, click the right mouse button in Live View mode, and then click **PTZ** to enter PTZ control mode (see [Using the Mouse in Live View on page 34](#)). While in PTZ control mode, right-click anywhere in the window to see the PTZ menu (see [Figure 9-1](#)).

Figure 9-1 PTZ Menu

Menu items include:

- **Camera:** Select a PTZ camera.
- **Call Preset:** Call a PTZ preset.
- **Call Patrol:** Call a PTZ sequence.
- **Call Pattern:** Call a PTZ pattern.
- **Preset Settings:** Enter PTZ preset configuration menu.
- **Patrol Settings:** Enter PTZ sequence configuration menu.
- **Pattern Settings:** Enter PTZ pattern configuration menu.
- **PTZ Menu:** Enter PTZ control menu.
- **PTZ Settings:** Enter PTZ settings menu.

Configuring PTZ Settings

Settings for a PTZ camera must be configured before it is used. Before proceeding, verify that the PTZ and RS-485 of the DVR are connected properly.

To configure PTZ settings:

1. Click **Menu** > **Settings** > **PTZ** to enter the PTZ Settings menu (see [Figure 9-2](#)).

Figure 9-2 PTZ Settings Menu

The screenshot shows a 'PTZ Settings' dialog box with the following fields and values:

Field	Value
Camera	Analog 1
Baudrate	9600
Data Bit	8
Stop Bit	1
Parity	None
Flow Ctrl	None
PTZ Protocol	
Address	0
Copy To	All

Buttons at the bottom: Default, Apply, OK, Cancel. A Copy button is next to the Copy To field.

2. Next to **Camera**, select the channel where PTZ camera is installed.
3. Set the **Baudrate**, **Data Bit**, **Stop Bit**, **Parity**, **Flow Control**, **PTZ Protocol**, and **Address**.
4. Click **OK** to save the settings and exit the menu.

Note All setting parameters (baud rate, data bit, stop bit, parity, flow control, PTZ protocol and address) must be consistent with the PTZ camera connected.

Setting PTZ Presets, Patrols and Patterns

The HRG DVR allows you to program presets, patrols, and patterns for a connected PTZ camera.

Understanding PTZ Controls

The PTZ control panel provides a series of PTZ controls (see [Figure 9-3](#)).

Figure 9-3 PTZ Control Panel

The controls on the panel include:

1. **Directional Pad/Auto-scan Buttons:** Controls the movements and directions of the PTZ. The center button is also used to start the auto-scan of the PTZ.
2. **Zoom:** Used to zoom in and out with the PTZ.
3. **Focus:** Used to adjust the focus of the PTZ.
4. **Iris:** Used to open up or close the iris of the PTZ.
5. **Speed:** Adjusts the movement speed of the PTZ.
6. **Light:** Turns the PTZ light (if applicable) on and off.
7. **Wiper:** Turns the PTZ wiper (if applicable) on and off.
8. **Zoom In:** Instantly zooms the PTZ in.
9. **Center:** Centers the PTZ.

Customizing Presets

Presets can be set to move your PTZ camera to a desired preset location.

To set up and call custom PTZ presets:

1. Open the PTZ Control panel ([Figure 9-3](#)) by selecting **PTZ** in the right-click menu or by pressing **PTZ** on the front panel of the DVR.
2. Click **Preset** to enter the Preset Management menu.
3. In the Preset Management menu (see [Figure 9-4](#)) you can:
 - **Configure Preset:** Use the PTZ control panel to adjust the position of the preset. Select a Preset number and click **Set** to save preset location.
 - **Clear Preset:** Select a Preset number and click **Clear** to delete the preset. You can also click **Clear All** to delete all presets.
 - **Call Preset:** Select a Preset and click **Call**.

Figure 9-4 Preset Management Menu

Note Only valid presets can be called and deleted.

Customizing Patrols

Patrols can be programmed to move the PTZ to different key points and make it stay there for a defined duration before moving on to the next point. The key points are defined by presets which can be set by following the steps above in [Customizing Presets](#).

To set up and call PTZ patrols:

1. Open the PTZ Control panel ([Figure 9-3](#)), by clicking **PTZ** in the mouse menu or by pressing **PTZ** on the front panel of the DVR.
2. Click **Patrol** to enter the Patrol Management menu (see [Figure 9-5](#)).

Figure 9-5 Patrol Management Menu

3. In the Patrol Management menu, you can configure a patrol:
 - a. Select a **Patrol Number** to set.
 - b. Select valid presets (See [Customizing Presets](#)), and then click **Set** to enter the Patrol Configuration menu. A sequence should have at least two valid presets.
 - c. Set the **KeyPoint No.**, **Duration**, and **Speed** (see [Figure 9-6](#)).

The KeyPoint Number determines the order the PTZ will follow when cycling through the patrol. The Duration refers to the time span to stay at the corresponding keypoint. The Speed defines the rate at which the PTZ will move to the current preset.

Figure 9-6 Patrol Configuration Menu

4. Click **OK** to return to the Patrol Management menu and repeat [step 2](#) and [step 3](#) to configure other keypoints.
5. After all keypoints have been configured, click the defined **KeyPoint Number**, and then click **Add** to complete the setting.
6. Click **OK** to save the settings and exit the current menu.

To clear a PTZ patrol:

1. In the Patrol Management menu ([Figure 9-5](#)), select a valid Patrol Number.
2. Click **Clear** to delete the patrol.

To call a PTZ patrol:

1. In the Patrol Management menu ([Figure 9-5](#)), select a valid Patrol Number.
2. Click **Start** to call the patrol, and then click **Stop** to stop the patrol (see [Figure 9-7](#)).

Figure 9-7 Patrol Management Menu

Customizing Patterns

Patterns can be set up by recording the movement of the PTZ.

To set up and call PTZ patterns:

1. Open the PTZ Control panel ([Figure 9-3](#)), by clicking **PTZ** in the mouse menu or by pressing **PTZ** on the front panel of the DVR.
2. Click **Pattern** to enter the Pattern Management menu (see [Figure 9-8](#)).

Figure 9-8 Pattern Management Menu

3. Select a **Pattern Number**.
4. To record a new pattern, click **Run Record** to start recording the movements of the PTZ. Use the PTZ control panel to move the PTZ. The PTZ movements are recorded until **Stop Record** is clicked.
5. To run a pattern, click **Run Pattern** on a valid pattern. The PTZ moves according to the path that was defined until **Stop Pattern** is clicked.
6. Click **OK** to exit the menu.

10

Camera Management

This chapter covers OSD settings, image settings, and privacy mask settings.

OSD Settings

Use the Camera Management menu to configure on-screen display (OSD) settings. The OSD is shown in each display during Live View mode and includes the time and date as well as the camera name.

To configure OSD settings:

1. Click **Menu > Settings > Camera** to enter the Camera Settings menu (see [Figure 10-1](#)).
2. Select the channel to set up the OSD settings in the **Camera** drop-down list and then click **Set**.
3. Configure the desired OSD settings (see [Figure 10-1](#)).

Figure 10-1 Camera Settings Menu

4. Click **Set** to modify the OSD display position, including the camera name position and the date/time display position.

Image Settings

Image settings such as the brightness, contrast, saturation and hue can also be adjusted in the Camera Management menu.

To adjust image settings:

1. Click **Menu** > **Settings** > **Camera** to enter the Camera Settings menu (see [Figure 10-1](#)).
2. Select the **Advanced** tab to enter the Advanced Camera Settings menu (see [Figure 10-2](#)).

Figure 10-2 Advanced Camera Settings Menu

3. Select the channel for image settings in the **Camera** drop-down list.
4. Next to **Image Settings**, click **Set**.
5. Adjust the image settings (see [Figure 10-3](#)).

You can adjust brightness, contrast, saturation, and hue in the menu. The adjustments of image settings will affect the live images and the recorded images.

Figure 10-3 Image Settings

Privacy Mask Settings

You can set up privacy mask to mask off sensitive or private areas in the field of view of a camera.

To set up a privacy mask:

1. Click **Menu** > **Settings** > **Camera** to enter the Camera Settings menu.
2. Select the **Advanced** tab to enter the Advanced Camera Settings menu (see [Figure 10-4](#)). Select the channel for privacy mask settings in the **Camera** drop-down list.

Figure 10-4 Advanced Camera Settings Menu

3. Select the **Mask** check box to enable the feature.
4. Click **Area Settings** to enter the Area Settings menu.
5. Set the mask area (see [Figure 10-5](#)). You can configure up to four areas.

Figure 10-5 Setting Mask Area

6. Click **Exit** to save the settings and exit the Mask Area Settings interface.

11

Hard Drive Management

This chapter covers how to configure and manage the hard drive(s) of the HRG Performance Series DVR.

Managing Hard Drives

Initializing Hard Drives

A newly installed hard disk drive (HDD) must be first initialized before it can be used with your HRG DVR. Initializing the HDD will erase all data on it.

To initialize a HDD:

1. Click **Menu** ► **HDD** to enter the HDD Management menu (see [Figure 11-1](#)).

Figure 11-1 HDD Management Menu

2. Select the hard drive (HDD) that you want to initialize.
3. Click **Init**.

- Click **OK** to start the initialization process.
After the HDD has been initialized, the status of the HDD will change from **Abnormal** to **Normal**.

Setting HDD Groups

Your HRG DVR can separate multiple HDDs into groups. Video from specified channels can be recorded to a particular HDD group.

To set up an HDD group:

- Click **Menu** ► **HDD** to enter the HDD Management menu.
- Select the HDDs to be added to the group.
- Click **Group** to enter the Group Settings menu (see [Figure 11-1](#)).
- Set the HDD Group Number (see [Figure 11-2](#)).

Figure 11-2 HDD Group Settings Menu

- Click **OK** to save settings and exit the Group Settings menu.

Note By default, all HDDs belong to Group 1.

Setting HDD Status

You can change the behavior of your HDD by changing its status. The status of a HDD can be set to read-only or read/write (R/W).

Setting an HDD to Read-Only

A HDD can be set to read-only to avoid important recorded files from being overwritten when the HDD becomes full.

To set a HDD to read-only:

- Click **Menu** ► **HDD** to enter the HDD Management menu.
- Select the HDD to be protected.

3. Click **Property** to enter the Property Settings menu (see [Figure 11-3](#)).

Figure 11-3 HDD Property Settings Menu

4. Set HDD Status to **Read-Only**.
5. Click **OK** to save the settings and exit the current menu.

Note Once set to read-only, the HDD cannot be written to until it is set back to read/write (R/W).

Your DVR can be installed with one HDD only; therefore, when the property is set to read-only, the recording of the device will be stopped.

Checking HDD Status

You can check the status of the installed HDDs on your HRG DVR at any time.

To check the status of a HDD:

- Click **Menu** ► **HDD** to enter the HDD Management menu.
The status of your HDD is listed under the **Status** column.
 - A **Normal** or **Hibernate** status indicates that the HDD is in working order.
 - If the status is listed as **Abnormal** and has already been initialized, the HDD needs to be replaced. If the HDD is uninitialized, you need to initialize it before it can be used in your HRG DVR. Please see [Initializing Hard Drives on page 91](#) for further instructions.

Using the SMART Function

You can also view the SMART information of the installed HDD. SMART (Self-Monitoring, Analysis and Reporting Technology) is a monitoring system for hard disk drives to detect and report on various indicators of reliability in the hopes of anticipating failures.

To view SMART information of an HDD:

1. Click **Menu** ► **Maintenance** ► **Log Search** to enter the Log Search menu (see [Figure 11-4](#)).

Figure 11-4 Log Search Menu

2. Set the **Major Type** field to **Information**.
3. Set the **Minor Type** field to **HDD SMART**.
4. Enter the desired times in the **Start Time** and **End Time** fields.
5. Click **Search** to begin the log search.

A list of results similar to that of [Figure 11-5](#) are displayed.

Figure 11-5 Log Search Results

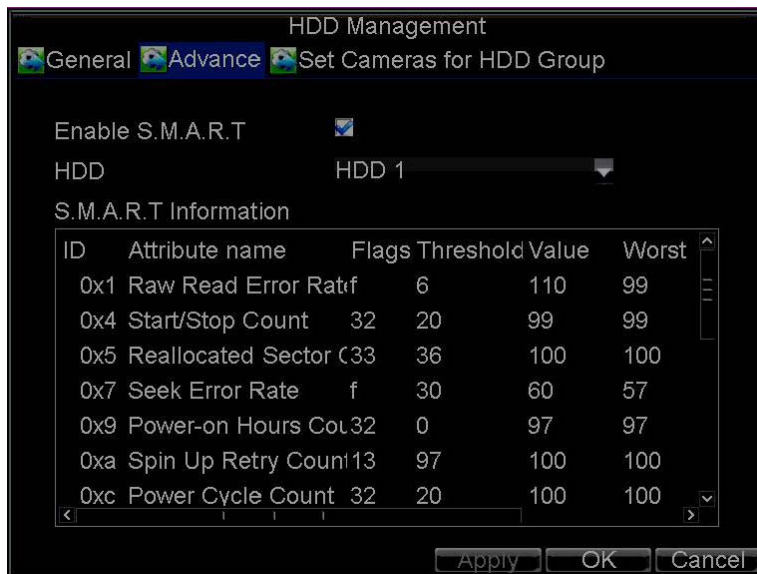

6. Select the log item to view and click **Details**.
A detailed list of SMART information will be displayed (see [Figure 11-6](#)).

Figure 11-6 HDD SMART Information

You can also click **Menu** > **HDD** to enter the HDD management menu (see [Figure 11-2](#)), and then select the **Advance** option to enter the SMART menu (see [Figure 11-7](#)). You can enable the SMART function and view the SMART information as well.

Figure 11-7 HDD SMART Menu

Configuring HDD Alarms

You can set HDD alarms to trigger when an HDD is uninitialized or in an abnormal state.

To set HDD alarms:

1. Click **Menu** > **Settings** > **Exception** to enter the Exception menu (see [Figure 11-8](#)).

Figure 11-8 Exception Menu, HDD Error

2. Set the **Exception Type** drop-down list to **HDD Error**.
3. Select the **Trigger Action Output** check box. Trigger actions are further explained in [Understanding Exception Trigger Options on page 71](#).

12

HRG DVR Management

This chapter describes how to configure system settings and manage user accounts. It also covers how to update system firmware, restore default settings, and view system information.

Configuring System Settings

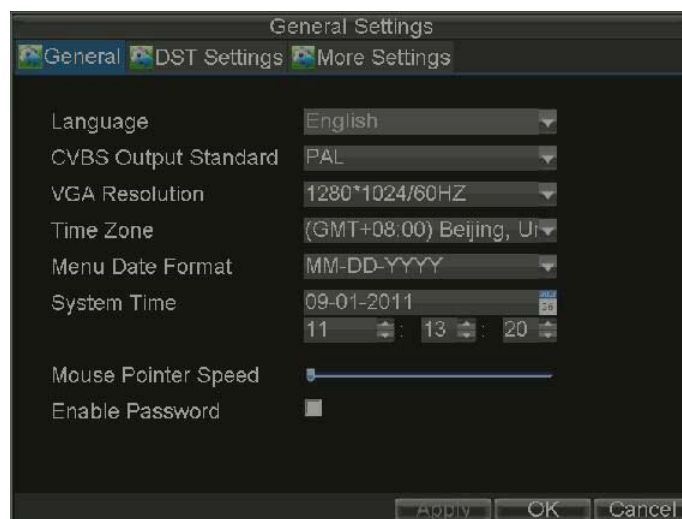

Configuring General Settings

Use the General Settings menu to configure general settings such as the system language.

To configure general settings:

1. Click **Menu** > **Settings** > **General** to enter the General Settings menu (see [Figure 12-1](#)).

Figure 12-1 General Settings Menu

2. Select the **General** tab.

3. Configure general settings, including:
 - **Language:** Default language used in all the HRG DVR menus.
 - **CVBS Output Standard:** Video output standard: NTSC and PAL.
 - **VGA Resolution:** VGA output resolution. 1024 × 768/60HZ and 1280 × 1024/60HZ resolution is selectable.
 - **Time Zone:** Time zone that you want the DVR to use.
 - **Menu Date Format:** Format for date.
 - **System Time:** System time and date.
 - **Mouse Pointer Speed:** Speed of mouse pointer.
 - **Enable Password:** Enable/disable system password.

Note If the video standard is different between the input and the output, you may notice flickering in Live View mode. After modifying the video standard, please reboot the DVR to validate the settings.

Configuring Advanced Settings

To configure more advanced system settings:

4. Click **Menu** > **Settings** > **General** to enter the General Settings menu (see [Figure 12-1](#)).
5. Select the **More Settings** tab to enter the More Settings menu (see [Figure 12-2](#)).

Figure 12-2 More Settings Menu

6. Configure the following settings:
 - **Device Name:** Name of the HRG DVR used.
 - **Device No.:** Device number of the HRG DVR.
 - **CVBS Output Brightness:** Video output brightness. Level 0 to 63 can be configurable.
 - **Transparency:** Menu transparency.
 - **Operation Timeout:** Set the timeout time for menu inactivity. For example, if timeout time was set to five minutes, after five minutes of inactivity in the General Settings menu, you are returned to the Live View.
 - **Output Hint:** Enable/disable video output hint for main or aux video output.
 - **Menu Output Mode:** Select the menu output mode to **Auto**, VGA/HDMI or CVBS. When **Auto** is selected, the system automatically detects whether the VGA/HDMI or CVBS interface is connected.
 - **Input Mode:** Set the video input mode to **Standard** or **Gentle**.

Setting the RS-232 Port

To configure RS-232 devices to be used with the DVR:

1. Click **Menu** ► **Settings** ► **RS232** to enter the RS-232 Settings menu (see [Figure 12-3](#)).

Figure 12-3 RS-232 Settings Menu

2. Configure the RS-232 settings.

3. The RS-232 port can be used in two ways:
 - **Parameter Control:** Connect a PC to the HRG DVR using the PC serial port. You can then set device parameters using software such as HyperTerminal. The serial port parameters must be the same as the DVR's when connecting with the PC serial port.
 - **Transparent Channel:** Connect a serial device directly to the HRG DVR. The serial device will be controlled remotely by the PC through the network and the protocol of the serial device.

Managing User Accounts

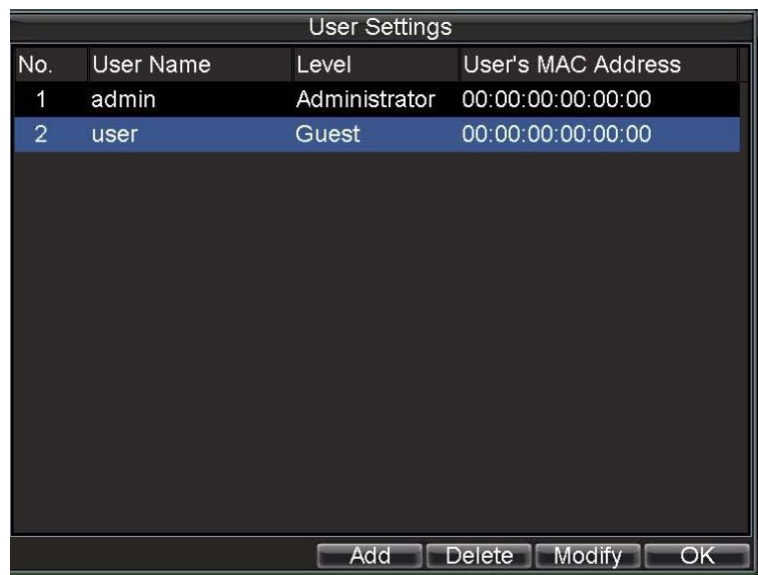

By default your Performance Series DVR is configured with the user name of **admin** and password **12345**. The Administrator has the authority to add, delete, or configure the user parameters.

Adding a New User

To add a new user:

1. Click **Menu** > **Settings** > **User** to enter the User Settings menu (see [Figure 12-4](#)).

Figure 12-4 User Settings Menu

No.	User Name	Level	User's MAC Address
1	admin	Administrator	00:00:00:00:00:00
2	user	Guest	00:00:00:00:00:00

Add Delete Modify OK

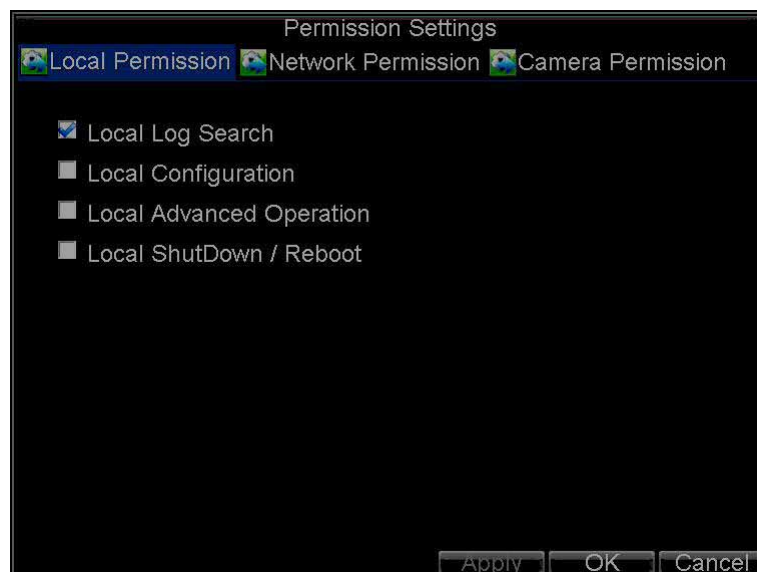

2. Click **Add** to enter the Add User menu (see [Figure 12-5](#)).
You can add up to 31 users.

Figure 12-5 Add User Menu

3. Enter information for the new user, including **User Name**, **Password**, **Level**, and **User's MAC Address**.
4. The **Level** is the user level and is separated into two tiers:
 - **Operator**: By default, the Operator user level has the authority to configure two-way audio in network settings and all parameters in channel settings.
 - **Guest**: By default, the Guest user level cannot configure network settings, but can configure the local playback as well as the remote playing in channel settings.
5. If the **User's MAC Address** is configured and enabled, the user may only access the HRG DVR from that particular MAC address.
6. Click **Permission** to enter the Permission Settings menu (see [Figure 12-6](#)).

Figure 12-6 Permission Settings Menu

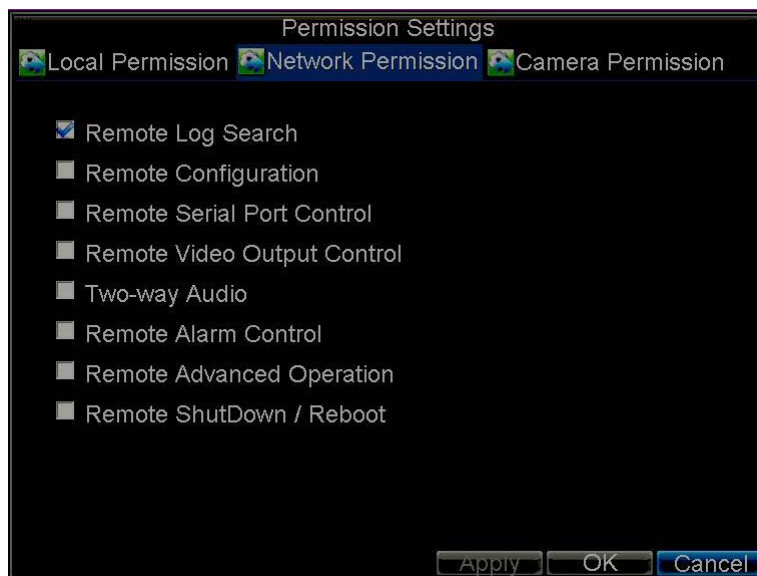

7. Configure permission for local settings on the **Local Permission** tab.

The local settings include:

- **Local Log Search:** Search and view logs of HRG DVR.
 - **Local Configuration:** Configure and restore parameters to factory defaults. Introduce settings to or export settings from HRG DVR.
 - **Local Advanced Operation:** HDD management (including the initialization and changing the properties of a disk). Ability to update system firmware as well as to stop the relay output
 - **Local Shutdown/Reboot:** Shut down or reboot the HRG DVR.
8. Select the **Network Permission** tab to configure network permission settings (see [Figure 12-7](#)).

Figure 12-7 Network Permission Settings Menu

The network settings include:

- **Remote Log Search:** Remotely view logs that are saved on the HRG DVR.
 - **Remote Configuration:** Remotely configure parameters, restore parameters to factory defaults and import settings to as well as export settings from the HRG DVR.
 - **Remote Serial Port Control:** Configure settings for RS232 and RS485 ports.
 - **Remote Video Output Control:** Configure settings for video output.
 - **Two-way Audio:** Permission to use two-way radio between the remote client and the DVR.
 - **Remote Alarm Control:** Remote alert or control the relay output of the HRG DVR. Alarm and exception settings must be configured properly to upload to host.
 - **Remote Advanced Operation:** Remotely manage hard disk drives (initializing and setting properties for HDDs). Permission to remotely update system firmware and stop relay output.
 - **Remote Shutdown/Reboot:** Remotely shut down or reboot the HRG DVR.
9. Select the **Camera Permission** tab to configure channel permission (see [Figure 12-8](#)).

Figure 12-8 Camera Permission Settings Menu

The channel settings include:

- **Remote Live View:** Select and view live video over the network.
 - **Local Manual Record:** Locally start and stop manual recording on any of the channels.
 - **Remote Record Starting:** Remotely start and stop manual recording on any of the channels.
 - **Local Playback:** Locally play recorded files that are on the HRG DVR.
 - **Remote Playback:** Remotely play and download recorded files that are on the HRG DVR.
 - **Local PTZ Control:** Locally control PTZ cameras.
 - **Remote PTZ Control:** Remotely control PTZ cameras.
 - **Local Video Export:** Locally back up recorded files from any of the channels.
10. Click **OK** to save the settings and exit the menu.

Note If you forget the password to your HRG DVR, contact your supplier with the serial number of the HRG DVR to obtain a secure code to reset your HRG DVR.

Deleting a User

To delete a user from the HRG DVR:

1. Click **Menu** > **Settings** > **User** to enter the User Settings menu.
2. Select the user you want to delete.
3. Click **Delete** to confirm the deletion.
4. Click **OK** to exit the menu.

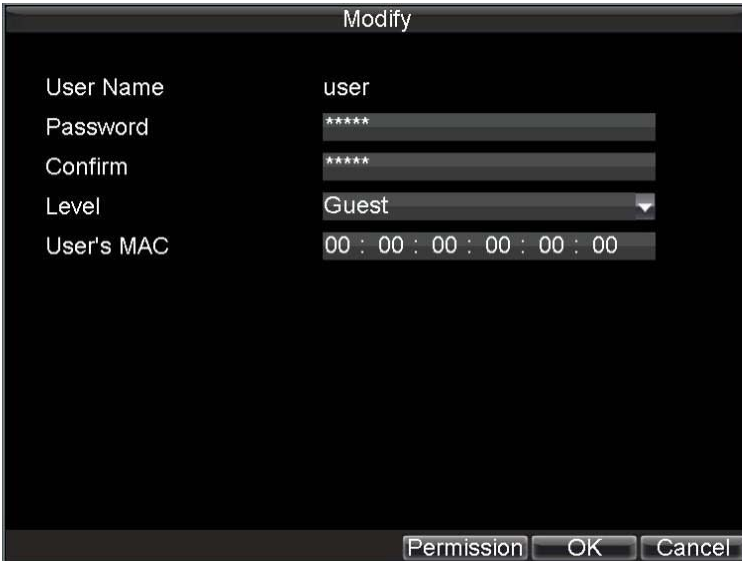

Note The Administrator cannot be deleted.

Modifying a User

To modify a user:

1. Click **Menu** ► **Settings** ► **User** to enter the User Settings menu.
2. Select the user you want to modify.
3. Click **Modify** to enter the Modify menu (see [Figure 12-9](#)).

Figure 12-9 Modify User Menu

The screenshot shows a dialog box titled "Modify" with a dark background. It contains the following fields and controls:

User Name	user
Password	*****
Confirm	*****
Level	Guest
User's MAC	00 : 00 : 00 : 00 : 00 : 00

At the bottom of the dialog box, there are three buttons: "Permission", "OK", and "Cancel".

4. Edit the user information.
5. To modify user permissions, click **Privileges**. Permissions settings are defined in the Adding a New User section described above.
6. Click **OK** to exit the menu.

Managing the System

Importing and Exporting the Configuration File

Configuration information from your HRG DVR can be exported to a USB device and imported into another DVR. This will allow you to efficiently setup the same configuration on numerous HRG DVRs.

To import or export HRG DVR configuration:

1. Click **Menu** > **Maintenance** > **Configuration** to enter the Import/Export Configuration menu (see [Figure 12-10](#)).

Figure 12-10 Import/Export Configuration Menu

2. Click **Export** to export a configuration file to USB device. USB device must be connected at this point to the HRG DVR.
3. To import a configuration file, select the file from the USB device, and then click **Import**.
4. After the import process is completed, the system will automatically reboot the HRG DVR.
5. Click **Cancel** to exit the current menu.

Updating the System Firmware

The firmware on your HRG DVR can be updated using two methods: you can update via a USB device or over the network via an FTP server.

To update via a USB device:

1. Connect the USB device to the HRG DVR. The firmware file must be located in the root directory of your USB device.
2. Click **Menu** > **Maintenance** > **Upgrade** to enter the Firmware Update menu (see [Figure 12-11](#)).

Figure 12-11 Firmware Update Menu

3. Select the **Local Upgrade** tab.
4. Select the firmware on the USB device.
5. Click **Upgrade** to begin the update process.
6. After the system firmware has been updated, reboot the DVR to complete the upgrade process.

To update via an FTP server:

1. Configure the PC (running the FTP server) and the HRG DVR to be in the same Local Area Network (LAN). Run the third-party TFTP software on the PC and then copy the firmware to the root directory of TFTP.
2. Click **Menu > Maintenance > Upgrade** to enter the Firmware Update menu.
3. Select the **FTP** tab (see [Figure 12-12](#)).

Figure 12-12 FTP Firmware Update

4. Input the FTP server address.
5. Click **Upgrade** to begin the update process.
6. After the system firmware has been updated, reboot the HRG DVR to complete the update process.

Note If the HRG DVR fails to update, please contact your system supplier for further assistance.

Restoring the Default Settings

To restore the default factory settings to your HRG DVR:

1. Click **Menu** > **Maintenance** > **Default** to enter the Default Settings menu (see [Figure 12-13](#)).

Figure 12-13 Default Settings Menu

2. Click **OK** to restore the factory default settings.

Note Network information such as IP address, subnet mask, and gateway will not be restored.

Viewing the System Information

To view system information:

1. Click **Menu** > **Maintenance** > **Information** to enter the System Information menu (see [Figure 12-14](#)).

Figure 12-14 System Information

2. Click **OK** to exit to the previous screen.

Viewing the System Log

Many DVR events are logged in the system log.

To access the system logs and search for these events:

1. Click **Menu** > **Maintenance** > **Log Search** to enter the Log Search menu (see [Figure 12-15](#)).

Figure 12-15 Log Search Menu

Log Search

Major Type: Information

Minor Type: Start Record

Start Time: 07-13-2010 0 : 0 : 0

End Time: 09-13-2010 23 : 59 : 59

Search Cancel

2. Set the search parameters.
3. Click **Search** to start the search.

If logs matching the search conditions are found, they will be displayed in a list of search results (see [Figure 12-16](#)).

Figure 12-16 Log Search Results

Log Search

Major Type	Start Time	Minor Type	Parameter
Informatic	08-03-2010 08:51:33	HDD S.M.A.R.T	N/A

Informatic	08-03-2010 13:51:50	HDD S.M.A.R.T	N/A

Details Play Export Cancel

4. To view more detailed information about a particular log entry, select the log, and then click **Details**.
5. If applicable, you can also view the associated video to the selected log entry by clicking **Play**.

Exporting Log Files to a USB Device

Log files can also be exported to a USB device.

To export a log file:

1. Connect a USB device to the HRG DVR.
2. Select the log file to export, and then click **Export** to enter the Log Search Export menu (see [Figure 12-17](#)).

Figure 12-17 Log Search Export Menu

3. Click **Export** to export the log onto the USB device.
The exported file is named based on the time it was exported. For example, *20120911143958logBack.txt*.
4. Click **Cancel** to exit the current menu.

A

Glossary

This appendix provides an explanation for commonly used terms in this guide.

DDNS: (Dynamic DNS) A method, protocol, or network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a domain name server to change, in real time the active DNS configuration of its configured host names, addresses, or other information stored in DNS.

DHCP: (Dynamic Host Configuration Protocol) A network application protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network.

Dual Stream: Dual stream is a technology used to record high resolution video locally while transmitting a lower resolution stream over the network. The two streams are generated by the DVR, with the main stream having a maximum resolution of 4CIF and the sub-stream having a maximum resolution of CIF.

DVR: (Digital Video Recorder) A DVR is device that is able to accept video signals from analog cameras, compress the signal and store it on its hard drives.

HDD: (Hard Disk Drive) A storage medium which stores digitally encoded data on platters with magnetic surfaces.

HTTP: (Hypertext Transfer Protocol) A protocol to transfer hypertext request and information between servers and browsers over a network

Hybrid DVR: A hybrid DVR is a combination of a DVR and NVR.

NTP: (Network Time Protocol) A protocol designed to synchronize the clocks of computers over a network.

NTSC: (National Television System Committee) NTSC is an analog television standard used in such countries as the United States and Japan. Each frame of an NTSC signal contains 525 scan lines at 60Hz.

NVR: (Network Video Recorder) An NVR can be a PC-based or embedded system used for centralized management and storage for IP cameras, IP Domes and other DVRs.

PAL: (Phase Alternating Line) PAL is also another video standard used in broadcast televisions systems in large parts of the world. PAL signal contains 625 scan lines at 50Hz.

PTZ: (Pan, Tilt, Zoom) PTZ cameras are motor driven systems that allow the camera to pan left and right, tilt up and down and zoom in and out.

USB: (Universal Serial Bus) USB is a plug-and-play serial bus standard to interface devices to a host computer.

B

Solutions

This Appendix provides possible solutions for resolving system malfunctions that may occur from time to time.

Troubleshooting the HRG DVR

If this happens ...	Try this ...
The DVR makes a beeping sound after booting.	<p>The HRG DVR gives a warning beep after booting if:</p> <ul style="list-style-type: none">• There is no hard drive present in the HRG DVR;• The hard drive has not been initialized;• The hard drive is defective. <p>If you want to use your HRG DVR without any HDDs, you can disable this warning beep in the Exception Settings menu (See Exception Settings on page 70).</p>
The DVR does not respond to the IR remote control.	<p>After you have read the section Using the IR Remote Control on page 19, check that:</p> <ul style="list-style-type: none">• The batteries are installed correctly in the remote, making sure that the polarities of the batteries are not reversed;• The batteries are fresh and not out of power;• The remote has not been tampered with;• There are no fluorescent lamps in use in close proximity to the HRG DVR.
The PTZ is unresponsive.	<p>Check that:</p> <ul style="list-style-type: none">• The RS-485 cable is properly connected;• The PTZ dome decoder type is correct;• The PTZ dome decoder speed configuration is correct;• The PTZ dome decoder address bit configuration is correct;• To make sure that the main board RS-485 interface is not broken.
No video is recorded after setting motion detection.	<p>Check that:</p> <ul style="list-style-type: none">• The recording schedule is set up correctly by following the procedure in Scheduling Recording on page 41;• The motion detection area is configured correctly as described in Motion Detection Alarm on page 59;• The channels are being triggered for motion detection as described in Motion Detection Alarm on page 59.

If this happens ...

The HRG DVR does not detect my USB export device when I try to export recorded files.

Try this ...

There is a chance that the HRG DVR and your USB device are not compatible. Please refer to the following list of tested compatible/incompatible USB devices:

Compatible USB Flash Drives (FAT32)

- Aigo mini L8202, 1GB (needs to be formatted)
- Aigo Mini MP3-H06 Plus, 128M
- Aigo Mini, 128M
- Babydisk, 64M (manufacturer: Hansol Hedy)
- Caixing, 128M
- CoDisk, 64M
- Crucial, 1G
- DANE-ELEC, 512M
- Imation, 128M
- Kingston MD07, 1G
- Kingston Data Traveler, 2GB
- Kingston Data Traveler, 4GB
- Kingston, 1G
- Lexar, 1G
- LG M4, 4G
- Memorex, 1G
- Netac ODF, 64M
- Netac ODN (upgraded), 32M
- Netac OSC 64M, 32M
- Netac U200, 128M
- Newman Flash Disk, 32M
- Newman V3, 2GB
- Newman V6, 1GB
- PNY Attaché, 1G
- PNY attaché, 1G
- RUNDISK RM-UR03, 128M
- Samsung, 64M
- SanDisk, 1G
- Shingo, 1G
- SMART, 128M
- UNiBit, 128M
- Unis Z-301, 4GB

Incompatible USB Flash Drives (FAT32)

- Aigo Mini Type Generation II, 1GB
- Aigo Mini Type Generation II, 256M
- Kingsoft MD09, 1G
- Kingsoft MD2007, 1G/2G
- Kingston Data Traveler, 1GB
- Unis Chac USB2.0, 1GB

Compatible USB HDD (FAT32)

- Aigo Generation III, 80G
- Aigo Portable Storage H8165, 250G
- Aigo Portable Storage II (Smart Security), 40G
- IBM, 20G/30G
- Lenovo, 80G
- NESO N2501S, 500G
- NESO N2502B, 500G
- NESO N3501B, 1T
- Newman Newsmy, 40G
- Newman Traveller, 2.5T/40G
- Newman YDStar E80, 160G
- OMATA 3.5" Portable HD Enclosure
- PC HD + YDStar Disk Enclosure
- Samsung NM-0704, 160GB
- Seagate FreeAgent Go, 160G
- STYSEN E02 HD Enclosure + Samsung Kinpo 2.5" HD
- YDStar (Sony) + Mobile PC HD
- YDStar Su35 External HD Enclosure plus Seagate 7200.7 80G HD

Compatible USB R/W

- Aigo ME-335U2
- Aigo YDStar
- Aigo F5232BU
- ASUS CRW-4824A + YDStar USB Adapter Box
- BenQ (CD/DVD) EW164B
- BENQ 5232WI-ok2
- BENQ EW162I-OK2
- BenQ TW200D
- IMPRESS
- LG GSA-E60N
- LG(CD/DVD) GSA-E10L
- Samsung SE-S204
- Samsung SE-S224
- Samsung(CD/DVD) SE-S164
- Sony + YDStar USB Adapter Box
- Sony CD-R/RW CRX225E + Adapter Cable
- Sony CD-R/RW CRX230AD + Adapter Cable

Compatible SATA R/W

- ASUS DRW-22B1ST
- LG GH20NS10
- LG GH22NS50
- LITEON IHAS324-26 Y
- Panasonic SW-9588-C
- Pioneer DVR-212CHG
- Pioneer DVR-217CHG
- Samsung SE-S204
- Samsung SH-S223
- Samsung TS-H653F
- Sony AD-7200S
- Sony AW-G170S

Compatible IDE R/W

- ASUS DVD (IDE) DRW-1608P3S
- ASUS DVD (IDE) DRW-1814BL
- ASUS DVD (IDE) RD-W8141LB
- BenQ DVD (IDE) DW1670
- BenQ DVD (IDE) DW1680
- LG CD-R/RW GCE-8525B
- LG DVD (IDE) GSA-H12N
- LG DVD (IDE) GSA-H20L
- LG GH22NP20
- LG GSA-H55N
- NEC DVD R/RW & CD-R/RW ND-3500A
- Samsung DVD (IDE) TS-H652
- Sony CD-R/RW CRX225E
- Sony DVD (IDE) DW-G120A
- Sony DVD (IDE) DW-Q120A
- Toshiba Samsung CD-RW SH-R522
- Toshiba Samsung DVD Writer SH-S182

Troubleshooting the IR Remote Control

If this happens ...	Try this ...
The Status indicator does not turn green and there is still no response from the remote.	Check the following: <ul style="list-style-type: none"><li data-bbox="533 539 1385 595">• Ensure that the batteries are properly installed, and that the polarities of the batteries are not reversed.<li data-bbox="533 607 1222 633">• Ensure that the batteries are fresh and are not out of charge.<li data-bbox="533 645 1050 672">• Ensure that the IR receiver is not obstructed.<li data-bbox="533 683 1086 705">• Ensure that no fluorescent lamp is used nearby.
