Using Your ATI Multimedia Center

This chapter explains how to use the special features that your ATI Multimedia Center offers. The Multimedia Center is a suite of products that provides TV, Video CD, CD Audio, DVD, File Player, and Media Library in one package.

Starting ATI Multimedia Center

Starting from LaunchPad

The LaunchPad provides a convenient way to start all your Multimedia Center features — just click the feature you want. LaunchPad opens automatically when you start your computer, or if you prefer, you can right-click LaunchPad, and uncheck **Load on Startup** in the drop-down menu.

- To dock LaunchPad, right-click it, then click **Dock** in the menu. To change the docking position, right-click LaunchPad while it is docked, point to **Side ▶**, then choose a location.
- To change the size of the LaunchPad when it is not docked, double-click it or right-click it, and choose a size.

The buttons in the right side of LaunchPad let you access your desktop settings, get Help, and close LaunchPad. If your system does not have a TV tuner, **Video In** appears in place of TV in the LaunchPad.

Certain Multimedia Center features use some of the same resources. If you try to start one of these features while another is running, a resource conflict message appears. You have up to four choices:

- Run both features with reduced performance, where possible.
- Suspend the first feature while the other is active.
- Close the first feature.
- Press **Cancel** to continue without starting the second feature.

Starting from Windows® taskbar

- 1 In the Windows taskbar, click **Start**, then point at **Programs ►**.
- 2 Point at **ATI Multimedia Center ►**, then select **CD Audio, DVD, LaunchPad, File Player, TV, Video CD, Media Library, or Configuration**.

For information about using the ATI Multimedia Center features, see the online help.

Online Help

Feature Help. Click the **Help** button in any display panel to open the online help.

F1

Context-Sensitive Help. Context-sensitive help is always available for each feature; just press the **F1** key.

Tool Tips. Simply move the mouse cursor over a control to see a description of its purpose. As you become familiar with your ATI Multimedia Center, you may want to turn off Tool Tips — click the **Show Tool Tips** checkbox in the **Display** tab (for more information, see *TV display settings* on page 15).

ATI Desktop Help. For help on your ATI video card's graphics features, double-click the ATI icon in the lower-right corner of your screen.

Internet. Click <http://www.atl.com/support/index.html> for product support, including driver downloads, technical and warranty information.

ATI REMOTE WONDER™

The ATI REMOTE WONDER replaces all the functionality of a mouse in all Windows software applications. If you have an ATI graphics card installed in your system, you will also enjoy additional control over ATI software. For complete information and installation instructions, see the *ATI REMOTE WONDER Installation Guide* that came with your card.

Multimedia Center Configuration Tool

When the Multimedia Center is running, you access settings via the Settings dialogs. You can also use the Multimedia Center Configuration Tool to access DVD audio settings, TV settings, PC Check, file types, and skin settings for the following purposes.

- To modify settings that do not change regularly
- To change settings and run diagnostics when the Multimedia Center is not running
- To modify advanced settings that should only be changed if absolutely necessary

To open the Multimedia Center Configuration Tool

from LaunchPad

Click the Configuration Tool button in the Launchpad. For information on LaunchPad, see [page 2](#).

from Windows® taskbar

- 1** In Windows taskbar, click **Start**, then point at **Programs**.
- 2** Point at **ATI Multimedia Center**, then select **Configuration**.

To access DVD audio settings

Click the **DVD** tab in the Multimedia Center Configuration Tool. Three audio settings are available.

<i>Selection</i>	<i>Function</i>
Enable Dynamic Compression	Applies dynamic compression to the overall dynamic range of the audio (useful for low-volume listening and for smaller speakers).
Output surround compatible (Dolby Pro Logic®) signal	Encodes the 2-channel stereo output with Dolby Pro Logic information (used for external Dolby Pro Logic decoder/amplifier).
Add low-frequency effects channel into downmix	Includes the LFE (subwoofer) channel in the 2-channel stereo downmix (may be useful if you have external subwoofers or want more bass — this only affects DVDs with true LFE data in the Dolby Digital 5.1 sound tracks).

The Multimedia Center supports standard DVD-Video, which provides stereo and compressed, multi-channel surround sound using Dolby® Digital or DTS® encoding. DVD-Audio (DV-A) is a separate standard, which requires a DVD-Audio player.

If your graphics card is an ATI RADEON or later, Adaptive Deinterlacing is available (see *Deinterlacing* in [To set up the Personal Video Recorder](#) on page 41). Enabling this option most often improves DVD playback quality.

To access TV settings

Click the **TV** tab in the Multimedia Center Configuration Tool. The TV page provides settings for the Video Capture Source. If your system has multiple video decoders, select the one that Multimedia Center TV should use as its default.

To access file types

File Types displays how files are associated with different Multimedia Center applications. Click the **File Types** tab in the Multimedia Center Configuration Tool.

To access PC Check

PC Check evaluates your computer system to determine if it is correctly set up for multimedia playback. If your computer fails any of the tests, PC Check recommends corrective action.

The test results are best estimates; they may not be 100% accurate.

- 1 In Windows Taskbar, click **Start**, point at **Programs**, point at **ATI Multimedia Center**, then select **Configuration**.
A warning dialog appears, which identifies any pre-test requirements you should be aware of.
- 2 To start the tests, click the **Run Tests** button.
The tests last approximately 45 seconds. When they are complete, you can click the **Details** button to see the test results.

To access skins settings

Click the **Skins** tab in the Multimedia Center Configuration Tool, and select skins for your Multimedia Center components.

Modern

Classic

Tranquility

Zero-G

TV

Watch Television on your computer! You can receive up to 125 cable television channels and 70 antenna channels in smooth, full-motion video on the whole screen or in a window.

TV delivers advanced features: TV-On-Demand, Closed Captioning, Personal Video Recorder, Still Capture, Channel Surfing, Scheduled Events, TV Listings, Parental Control, and more.

When you click the logo in the upper left corner of the display panel, the “About...” notice appears. If you have more than one feature installed, a Task menu displays available and active features.

For information about using TV controls, see the online help and Tool Tips.

- All channels may not be available in all countries.
- Not all TV features are available with Video-In cards.

To start TV

from LaunchPad

Click the TV button in the Launchpad.

For information on LaunchPad, see [page 2](#).

from Windows[®] taskbar

- 1 In the Windows taskbar, click **Start**, then point at **Programs** ►.
- 2 Point at **ATI Multimedia Center** ►, then select **TV**.

 You can also start TV from other Multimedia Center features installed on your system. Click the ATI logo in the feature's control panel or display panel, then click **TV**.

Video-In

If there is no TV tuner in your computer system, a small control panel is provided for recording video from external video sources.

If you have a Video-In card, the following dialogs and features are unavailable:

- TV Tuner settings (see [page 18](#))
- Channel Surfing (see [page 23](#))
- TV-On-Demand (see [page 36](#))
- Channel Lockout (see [page 32](#))
- Parental Control (see [page 33](#))

Setting up TV

The first time you start TV, you must complete the Initialization Wizard. After that, the Wizard will not run unless you want to re-run it in order to change settings. The Initialization Wizard guides you quickly and easily through setting up TV channels, Parental Control, Sound, Recording Format, and TV-on-Demand.

Initialization Wizard

Click the Setup button, then click the **Display** tab.

Click the **Initialization Wizard...** button. The *TV Channels Initialization Wizard* appears. Follow the Wizard's instructions to select cable or antenna, choose the broadcast standard, and to scan for active channels.

Click **Next >**. The *TV Parental Control Initialization Wizard* appears. Follow the Wizard's instructions to set or change your Parental Control password.

- Passwords are **optional, case-sensitive**, and must be at least **three characters** in length.
- If you forget your password, you will have to uninstall and reinstall your TV software.

If your computer has an ATI ALL-IN-WONDER video card and an ATI TV WONDER video card, clicking **Next >** opens the MultView™ settings page, where you can enable MultView (Picture in Picture), specify the MultView window position, and enable dual monitor display.

MultView is not available with ALL-IN-WONDER VE cards.

Click **Next >**. The *Sound Initialization Wizard* appears. Follow the Wizard's instructions to set up your audio connection. Line-In is the most common connection.

- If you do not hear TV audio, ensure that the TV is tuned to a broadcasting channel, and that you have made the correct audio connections. See [Troubleshooting](#) on page 114 for more information.

Click **Next** >. The *Recording Format Initialization Wizard* appears. Follow the Wizard's instructions to select the default recording format.

Click **Next** >. The *TV-On-Demand Initialization Wizard* appears. Follow the Wizard's instructions to set up a temporary file and allocate file space. Available time is indicated. The **Advanced Settings** button lets you customize settings for image quality and processor load.

Click **Next** >. The *End of Initialization Wizard* panel appears. Click **Finish** to complete TV setup.

Sizing the TV display

You can resize the TV display using the mouse, the Maximize button, or CTRL key combination.

- The F2 key hides/shows the control panel, to save desktop space.

To resize the TV display using the mouse

Drag the display's border. The TV display maintains a fixed aspect ratio (width-to-height) of 4:3 to avoid picture distortion (to change this, see [TV display settings](#) on page 15).

To display TV in full-screen

Press CTRL+F or ALT+F to toggle between full-screen and the current size, or click the Maximize button. To return to the previous size, press the **Esc** key.

Ctrl

To display preset sizes using the CTRL key

Tiny	CTRL+1
Small	CTRL+2
Medium	CTRL+3
Large	CTRL+4
Toggle between full screen and current size	CTRL+F ALT+F
Increase size of display panel	CTRL + Up Arrow
Decrease size of display panel	CTRL + Down Arrow

TV Feature menu

You can access TV functions by right-clicking on the control panel or the viewing area of the display panel. This is very useful in full-screen mode.

Selection	Function
Setup	Opens the TV setup page.
Always On Top	Displays TV on top of other applications.
Show Control Panel	Shows the TV Control panel.
THRUVIEW™	<p>If your computer uses a RADEON or later video card, THRUVIEW Desktop and THRUVIEW Window are available.</p> <p><i>THRUVIEW Desktop:</i> The current panel appears full-screen as a translucent layer on top of all other windows when minimized.</p> <p><i>THRUVIEW Window:</i> The current panel appears as a translucent layer on top of any other windows, allowing you to work and watch TV at the same time.</p>

Selection	Function
Video Size	Indicates the sizes available for the current panel: Tiny 160 x 120 pixels Small 240 x 180 pixels Medium 320 x 240 pixels Large 640 x 480 pixels Full Screen
Aspect Ratio	Selects the width-to-height ratio for the video window: Non-Fixed Allows the window to be stretched to any proportions. Standard 4:3 Standard aspect ratio for television broadcast. Letterbox (16:9, 1.85:1, 2.35:1) Crops the top and bottom of the frame to fit a wider window. Widescreen (16:9, 1.85:1, 2.35:1) Scales the entire image to fit a wider window.
Connector	Specifies the video input: TV Tuner Selects TV Tuner input. Composite Selects composite video input. S-Video Selects S-Video input.
Sound Mode	Sets the audio mode: Captions when muted Displays closed captions when audio is muted. Stereo Enables stereo TV audio. Both Plays both standard and SAP audio tracks. SAP Enables the Secondary Audio Program. Mono Enables monaural TV audio.
Closed Captions	Specifies how closed captioned text is displayed. You can also enable the HotWords and TV Magazine features. (See <i>HotWords™</i> on page 26 and <i>TV Magazine</i> on page 27.)
Zooming	Selects the zoom ratio (2x , 4x , or 8x) or Unzoom if already zoomed. See <i>Zooming and panning</i> on page 30.
About...	Displays the About... dialog.
Exit	Closes TV.

TV keyboard shortcuts

You can use the following keys to control TV from your keyboard.

Command	Key(s)
Pause	Ctrl + B
Play	Ctrl + X
Toggle Play / Pause	Spacebar
Skip forwards / backwards	End / Home
Volume up / down	(numeric keypad) - / + ← → (alphanumeric keypad) _ / =, - / +
Channel up / down	↑ / ↓
Setup	Ctrl + S
Toggle closed captions	Ctrl + C
Unzoom	Alt + Z
Still capture	Ctrl + Insert
Size presets (Tiny, Small, Medium, Large)	Ctrl + 1 — Ctrl + 4
Toggle full screen	Ctrl + F
Exit full screen	Esc
Cycle through Size up / down	Ctrl + ↑ / Ctrl + ↓
Parental Control lock / unlock	Ctrl + L
Record	Ctrl + R
Help	F1
Hide control panel	F2
Hide video panels and borders; video panel snaps to edge	F3
Always on top	F4

Command	Key(s)
THRUVIEW window (Blended Window, regardless of settings in Display Settings page)	F5
THRUVIEW Desktop (Blended Desktop, regardless of settings in Display Settings page)	F6
Video Desktop, regardless of settings in Display Settings page)	F7
Minimize without Video Desktop or THRUVIEW	F8
Reverse play (Jog Shuttle) increments to next lower speed: -2x, -4x, -8x, -16x	F9
Normal play (Jog Shuttle)	F10
Forward play (Jog Shuttle) increments to next lower speed: 2x, 4x, 8x, 16x	F11
Play speed (slow, normal, fast)	Alt + F10
Export TV-On-Demand video	Ctrl + W
Cycle time display format (while recording or in TV-On-Demand)	Ctrl + T
Set Analog TV Tuner input connector	Alt + 1
Set Composite TV Tuner input connector	Alt + 2
Set S-Video TV Tuner input connector	Alt + 3
Exit TV	Alt + F4
About	Alt + A

TV display settings

The Display settings page lets you control how video is displayed in TV.

To open the Display settings page

Click the Setup button in the TV control panel, then click the **Display** tab.

<i>Selection</i>	<i>Function</i>
Video Size	<p>Size Selects the size for the current panel.</p> <p>Aspect Ratio Sets the width-to-height ratio for the current panel:</p> <p>Standard 4:3 Standard television.</p> <p>Letterbox Crops the top and bottom of the frame to fit a wider window.</p> <p>Widescreen Scales the video frame to fit a wider window.</p> <p>Crop Video Trims the outside edges of the video frame.</p>
Tool Tips	<p>Show Tool Tip Show helpful aids for using TV when you point at a control with your mouse.</p> <p>Show Shortcut Show keyboard shortcuts when you point at a control with your mouse.</p>

Selection	Function
Display Feature	<p>When Minimized Controls how TV behaves when minimized:</p> <p>Minimize TV TV becomes an icon on your desktop.</p> <p>Video Desktop TV display replaces your desktop pattern.</p> <p>THRUVIEW <i>Blended Window</i>: The current panel appears as a translucent layer on top of any other windows. <i>Blended Desktop</i>: The current panel appears in full screen as a translucent layer on top of any other windows.</p> <p>Always On Top Displays TV on top of other applications.</p> <p>Auto Hide Controls when in full screen Hides TV controls when displaying TV in full screen. If you move your mouse, the controls re-appear</p>
Hide Player Hotkey	Specify a keyboard key that hides/displays TV. This is useful when you want to do other work while recording or using HotWords.
Initialization Wizard	Re-runs the Initialization Wizard. See Initialization Wizard on page 9.

TV video settings

The video settings page lets you choose a video connector and fine-tune video characteristics.

To open the Video settings page

Click the Setup button in the Television control panel, then click the **Video** tab.

Selection	Function
Connector	Choose Analog TV Tuner, Composite or S-Video input. <ul style="list-style-type: none"> • If you choose Composite or S-Video, you must specify the Broadcast Standard.
Broadcast Standard	Choose the broadcast standard: NTSC, PAL, or SECAM.
Video Properties	<p>Color Adjusts the amount of color in the image.</p> <p>Brightness Adjust the amount of white in the image.</p> <p>Contrast Adjusts the gradation of tones between light and dark areas.</p> <p>Tint (only available for NTSC) Adjusts the balance of red-to-blue in the image.</p>
Gamma	Adjusts the color brightness of your display. The higher the gamma, the higher the brightness and contrast, maximum being a flat (unmodified) setting).
Reset	Sets all values on this page to their default values.

TV Tuner settings

The tuner settings page lets you autoscans for active TV channels, choose cable or antenna input, name channels, and set channel-specific options.

To open the Tuner settings page

Click the Setup button in the TV control panel, then click the **TV Tuner** tab.

<i>Selection</i>	<i>Function</i>
Channel Name	You can enter channel names. If you have TV Listings installed (see TV Listings on page 54), channel names are set automatically, based upon the Guide+ database.
Details...	Select a channel, then click the Details... button to open the Channel Property Details page (see Channel Property Details on page 19).
Autoscan	Scans for all active TV channels, and stores them when you click the Set button.
Cable Standard	Selects the country and cable or antenna.

Channel Property Details

When you select a channel and then click the **Details...** button in the TV Tuner settings page, the Channel Property Details page opens to let you set properties for particular channels — favorites list, channel assignment, and properties for audio, video, program lockout, and closed captioning.

For example, in the Channel Specific Settings Video page, you could change a channel to SECAM when the other channels are (by default) PAL. In the Closed Captioning page you could enable a set of HotWords specifically for a particular channel.

<i>Selection</i>	<i>Function</i>
Channel Name	Type a name for the channel.
Number	Displays the channel number.
Tunes to Station	Specify the TV station that you want this channel to receive. Autoscanning returns all channel assignments to normal (see Autoscan on page 18).
Channel in Favorites List	Check to add the channel. To remove a channel, uncheck it.
Channel in Channel Surf List	Check to add the channel to the Visual Selection list displayed when channel surfing (see Channel Surfing on page 23). To remove a channel, uncheck it.

Selection	Function
Channel Specific Settings	<p>Audio Click Audio, then click Details... to open the Sound details page.</p> <p>Mute Settings</p> <p>Global Applies mute settings to selected channel.</p> <p>Mute On Mutes audio.</p> <p>Mute Off Cancels muting.</p> <p>SAP Settings see Secondary Audio Program (SAP) on page 23.</p> <p>Global Applies SAP settings to selected channel.</p> <p>Stereo Activates stereo TV audio for this channel, if it provides it.</p> <p>Mono Activates monaural audio for this channel.</p> <p>SAP Activates SAP for this channel.</p>
Channel Specific Settings	<p>Video Properties Click Video, then click Details... to open the Channel Based Video Settings page. Move the sliders to change the values</p> <p>Color Amount of color in the image.</p> <p>Brightness Balance of light and dark in the image.</p> <p>Contrast Gradation of tone between the image's highlights, midtones and shadows.</p> <p>Tint Balance of red, green, and blue in the image (only available for NTSC).</p> <p>Broadcast Standard Choose the broadcast standard for this channel.</p> <p>Channel Lockout Click Channel Lockout, then click Details... to open the Channel Lockout Settings page (see Channel Lockout on page 32).</p> <p>Closed Captioning Click Closed Captioning, then click Details... to open the Closed Captioning Channel Settings page (see Closed Captioning on page 24).</p>

TV Stills Gallery settings

You can capture still images from TV, and save them in the Stills Gallery.

To open the TV Stills Gallery settings page

Click the Setup button in the TV control panel, then click the **Stills Gallery** tab. For information on the Stills Gallery, see [Stills Gallery](#) on page 65.

TV Schedule settings

The Scheduler lets you set up TV to watch or record selected TV programs at times you specify. See [Schedule](#) on page 110 for details.

ATI TV Bar

Browse the Web and watch TV at the same time, without resizing your windows! ATI TV Bar displays TV in your Internet Explorer Web Browser.

North American users can also view a display of channel names and numbers, with continuously updated program information.

To open ATI TV Bar

- 1 Launch Internet Explorer.
- 2 In Explorer's menu bar, click **View** ►, point to **Explorer Bar** ►, then click **ATI TV**.

Or click the ATI TV button in Explorer's menu bar.

- If TV is not running, ATI TV Bar opens it, and displays it in the TV Bar. Closing ATI TV Bar also closes TV.
- If TV is running, it is displayed in TV Bar, and the regular TV display disappears from your desktop. Closing TV Bar returns TV to its normal display on your desktop.
- If you resize Explorer, the TV display automatically fits itself to the new size.

ATI TV Bar controls

From left to right, the ATI TV Bar controls are:
 Channel down, Channel up, Volume, Mute, Go to top, Page up, Page down, Pause scrolling, Favorites, and Help.

Channel Surfing

You can browse through several TV channels simultaneously, and select channels by clicking on “thumbnail” images (miniature representations) of the channels. Each thumbnail displays the channel number, and is regularly updated to display the current program.

- A password is required to access locked-out channels (see [Channel Lockout](#) on page 32); otherwise, only unlocked channels will be displayed.
- Most controls are disabled during Channel Surfing.

To use Channel Surfing

- 1  Click the Channel Surf button in the TV control panel.
A grid of thumbnails appears over your TV display.
- 2 Click the thumbnail for the channel you want to preview.
The channel you clicked becomes “live”, and plays video and audio for a few seconds.
- 3 To select a channel for viewing, double-click a thumbnail.
The grid of thumbnails disappears, and the selected channel appears on your screen.

Closed Captioning

Display closed captioned text over video, like a standard TV, and/or in a separate window beside the video. When you use the separate window, you can use the scroll bar to review the last few minutes of text. You can set the background color, the font, and the font color for the window.

To display closed-captioned text

 Click the Closed Caption button in the TV control panel. Right-clicking the button opens a menu where you can control the type of captioning: over video, in a window, display alternate text, TV Magazine, HotWords, captions when muted.

 To close the Closed Captioning window, click the Exit button.

Closed Caption settings

The Closed Caption settings page lets you specify how closed captioned text is displayed — over video or in a window — and the background color, the font, and the font color for the window. You can also set up and enable the HotWords and TV Magazine features.

To set up closed captioning

Click the Setup button in the TV control panel, then click the **Closed Caption** tab.

Selection	Function
Placement	<p>External Window Displays closed captioned text in its own window. Click Font... to select the display font.</p> <p>Video Window Displays closed captioned text superimposed on the video. Click Font... to select the display font.</p> <p>Solid Background Displays closed captioned text on a solid background.</p> <p>Shaded Background Displays closed captioned text on a shaded background.</p>
HotWords	<p>Enable Check to enable HotWords when Closed Captioning is on (see HotWords™ on page 26).</p> <p>HotWords Setup Opens the HotWords settings page.</p>
TV Magazine	<p>Enable Activates TV Magazine (see TV Magazine on page 27.)</p> <p>TV Magazine Setup Opens the TV Magazine Setup Wizard.</p>
Closed Caption On Mute	Display closed captioned text when the audio is muted.
Show Alternate Text If Present	If T1 mode closed-captioned data is present in the caption stream, checking this box displays a full page of T1 mode, scrollable, closed captioned text. If you turn off Closed Captioning or change channels, the page is hidden.

HotWords™

Have your computer watch TV for you! When you turn on Closed Captioning (see [Closed Captioning](#) on page 24), you can specify words and phrases that Television will detect in the closed-captioned text.

You can set HotWords to show the matched text, restore TV, play a sound, enable TV Magazine, or enable the Personal Video Recorder when the HotWords appear. You can also have TV automatically transcribe the text when the specified words appear.

You can enable HotWords, and then minimize TV; when the specified words occur, TV opens. You specify words using the HotWords setup button in the Closed Caption settings page.

To set up HotWords

 Click the Setup button in the Television control panel, click **Closed Caption**, then click the **HotWords Setup** button. The HotWords Setup Wizard opens.

To enable HotWords, check the **Enable** box. The HotWords Setup Wizard will guide you through HotWords setup.

Selection	Function
First Word	Type the first word to be matched.
Match Type	Choose the type of match you want: <ul style="list-style-type: none"> • By Itself Open TV when the Hot Word occurs. • Followed by Open TV when the Hot Word occurs, and is immediately followed by the Optional Word you specify. • Not Followed By Open TV when the Hot Word occurs, if it is <u>not</u> immediately followed by the Optional Word. • In Sentence With Open TV when the Hot Word occurs, if it is in a sentence with the Optional Word.
Optional Word	Type the word you want to match with the Hot Word. When you specify an Optional Word, the system only looks for the First Word+Optional Word combination.

Selection	Function
Partial	Check this box to open TV when a <u>part</u> of the First Word occurs.
<i>Use the Add and Remove buttons to add and remove words from the list.</i>	
Actions to take when your HotWords occur.	<p>Show Matched Text Displays the text that matches your Hot Word(s).</p> <p>Restore Player Opens TV in its current state.</p>
Recording	<p>Enable TV Magazine Activates TV Magazine (see TV Magazine on page 27).</p> <p>Enable Personal Video Recorder Activates the Personal Video Recorder (see Personal Video Recorder on page 39).</p>

TV Magazine

Use TV Magazine to transcribe closed captioned broadcasting, including pictures and text. You can save files as RTF (Rich Text Format), which preserves formatting, and can be used in many word processors, plain text (TXT), or Hypertext Markup Language (HTML). You can use the Schedule feature to start TV Magazine at dates and times you specify (see [Schedule](#) on page 110).

- TV Magazine is only available in North America.
- When TV Magazine is enabled, it transcribes closed-captioned text even if the Closed Captioning button is off.

To start TV Magazine

Click the Setup button in the Television control panel, click the **Closed Caption** tab, then click the **TV Magazine Setup** button.

To enable TV Magazine, check the **Enable** box. The first time you use TV Magazine, the TV Magazine Setup Wizard will guide you through the setup.

Selection	Function
File Name	Type a name for the file.
File Format	Select a file format (RTF, TXT, or HTML).
Options	<p>Overwrite files Check to overwrite existing files. Uncheck to keep existing files.</p> <p>Remove Advertising (North America only) Automatically skips commercial advertising when you display or transcribe closed captioned text. It works best with programs that use scrolling transcripts rather than “text bubbles” to record closed captioned text; for example: Talk shows, News broadcasts, Sports, and Soap operas.</p> <p>(Depending upon the closed captioning format, commercials may occasionally be recorded — a little experimentation will show you how to get the best results.)</p> <p>Case Conversion Convert all characters to upper or lower case.</p>
Stop Transcribing After	Specify the number of minutes to transcribe.
Select Layout (Images are not saved with .TXT files)	<p>No image No images are saved.</p> <p>Images on Left Images are placed on the left, text on the right.</p> <p>Images on Right Images are placed on the right, text on the left.</p> <p>Alternate images Images and text alternate left and right.</p> <p>Use black & white pictures Save images as black & white, to save memory.</p> <p>Image Density 1/page 2/page 4/page</p>

External Captions support

When you record video using TV-On-Demand (see [page 36](#)) or the Personal Video Recorder (see [page 39](#)), the associated closed caption information is added to the Media Library (see [page 50](#)). TV can display the searchable, printable closed caption text in three ways:

- Over video in the video panel
- In the Closed Captioning Window
- Over video and in the Closed Captioning window simultaneously

The Closed Caption window contains a vertical scroll bar for navigating the closed caption text.

When you select ATI VCR recording format in the Personal Video Recorder Recording Presets page, the last page of the Recording Wizard allows you to record the closed caption information to a separate file, so that you can go to a particular location in the file when you double-click a specific section of the closed caption text.

To enable External Captions support

Right-click the Closed Caption button on the control panel, then click External Captions.

To go to a particular location in the file

Double-click a specific section of closed caption text.

To print the closed caption text

Click the **Print** button.

To search the closed caption text

Click the **Search** button, then type the word to find. You can search from the current position or start from the beginning.

Secondary Audio Program (SAP)

The Secondary Audio Program can be used to broadcast, for example, language translations, reading services for the visually impaired, weather forecasts, or information about a show.

- Only available for NTSC video; for PAL or SECAM, it is called Language B.
- Not all television stations broadcast SAP.

To hear the Secondary Audio Program

Right-click the Mute button in the Television control panel, then click **Sap** in the drop-down menu.

Zooming and panning

You can zoom in on the video in the Display panel to enlarge a selected portion of the screen, and return your display to normal. You can also pan (move the image horizontally and vertically) in the zoomed area.

To zoom

Click within the display panel, then hold down the mouse button and draw a rectangle around the area you want to zoom.

Or right-click the 1:1 button to open a menu where you can set the zoom level—Zoom x2, Zoom x4, or Zoom x8

To pan in the zoomed area

Move your mouse within the zoomed area to pan horizontally or vertically.

To unzoom

Right-click in the display panel to open the feature menu, point at **Zooming** ►, then click **Unzoom**.

Or click the 1:1 button in the control panel.

THRUVIEW™

If your computer uses a RADEON or later video card, THRUVIEW Desktop and THRUVIEW Window are available.

THRUVIEW Desktop. The current panel appears full-screen as a translucent layer on top of all other windows when minimized.

THRUVIEW Window. The current panel appears as a translucent layer on top of any other windows, allowing you to work and watch TV at the same time.

When you select THRUVIEW Desktop or THRUVIEW Window in the Display Settings page (see [TV display settings](#) on page 15), minimizing TV displays a blended desktop or blended window. Closed captioned text is not displayed.

A TV icon appears in the “tray” on the right side of the Windows taskbar. Click the TV icon to display the blend control panel, which you can use to adjust the blend level, change channels, and control the volume. Closed captioned information is not displayed.

You can also enable THRUVIEW Desktop or THRUVIEW Window when TV is not minimized: right-click the display panel or the control panel, then in the Feature menu, click **THRUVIEW Desktop** or **THRUVIEW Window**.

To restore your desktop pattern and TV, click the **TV** button (or the **Video** button, if you have a Video-In card) in the Windows taskbar.

Channel Lockout

Channel Lockout lets you block particular programs at specific times, and set a password to unlock them. Use the Program Lockout page to specify channel, time, and duration.

- Passwords are **case-sensitive**. For example, PASSWORD and passWord are *not* the same.
- If you forget your password, you must uninstall and reinstall your TV software to view password-protected programs.

To set Channel Lockout

- 1 Click the Setup button  in the Television control panel, then click the **TV Tuner** tab.
- 2 Click the channel you want to lock, then click the **Details...** button.
- 3 Click **Channel Lockout**, then click the **Details...** button.
- 4 Click **Create New**.

The Channel Lockout Wizard guides you through the lockout procedure.

In the channel list, locked-out channels have a padlock to the right of the channel name,

A lock icon appears in the control panel when the locked channel is selected.

To remove Channel Lockout

- 1 Click the Setup button  in the Television control panel, then click the **TV Tuner** tab.
- 2 Click the channel you want to unlock, enter your password, then click the **Details...** button.
- 3 Click **Channel Lockout**, then click the **Details...** button.
- 4 Select the channel you want to unlock.
- 5 Click the **Delete** button. To remove all program locks, click the **Delete All** button.
- 6 Click **OK**.

The padlock disappears, and the unlock icon appears in the control panel when the channel is selected.

Parental Control

Parental Control lets you restrict access to TV programs depending on their content rating. The video and audio of programs that you restrict will not be recorded until the correct password is entered.

- Parental Control is only available for North American (NTSC) Television.
- Passwords are **case-sensitive**, and must be at least **three characters** in length.
- If you forget your password, you must uninstall and reinstall your TV software.
- Parental Control is only available for computer systems that have a TV tuner.
- The capture still frames feature is disabled, and video recording will stop.

To set a Parental Control level

Right-click the Parental Control button in the Television control panel to display a menu of choices. The selected level is checkmarked.

- 1 Click the level you want.
The Set Password dialog appears.
- 2 Type your password in the upper box, then type it in the lower box to confirm it.

The following table summarizes the FCC guidelines for Parental Control.

Programs designed solely for children	
TV-Y	This program is designed to be appropriate for all children.
TV-Y7	This program is designed for children age 7 and above.
Programs designed for the entire audience	
TV-G	General audience.
TV-PG	Parental guidance suggested.
TV-14	Parents strongly cautioned.
TV-MA	Mature audience only.

Recording Video and still images

Full-motion video. The Personal Video Recorder lets you record a clip of full-motion video plus audio from your video source and save it as an MPEG, AVI, ATI VCR (proprietary ATI video format), or WMV (Windows Media Video for streaming and download-and-play applications) file on your computer's hard disk. See [Personal Video Recorder](#) on page 39 for details.

Still images. Capture full-color, 24-bit-per-pixel, still images from television, save them, and print them. The images are placed in the Stills Gallery, which saves them as

Windows-standard bitmaps (.bmp) or a wide variety of standard formats.

The Stills Gallery also supports most industry-standard graphics file formats, so you can insert the images into reports, presentations, letters, and other documents, to add impact to training applications and presentations. See [Stills Gallery](#) on page 65 for details.

If the program is restricted by Parental Control, video recording and still capture are disabled (see [Parental Control](#) on page 33).

Recording a clip of video and audio from TV

To record a clip of video and audio

 Click the Record button in the Television control panel, or right-click the Record button and select a duration from the menu. The Personal Video Recorder starts recording video and audio to your computer's hard disk. For information on recording formats, see [Personal Video Recorder settings](#) on page 40. The right-click menu also provides One Touch Record settings, which let you set the duration, location, and style for the recorded file (see [One Touch Record](#) on page 44).

To change the file name and location during recording, edit the name and location in the recording panel, or click the **Select a File Name** button.

Four recording presets are available for quick selection — right-click the Record button in the control panel, or click a preset button in the personal Video Recorder Settings page. You can customize any of these presets; when you have selected a preset, click **Map Preset**.

To stop recording, click the Record button again. A Save As dialog opens, so you can name and save the recorded video.

- If the program is restricted by Parental Control, recording will stop (see [Parental Control](#) on page 33.)
- You cannot record copy-protected material.

To capture still frames from Television

 Click the Capture button in the Television control panel. The current frame is placed in the Stills Gallery (see [Stills Gallery](#) on page 65).

- If the program is restricted by Parental Control, Still Capture is disabled (see [Parental Control](#) on page 33.)

TV-On-Demand™

TV-On-Demand lets you pause a live program, return later, and resume watching where you left off. You can view the show from the beginning, even after it has started, without waiting until the whole program is recorded.

You can quickly back up a program, watch the selected portion again, and fast-forward or skip ahead to the live broadcast. You can also export the recorded video as an MPEG (.MPG) file or an ATI VCR file.

You cannot use the Personal Video Recorder in TV-on-Demand mode — use the Export function instead (see [To export recorded video](#) on page 38).

To start TV-On-Demand

Click the TV-On-Demand (upper) button or the Pause (lower) button in the TV control panel.

If you click the TV-On-Demand button, the button and the control panel change to TV-On-Demand mode, video is recorded and displayed.

If you click the Pause button, the button and the control panel change to TV-on-Demand mode, the last frame of video is displayed, and video is recorded. When you click the Play (lower) button, recorded video is displayed, continuing from where you paused.

If you do not hear TV audio, or if the audio is too low or too high, see [Troubleshooting](#) on page 114.

To return to live broadcasting

Click the Live TV button in the TV-on-Demand control panel. Video recording stops. To keep recording while you watch live TV, stay in TV-on-Demand mode and drag the slider to the right (see [To move within recorded video](#) on page 38).

To play recorded video

Click the Play button in the TV-on-Demand control panel.

To pause recorded video

The Pause button is displayed in live TV mode or in TV-on-Demand mode while recorded video is playing. When you click the Pause button, recorded video playback stops, displaying the last frame of video, TV-on-Demand continues recording live video, and the Pause button changes to the Play button.

When you click the Play button, delayed video resumes playback, and the Play button changes to the Pause button.

To change playback speed in recorded video

Click the Speed button to select playback speed: Slow Play (half-speed), Normal Play, and Fast Play (1.5x speed). Right-clicking the Speed button also displays a menu of speeds, and Go to Time lets you choose a time from which to start viewing recorded video.

- The Speed button is only enabled when you are in TV-on-Demand mode, but behind **Live**.

To skip backwards and forwards in recorded video

Click the left button to skip back; click the right button to skip forwards. The default settings are: forwards – 10 seconds; backwards – 30 seconds.

You can right-click the button to change the time settings to 1 frame, 10 seconds, 30 seconds, 1 minute, or two minutes.

To move within recorded video

Position slider

Jog Shuttle

Using your mouse, drag the position slider to move forwards or backwards in delayed video. As you move the slider all the way to the right, the time display indicates **Live**.

The Jog Shuttle feature provides high-speed playback — forwards or backwards. Using your mouse, drag the slider to the right (forwards) or to the left (backwards). When you release the mouse button, the slider returns to the middle (normal speed) position. Ten speeds are available: -16x, -8x, -4x, -2x, -1x, 1x, 2x, 4x, 8x, and 16x).

To export recorded video

Click the Export button in the TV-on-Demand control panel. A dialog appears, where you can select the portion of recorded video you want to save (Range:), and the location to store it (Output File:). You can save exported video in MPEG-2 or ATI VCR format.

- You can export more quickly if you return to live broadcast mode first (but do not return to TV-on-Demand, or you will overwrite your previously-recorded video).
- The Export button alerts you if there is insufficient video for export.

TV-On-Demand history

When you right-click the Time mode button in the Recording panel, a Go To Time menu lists all programs that TV-On-Demand has recorded. To open the program, click its file name.

When you click the Export button, a menu lists all programs that TV-On-Demand has recorded. You can select the start time and duration of the exported file.

TV-On-Demand uses the TV Listings data to provide the information (see *TV Listings* on page 54). If there is no TV Listings information, or if the data is outdated, the history shows the Type of Connection and Channel Number instead of Program Name and Channel name.

Personal Video Recorder

The Personal Video Recorder provides simple controls and powerful recording options. You can record a clip of full-motion video and audio from your video source and save it as an MPEG, AVI, VCR, or WMV file. You can play recorded files in the File Player (see [File Player](#) on page 101.) Advanced time-lapse and motion-triggered recording modes are available.

VideoSoap™, ATI's custom video noise reduction system, lets you remove noise that was in the original content or analog noise introduced as a result of poor transmission, substandard cabling, or poor analog-to-digital conversion (see [Using VideoSoap](#) on page 43).

VideoSoap is not available with ALL-IN-WONDER VE cards.

The Schedule feature lets you record TV programs on the dates and times you specify (see [Schedule](#) on page 110).

Because TV-On-Demand (see [page 36](#)) records to your hard drive, you cannot use the Personal Video Recorder in TV-On-Demand mode. Instead, use the Export function (see [page 38](#)) when you are in TV-on-Demand mode.

To start the Personal Video Recorder

When you record video from TV (see [To record a clip of video and audio](#) on page 35), the Personal Video Recorder opens automatically. If you want the Personal Video Recorder to prompt you before recording, click the **Prompt before Recording** checkbox in the **Personal Video Recorder** tab of the **TV Player Setup** page (see [Personal Video Recorder settings](#) on page 40).

When you right-click the record button, the following options are available (the available times depend upon your hard disk space).

Record for

Sets the length of time to record.

Record until

Sets the time to stop recording.

Record until manually stopped

Record until you click the Record button again.

Recording preset

Lets you change the default recording preset.

One Touch Record Settings

Open the One Touch Record settings page.

Motion Triggered Recording

Opens the Motion Triggered Recording Wizard.

Time Lapse Recording

Opens the Time Lapse Recording Wizard.

Show Recording Panel

Shows/ Hides the Personal Video Recorder panel, which shows the number of frames recorded and the time remaining on your hard disk.

Recent Recording

Displays a list of the five most recently recorded files.

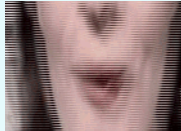

One Touch Record provides one-click recording for specific times and durations. The default recording preset is used (see Recording Preset in [Personal Video Recorder settings](#) on page 40).

Personal Video Recorder settings

Use the Personal Video Recorder settings pages to specify recording quality, duration, general options, and custom settings. Several recording modes are available, including advanced modes such as Time-Lapse and Motion-triggered.

To set up the Personal Video Recorder

-  Click the Setup button in the TV control panel, then click the **Personal Video Recorder** tab.

Selection	Function
<p>Recording Preset</p> <p>These settings are dependent upon your system configuration. Each can be customized.</p>	<p>Check DVD, Good, Longer, Video CD, or Custom. (The higher the quality, the less video you will be able to store on a disk.)</p> <p>Note: The Video CD setting lets you create Video-CD-compliant files that can be played on most consumer DVD players. To create a CD containing the Video CD files, you need a writable CD drive and accompanying CD creation software.</p> <p>For extremely fine control, click the Map Preset button to open the Recording Presets, where you can create and modify preset recording formats.</p> <p>Click the Create New... button to create a new recording preset. The Recording Wizard guides you through the process.</p> <p>Click the Edit... button to create a modified copy of an existing recording preset, or to edit one of your own custom settings. The Recording Wizard will guide you through the process.</p> <ul style="list-style-type: none"> • Step 2 of the Recording Wizard provides a deinterlacing option. Select it to prevent horizontal streaks (“combing”) in captured video.  <hr/> <p>The following, advanced recording settings are available when you click the Map Preset button:</p> <p>Time lapse recording</p> <p>Record video-only, frame-by-frame and save it to an MPEG-1 or MPEG-2 file. You can also manually trigger recording from your keyboard, mouse, or other device. You can use this feature to create stop-motion video (for example, Claymation®-type video).</p> <p>Click the Map Preset button, then click Time Lapse. To edit the preset, click the Edit button, and follow the on-screen steps.</p>

Selection	Function
	<p>Motion-triggered recording Record video and audio, triggered by motion in the video frame. This feature could be used for security applications or to record only material of interest over time.</p> <p>You can specify an optional “include” rectangle that defines the area to watch for motion, and an “exclude” rectangle that is excluded from motion detection. For example, you could monitor a room, but exclude a fish tank, which would falsely trigger recording.</p> <p>You can simultaneously perform motion-triggered and time-lapse recording, to record a minimum number of frames over time, but include real-time video when motion occurs.</p> <p><i>Click the Set Custom button, then click Default Motion Triggered. To edit the preset, click the Edit button, and follow the on-screen steps.</i></p> <p>Record in Windows Video Format</p> <p>WMV recording lets you record WMV video to a file. Use these settings to record a Windows Media file for streaming over a 56K dial-up network connection or a cable or DSL network connection.</p> <p><i>Click the Map Preset button, then click 56K Modem or Cable/DSL Modem. To edit the preset, click the Edit button, and follow the on-screen steps.</i></p>
<p>Disk Space</p>	<p>Allocates the amount of disk to store recorded video.</p> <p>Always Record to Temporary Drive Always use a temporary drive while recording, or only when the specified recorded file is not on a local disk.</p> <p>Temporary Drive Select the drive to hold temporary recorded video.</p> <p>Amount of disk space to leave free on temporary drive Use the slider to set the amount of space to leave on your temporary drive. Use this to prevent the recording from completely filling your drive.</p>
<p>Current Settings</p>	<p>Displays the video format, size, frame rate, and audio format for recorded video.</p>

Selection	Function
Capture High Resolution Stills	Capture still images at high resolution.
One Touch Record	<p>Custom duration configuration Type the number of days, hours, and minutes you want to record.</p> <p>Folder for recorded files Choose a location for your recorded files.</p> <p>Recorded file name Type a name for your recorded files.</p> <p>File name style Type a custom name or choose a preset from the list.</p>

Using VideoSoap

- 1 In the Personal Video Recorder tab, click **Map Preset**, then choose a recording preset.
- 2 Click the **Edit VideoSoap** button, choose a VideoSoap type, then click the **Next** button.
The VideoSoap Configuration page opens. You can apply up to four filters, each with its own noise reduction algorithm. Use the sliders to control the strength of the filters.
To preview the effect, choose a preview area, then click the **Preview** button.
- 3 When you are satisfied with the results, click the **Finish** button.

VideoSoap is not available with ALL-IN-WONDER VE cards.

One Touch Record

One Touch Record provides one-click recording for specific times and durations. The default recording quality is used (see **Recording Quality** in *Personal Video Recorder settings* on page 40.)

Right-click the Record button in the control panel, then click the recording option that you want.

Selection	Function
Record for	<p>30 minutes, 1 hour, 2hours Record for these preset durations.</p> <p>(xx days, yy hours, zz minutes) Specify the recording time you want.</p>
Record until (Indicated times are examples only)	<p>7:30 Record until the end of the half-hour (time shown depends upon the current time).</p> <p>8:00 Record until the end of the first hour (time shown depends upon the current time).</p> <p>9:00 Record until the end of the second hour (time shown depends upon the current time).</p> <p>The end of (show name) Record until the end of the program.</p>
Record until manually stop	Record until you click the Stop button in the Personal Video Recorder.
One Touch Record Settings	(See <i>Personal Video Recorder settings</i> on page 40.)
Motion Triggered Recording	Use motion triggered recording (see <i>Personal Video Recorder settings</i> on page 40.)
Time Lapse Recording	Use time lapse recording (See <i>Personal Video Recorder settings</i> on page 40.)
Show recording panel	Show/hide the recording panel.

Achieving the best results with MPEG video recording

To access MPEG properties

- 1 Click the setup button  in the Television control panel, then click the **Personal Video Recorder** tab.
- 2 In **Recording Quality**, click the **Map Preset...** button.
- 3 Click **DVD**, then click the **Edit...** button.
Capture Wizard (Step 1) appears.
- 4 Enter a name and description (if desired) for the preset.
- 5 Click **Next >**. The MPEG-specific Recording Wizard pages appear.
- 6 Select MPEG-1, MPEG-2, or ATI VCR, then click **Next >**.

To select I-frame-only MPEG recording

This uses less CPU, but requires 2 to 3 times the bit-rate, which produces larger files.

- 1 Click the **I Frames Only** button.
- 2 Click **Next>** until you reach Finish, then click **Finish**.

To select I, B, P frame MPEG recording

This uses more CPU, but greatly reduces the bit-rate required for a given level of video quality.

- 1 In the Recording Wizard, set **Number of P Frames in Group** to **12**.
- 2 Set **Number of B Frames in Subgroup** to **3**.
(These are typical values; they can be adjusted.)

To record with a minimum number of dropped frames in MPEG-1 or MPEG-2 format, the following settings are recommended. *Ranges* are given, as some video compresses better than others, depending on the amount of rapid motion and the number of complex scenes.

<i>Video Format</i>	<i>IBP Frames (Mbps)</i>	<i>Minimum CPU Required</i>	<i>I-Frame Only (Mbps)</i>	<i>Minimum CPU Required</i>
160x120	1.0	P200-MMX	1.0	P200-MMX
352x240	1.5	PII-266	2.0	P200-MMX
320x480	3.0	PII-400	4.0	PII-266
640x480	4.0	Athlon 600	6.0	PIII-450
720x480	4.0	Athlon 700	6.0	PIII-450

Mbps = Megabits per second, or millions of bits per second.
1 Mbps is approximately 125Kbytes/second.

If your system is not capable of achieving smooth-looking video, try the following:

- Record I frames only.
- Record using a smaller frame size.

ATI VCR is best suited for Personal Video Recorder use.

MPEG-1 decoders are widely used, so video encoded in MPEG-1 format can be played on many PCs. However, MPEG-1 playback on a PC uses the Microsoft MPEG-1 decoder, which may not provide the best performance.

MPEG-2 playback on a PC requires an MPEG-2 decoder. With ATI graphics cards, MPEG-2 decoders use the ATI hardware IDCT and motion compensation, which provides higher resolution video playback and less CPU loading than the Microsoft MPEG-1 decoder.

MultiView™

If you have an ATI ALL-IN-WONDER card and an ATI TV WONDER PCI card installed, MultiView lets you watch a different channel in a secondary video window. You can record video from your ALL-IN-WONDER card while you watch another channel on the TV WONDER. The secondary window can be in the following locations:

Picture in Picture (PiP)

When the main video window is in full-screen, the MultiView (PiP) video window is embedded in the main window. It can be positioned in the top/bottom left or top/bottom right of the main window.

Picture outside Picture (PoP)

If you use only one monitor, the main and MultiView video windows can be displayed in separate windows.

If you use dual monitors, you can drag the MultiView window to the secondary monitor. MultiView can be displayed in a window or full-screen in the secondary monitor.

- The first time you start TV, the MultiView Initialization Wizard will guide you through setting up the MultiView window location and the MultiView tuner audio connection.
- MultiView is not available with ALL-IN-WONDER VE cards.

MultiView controls include channel up/down, Mute/unmute, audio, swap channel, volume slider, and channel status. When MultiView is in focus, you can also type a channel number or name to change channels.

To enable MultiView

In the MultiView Initialization Wizard, click **Enable MultiView**.

To open and close MultView

- 1 Right-click the control panel or the video panel.
- 2 In the Feature menu, click **MultView**, then click **Show**.
To close MultView click the Close button .
 - Or right-click the control panel or the video panel.
 - In the Feature menu, click **Show**.

To change the location of the MultView window

When the main video window is in full screen, right-click the control panel or the video panel, click **MultView**, click **Location**, then click the position you want: Top-Left, Top-Right, Bottom-Right, or Bottom-Left.

You can manually change the embedded window's size and location when the MultView borders are visible.

Autohiding MultView window controls and borders

The MultView window borders disappear after a few seconds of mouse inactivity on the MultView window. When you move your mouse over the MultView window, the border reappears.

Only one video window can be in control. When the embedded MultView window is in focus, its borders are red; when it is not in focus, its borders are black. For example when the borders are red, a REMOTE WONDER (see [page 3](#)) channel-change command will change the MultView channel.

MultView audio requirements

If you have one audio card or an integrated audio chip, you must connect one audio path internally (CD-In, for example) and the other externally (Line-In, for example).

If you have two audio cards or one audio card and an integrated audio chip, you can connect both audio paths internally, externally, or one internally and the other externally.

MultView keyboard shortcuts

You can use the following keyboard shortcuts to control MultView.

Command	Key(s)
Toggle MultView window on / off	Alt + H
Toggle MultView focus	Alt + O
MultView window in top-left of main video window	Alt + ←
MultView window in bottom-left of main video window	Alt + ↑
MultView window in bottom-right of main video window	Alt + ↓
MultView window in top-right of main video window	Alt + →
Cycle through MultView window positions	Alt + W
Toggle MultView full screen / windowed mode	Alt + W
Swap channels	=
Channel up	(numeric keypad) +
Channel down	(numeric keypad) -
Volume up	(numeric keypad) ↑
Volume down	(numeric keypad) ↓
Toggle mute	(numeric keypad) *

Media Library

The Media Library provides a convenient way to manage and play all your multimedia files. When you record video or audio, it is automatically added to the Media Library.

You can scan directories for multimedia content, filter by file type and date, set up playlists, and convert media files to ATI VCR or MPEG-2 format.

The upper window contains the multimedia content that the Media Library finds in the specified directory. You can drag files from the upper window into the lower window to create playlists of various multimedia files.

For information about using Media Library controls, see the online help and Tool Tips.

 Media Library does not track files on removable media, such as CDs.

To start the Media Library

from LaunchPad

Click the Media Library button in the Launchpad. For information on LaunchPad, see [page 2](#).

from Windows® taskbar

- 1 In the Windows taskbar, click **Start**, then point at **Programs** ►.
- 2 Point at **ATI Multimedia Center** ►, then select **Library**.

To scan for content

- 1 Click the Scan for Content button  to scan for media files in the directory you specify.
- 2 Select the content to scan for — All, Movie, Picture, Document, or TV-On-Demand — and follow the on-screen directions.

Media Library adds any of the following types of files that it finds in the directory you specified.

- The Music category scans for .wav, .mp3, .mid, and .wma audio files.
- The Movie category scans for .vcr, .avi, .asf, .mpg, .mpeg, .mp2, .mov, and .wmv video files.

Filtering files

You can filter the media files in the Library to display only the file types and time periods you want.

To filter by Type

Click the Type button in the upper left corner of the Library to filter by media type:

All, Movie, Music, Picture, Document, or TV-On-Demand (see [TV-On-Demand™](#) on page 36).

To filter by date

Click the Date button in the upper left corner of the Library to filter by date, protection status, and unviewed:

All, Today, Yesterday, This week, Last week, Protected from deletion, or Unviewed. (To protect files from deletion, select one or more entries in the main view, right-click, and then click **Protect from deletion.**)

Converting media files

When you capture video from TV, setting the Recording Quality to Good or Longer saves files in ATI VCR (Proprietary ATI video format), which can only be played on the ATI File Player.

To convert ATI VCR files to MPEG-2 format

- 1** Add the .VCR file to the Media Library by scanning for content or by dragging it into the Media Library's content (upper) window.
- 2** Right-click the file, then click **Export to MPEG-2...** in the drop-down menu.
- 3** Save the file in the location of your choice (the default is My Documents in your Windows desktop).

You can also convert TV-On-Demand files recorded from ATI TV to MPEG-2 format (see *TV-On-Demand™* on page 36).

Making Playlists

Select files from the Media Library's content (upper) window and drag them into the playlist (lower) window to build a playlist of files that will play in the sequence you specify. You can set up a loop that plays your selections continuously, and you can shuffle selections so that they play in random order.

You can export playlists into M3U (MP3 playlist format). Right-click the playlist window, then select **Export playlist to M3U**. You can store these files in your My Documents folder.

External Captions support

You can search for Closed Caption files created by Multimedia Center TV (see *External Captions support* on page 29).

Recommended content deletion

You can have the Media Library find and delete files that meet the following criteria.

- Age
- Time since last viewed
- Size
- Type
- Protection status

1 Right-click in the content (upper) window, then click **Recommend Content Deletion**.

The Content Deletion page opens.

2 Select the criteria for deletion, then click **Next**.

The Contents Recommended page opens.

3 To delete selected files, click the file(s) you want to delete, then click **Remove Selected**. To remove all files, click **Remove All**.

4 Click **Finish**.

TV Listings

Gemstar’s GUIDE Plus+™ is an electronic television programming guide for Microsoft Windows. It provides advanced program information, such as station names and numbers, as well as program names and details.

You can schedule recording and viewing sessions, search for programs, and maintain a list of your favorite shows. For more information, see the TV Listings Help.

- TV Listings is only available in selected countries.
- Before you use TV Listings for the first time, it is recommended that you complete the TV Initialization Wizard (see [Setting up TV](#) on page 9).
- You need an internet connection to download the TV listings to your computer.
- Running GUIDE Plus+ weekly will keep your TV listings current.

To start TV Listings

Click the TV Listings button in the TV control panel, or click the TV Listings icon in the LaunchPad.

To access TV Listings information from TV

- When you Autoscan, TV Listings provides station names (see *Autoscan* in [TV Tuner settings](#) on page 18.)
- When you change channels, the current program name, and the station name and number are displayed.
- When watching TV, right-click the TV Listings button to get the following options:
 - TV Program Details** If TV Listings has information about this program, it displays a panel containing detailed program information.
 - Auto Update** As time passes, or as you change channels, the TV Program Details panel updates its program information.

- **Copy** Check this to copy the TV Program Details panel's information into your Windows clipboard.
- Right-clicking in the text area of the TV Program Details panel also provides access to the **Auto Update** and **Copy** features.

- When you use TV Listings, the TV Control panel is hidden, and some features are unavailable.
- TV Listings is unavailable when you use Channel Surf (see [page 23](#)) or video recording (see [page 34](#)).

Setting up TV Listings

Registration

The first time you launch the GUIDE Plus+ system, you will need to register. This allows you to download the listings for your area or cable service.

To download updated listings

- 1** In the **File** menu, click **Download Weekly File ...**
The Download Assistant opens.
- 2** Click the **Download** button to download the listings.
To make changes, click the **Change Settings** button.

To customize channels

The **Edit** menu contains two features related to the channel list:

- **Station Lists ...** lets you create and maintain a list of stations, based on the master list for your area or cable service.
- **Channel Number ...** lets you assign and maintain channel numbers for each station.

Getting around

To navigate the various TV Listings views, click the tab for the view you want, or select the appropriate view from the **View** menu at the top of the screen.

Use the mouse or cursor keys to move within the current view. Left-click to select an item and display its details in the details window above the grid or log.

Right-click to open a pop-up menu with various options:

Watch	Adds the item to your Watch schedule (see Schedules tab on page 61).
Record	Adds the item to your Record schedule (see Schedules tab on page 61).
Favorite	Adds the item to your Favorites list (see Favorite search on page 59).
Program Details	Opens a window that includes a detailed description of the program, as well as additional air dates.
Go To	Tunes the PIP (Picture-In-Picture—the window in the upper left corner of the guide where the TV picture is displayed) to the selected station.

Recording

TV Listings works with your TV tuner to automatically record shows. When you select a program to record, a pop-up window appears, requesting a file name and location to save the file.

When you select a program for recording, the Record icon appears next to the title in any view where that program is displayed.

- To remove a program from the Record Schedule, simply click the Record icon next to the program title.

Viewing

TV Listings works with your TV tuner to automatically display shows. When you select a program for viewing, the Watch icon appears next to the title in any view where that program is displayed.

Watch

- To remove a program from the Watch Schedule, simply click the Watch icon next to the program title.

Views

There are two, main views for the guide: **Grid** and **Log**.

Grid view displays 24 hours of listings in a table (similar to your newspaper or cable guide). Use the arrow keys to scroll up, down, left, or right. You can also scroll using the horizontal and vertical scroll bars.

- Scroll to a specific program to display its details in the area above the grid.
- To display just the stations you want, use the **Station Lists ...** option in the **Edit** menu (see *To customize channels* on page 55.)

Log view displays the data in a list, in the following order: Date/Station/Category and Title/Episode. Use the arrow keys to scroll up, down, left, or right. You can also scroll using the horizontal and vertical scroll bars.

- Scroll to a specific program to display its details in the area above the log.
- To display just the stations you want, use the **Station Lists ...** option in the **Edit** menu (see *To customize channels* on page 55.)

Filter options

Click the Filter icon to open the Filter options dialog, where you can adjust the current view and quickly locate programs. Select the boxes you want to apply to the current view, and click **Close**.

Select the **Use Station List** checkbox to apply the most recently customized station list.

Actors tab

The Actors tab displays all actors and actresses starring in all the movies in the current listings. A list of actor names is displayed on the left of the screen. Click the name of the actor for whom you want to display all movies and show times.

- Use the arrow keys to scroll up and down in the Actors List.
- You can also type an actor's partial or full name in the textbox above the Actors List to quickly locate that actor.
- Scroll to a specific program to display its details in the area above the list.
- To display just the stations you want, use the **Station Lists ...** option in the **Edit** menu (see *To customize channels* on page 55).

Categories tab

The Categories tab displays all genre categories in the current listings. A list of genre categories is displayed on the left of the screen.

- Click the category you want to view, to display all titles for that category on the right side of the screen.
- Double-clicking on categories with a + sign opens a list of sub-categories on the right side of the screen.
- Use the arrow keys to scroll up and down in the Categories List. You can also scroll using the horizontal and vertical scroll bars.
- Scroll to a specific program to display its details in the area above the log.
- To display just the stations you want, use the **Station Lists** option in the **Edit** menu (see *To customize channels* on page 55).

Searches

GUIDE Plus+ comes with a powerful search engine to help you find the programs you want. You can save and maintain a list of custom searches to run each week, as well as a Favorites search that tracks your favorite shows and movies.

Favorite search

Access the Favorite search under the **Searches** tab. Favorites are a special list of show titles that you keep and use to find your favorite shows with a mouse click. You can add and remove items from your favorites list from any view in the guide.

- Favorites is always the first search displayed in the Searches tab. It behaves like other searches, but it cannot be deleted.
- When one of your favorites appears in any view of the guide, ☺ appears in front of the title.

Typically, you use the favorites list to find your preferred shows when your data file is updated. Select the Favorites search from the list of searches, and the guide will look up and display all your favorite items. You can then select any or all of these items into your Schedule. You can set Favorites in two ways:

- In any view, select an event you want to place in your Favorites list. Right-click to open the **Event** menu, then select the **Favorite** option to toggle the item in or out of your Favorites list.
- In any list of events, three checkboxes appear in front of the event. The right checkbox is the Favorites indicator; click to toggle it.

Movies tab

The Movies tab displays all movie sub-categories for all movies in the current listings, on the left side of your screen.

- Click the category you want to view; all titles for that category will be displayed on the right side of your screen.
- Use the arrow keys to scroll up and down in the Movies List. You can also scroll using the horizontal and vertical scroll bars.
- Scroll to a specific program to display its details in the area above the log.
- To display just the stations you want, use the **Station Lists ...** option in the **Edit** menu (see *To customize channels* on page 55).

Schedules tab

A schedule is a list of TV events that you have selected in any view, including search results. The schedule is in the form of a Log View (see [page 57](#)). There are three lists you can choose from:

- **Watch** displays all events with at least the Watch indicator set.
- **Record** displays all events with at least the Record indicator set.
- **All** displays all events with either the Watch or Record indicator set.

In any view, when an event has been scheduled, an icon appears in front of the title, indicating whether the item is scheduled to watch, record, or both. Scheduled items can be added and removed in two ways:

- 1** In any view, select the event you want to place in your schedule, right-click to open the **Event** menu, then select **Watch** or **Record** to toggle the item in or out of your list of scheduled items.
- 2** In any list of events, three checkboxes appear in front of the event; the left checkbox is the Watch indicator, and the center checkbox is the Record indicator. Click either one to toggle it.

Searches tab

The Searches tab displays a list of saved searches, including a list of personal Favorites (see [Favorite search](#) on page 59), which is always the first search in the list. The Search title is automatically updated when you click it.

- To create a new search, click the **Search** menu, then click **New Search**. The Search dialog opens.
- To edit a saved search, double-click the search title, or launch the Search dialog (as above), then click **Load Search**.

Setting search parameters

To start a new search, in the **Search** menu, click **New Search ...** to open the Search dialog, which you can use to set the following options:

Stations	Select All or None using the appropriate buttons at the bottom of the list. To use selected stations, click the station names to highlight them.
Program Categories	Select All or None using the appropriate buttons at the bottom of the list. To use selected categories, click the category names to highlight them.
Date/Time Ranges	Use the pull-down items to select date ranges, and the check boxes to select the hours you wish to include in your search.
Rating	Highlight one or more entries in this list to search for movies with specific quality ratings.
MPAA	Highlight one or more entries in this list to search for movies with specific MPAA ratings.
Parental Guidance	Highlight one or more entries in this list to search for movies with specific ratings.
Text Search	Enter names, titles, and/or keywords in the text box. Check the Title , Desc , and/or Performers boxes to search the appropriate fields for the text.
Year of Release	Use the pull-down items to search for movies before, after, or within specific years.

Use the icons at the top of the Search dialog to:

- Create a new search
- Load an existing search
- Save the current search criteria
- Run the current search
- Exit the search dialog

Sports tab

The Sports tab displays all sports sub-categories for all sporting events in the current listings, on the left side of your screen. Click the category on the left side of the screen for which you want to display all titles. Titles will appear on the right side of the screen.

- If you have the **Use Station List** checkbox in the Filter options checked (see *Filter options* on page 58), only those stations in the currently-selected station list are displayed.
- Use the arrow keys to scroll up, down, left, or right. You can also scroll using the horizontal and vertical scroll bars.
- Scroll to a specific program to display its details in the area above the log.
- To display just the stations you want, use the **Station Lists ...** option in the **Edit** menu (see *To customize channels* on page 55).

Stations tab

The Stations tab displays listings for each station, on the left side of your screen. Click the station you want, or use the arrow keys to move up or down the list. The listings for that station are displayed on the right side of your screen.

There are two ways to view listings in the Stations tab. You control how the listings are displayed via the Stations tab **Format** option. **Log view** is the standard view. Each station is shown in its own, rolling log. **Grid view** can be activated from the **Grid Mode** option of the **View** menu (see *Views* on page 57). Each station is shown as a 24-hour grid.

- Use the arrow keys to scroll up or down. You can also scroll using the horizontal and vertical scroll bars.
- Scroll to a specific program to display its details in the area above the list.
- To display just the stations you want, use the **Station Lists** option in the **Edit** menu (see *To customize channels* on page 55).

Titles tab

The Titles tab displays all titles in the current listings, on the left side of your screen. Click a title to display all show times for that title, on the right side of your screen.

- Use the arrow keys to scroll up or down. You can also type a partial or full Title name in the textbox above the Title list, and quickly jump to a particular title.
- Scroll to a specific program to display its details in the area above the log.
- To display just the stations you want, use the **Station Lists ...** option in the **Edit** menu (see [To customize channels](#) on page 55).

Days and dates

Each view contains listings for the current date. To change the date, select the date you wish to view from the **Dates** menu at the top of the screen.

Stills Gallery

The still images you capture from TV, Video CD, or File Player are saved in the Stills Gallery. You can save images in a variety of graphics formats and sizes. The Stills Gallery controls let you delete images, hide them, save them as wallpaper, and print them.

You can check multiple Capture options in the Stills Gallery Setup page. Still images can be captured to the Stills Gallery, numbered files, clipboard, and printer, all at the same time.

If you close the Stills Gallery without saving, your captured still images are **deleted**.

When you click the logo in the upper left corner of the Stills Gallery, the “About...” notice appears. If you have more than one Multimedia Center feature installed, a Task menu displays available and active features.

For information about using the Stills Gallery controls, see the online help and Tool Tips.

Stills Gallery settings

Use the Stills Gallery Setup page to define how the Stills Gallery saves and prints captured images.

To set up the Stills Gallery

 Click the Setup button in the Stills Gallery, TV, File Player, or Video CD control panel, then click the **Stills Gallery** tab.

Selection	Function						
<p>Capture Options</p>	<p>Capture to Gallery Captures still images to the Stills Gallery.</p> <p>Capture to numbered file Stores captured images in numbered files (pic001.bmp, pic002.bmp ...) on your hard disk.</p> <p>Capture to clipboard Places captured images on the Windows Clipboard.</p> <p>Capture to printer Send the captured image to the printer.</p> <p>Use only 256 colors Saves captured images as 256-color files, to save memory.</p>						
<p>Save Options</p>	<p>Warn if closed without saving Alerts you if you close Television or the Stills Gallery without saving captured images.</p> <p>Show paths of saved images Displays the drive, folders, and subfolders that contain saved images.</p>						
<p>Tool Tips</p>	<p>Show Tool Tips Display tool tips for the Stills Gallery controls.</p> <p>Show Short Cut Display shortcut keys for the Stills Gallery controls.</p>						
<p>Always on top</p>	<p>Keep the Stills Gallery on top of other applications.</p>						
<p>Print Options</p>	<p>Center image Print image in center of page.</p> <p>Image size:</p> <table border="0"> <tr> <td>Maximize</td> <td>Print in full-page format.</td> </tr> <tr> <td>One to one</td> <td>Print same size as original.</td> </tr> <tr> <td>Double</td> <td>Print twice original size.</td> </tr> </table>	Maximize	Print in full-page format.	One to one	Print same size as original.	Double	Print twice original size.
Maximize	Print in full-page format.						
One to one	Print same size as original.						
Double	Print twice original size.						

CD Audio

Use CD Audio to play standard audio CDs. Advanced features such as Random play, Intro play (which plays the first ten seconds of each track) and Loop play are available. The Schedule feature lets you schedule CD playback on dates and times you specify (see [Schedule](#) on page 110).

When you click the logo in the control panel, the “About...” notice appears. If you have more than one feature installed, a Task menu displays available and active features.

For information about using CD Audio controls, see the online help and Tool Tips.

To start CD Audio

from LaunchPad

Click the CD Audio button in the

Launchpad. For information on LaunchPad, see [page 2](#).

from Windows® taskbar

- 1** In the Windows taskbar, click **Start**, then point at **Programs ▶**.
- 2** Point at **ATI Multimedia Center ▶**, then select **CD Audio**.

 You can also start CD Audio from other Multimedia Center features. Click the ATI logo in the feature’s control panel or display panel, then click **CD Audio**.

CD Audio keyboard shortcuts

You can use the following keys to control CD Audio from your keyboard.

Command	Key(s)
Pause	Ctrl + B
Play	Ctrl + X
Stop	Ctrl + Z
Toggle Play / Pause	Spacebar
Eject	Ctrl + E
Volume up / down	(numeric keypad) - / + ← / → (alphanumeric keypad) _ / =, - / +
Setup	Ctrl + S
Help	F1

CD Audio settings

Use the CD Audio Settings page to set up playlists and shuffle play, and to use an LCD panel for track number and playback time.

To set up CD Audio

Click the Setup button in the CD Audio control panel, then click the **CD Player Settings** tab.

Selection	Function
Play List	Displays all tracks in the playlist (the list of your selections).
Shuffle Play	<p>Shuffle all tracks Play all tracks in random order.</p> <p>Shuffle user playlist Play playlist in random order.</p>
Disc Information	If the information is available, displays the name of the disc and the artist. You can also type in the information.
Available Tracks	Displays the tracks that you can add to the playlist. Use the buttons to add or remove selected tracks or all tracks.
LCD Display	Check to display track number and current playback time on an LCD display.
Tool Tips	<p>Show Tool Tips Display tool tips when you point at a control with your mouse.</p> <p>Show Shortcut Display keyboard shortcuts when you point at a control with your mouse.</p>

CD Audio preferences settings

The Preferences settings page lets you control Power Management settings in CD Audio.

To open the Preferences settings page

-  Click the Setup button in the CD Audio control panel, then click the **Preferences** tab.

*Click the **Help** button on this settings page for more information on Power Management.*

CD Database

If you are connected to the Internet, you can use the CD Database to display album title, artist, song names, and other information on your computer as your CD plays.

When you put an audio CD in your CD-ROM drive, the CD Audio program can query a global CDDDB[®] server for information about the disk. If the database contains information for your disk, CD Audio downloads and displays the data.

- Access to the CDDDB service is free of charge to end-users.

To open the CD Audio CD Database page

-  Click the CD Database button in the control panel.
-  Or click the Setup button in the CD Audio control panel, then click the **CD Database** tab.

Selection	Function
Server Address of CDDDB server (default: cddb.cddb.com)	Port Port to use with this CDDDB server (default: 8880). Get Sites List from Server Get sites list from server using current settings.
Protocol	CDDBP Use direct TCP/IP connection. HTTP Use the HTTP connection if you are behind a firewall. A CGI script must be defined (default: /-cddb/cddb.cgi)

Selection	Function
Proxy Server Access the database using a proxy server	Server Address of proxy server (a proxy server is another computer on your LAN that connects to the Internet without compromising the security of your network). Port Port to use with proxy server. Requires Proxy Authentication This proxy server requires authentication.
Dial-Up Networking Use dial-up networking when accessing the server.	Use this connection when making remote queries When not connected, connect using this entry. Only perform remote queries when connected Access the database only when already connected.
Disable CD Database	No queries are performed when this box is checked.

CD Audio Schedule settings

You can schedule CD Audio to play on the dates and times you specify. If you have the features installed, you can also schedule events for TV Magazine, Personal Video Recorder, File Player, and TV.

To open the CD Audio Schedule settings page

Click the Setup button in the CD Audio control panel, then click the **Schedule** tab. The Schedule Wizard will guide you through creating new scheduled events. See [Schedule](#) on page 110 for details.

Video CD

Video CD plays Video CD 1.0 CDs, Video 2.0 Interactive CDs, and Karaoke CDs.

When you click the logo in the upper left corner of the display panel, the “About...” notice appears. If you have more than one feature installed, a Task menu displays available and active features.

For information about using Video CD controls, see the online help and Tool Tips.

To start Video CD

from LaunchPad

Click the Video CD button in the

Launchpad. For information on LaunchPad, see [page 2](#).

From Windows® taskbar

- 1** In the Windows taskbar, click **Start**, then point at **Programs ▶**.
- 2** Point at **ATI Multimedia Center ▶**, then select **Video CD**.

You can also start Video CD from other Multimedia Center features. Click the ATI logo in the feature’s control panel or display panel, then click **Video CD**.

Video CD Feature menu

You can access Video CD functions by right-clicking on the video viewing area or the control panel. This is very useful in full-screen mode.

Selection	Function
Setup	Open the Video CD setup page.
Eject CD	Eject the video CD from the drive.
Play	Play the loaded Video CD.
Pause	Pause playback.
Stop	Stop playback.
Display Size	50% Display video at 1/2 size. 75% Display video at 3/4 size. 100% Display video full size. 200% Display video at double size. Full Screen Display video in full screen, no borders.
Show Controls	Display the Control panel.
Audio Channels	Click to select audio tracks for dual-mode MPEG CDs: Stereo Stereo audio playback. Both Channels Both audio channels active. Left Channel Left channel audio only. Right Channel Right channel audio only.
Movie Scale	Show Time Display scale in time. Show Frames Display scale in frames. Time Remaining Display time remaining in current CD. Total Time Display total time of current CD.
Zoom	Unzoom Return to normal display. Zoom 2x Zoom to double size. Zoom 4x Zoom to 4 times size. Zoom 8x Zoom to 8 times size.
About...	Display the About... dialog.
Exit	Close the Video CD program.

Video CD keyboard shortcuts

You can use the following keys to control Video CD from your keyboard.

Command	Key(s)
Pause	Ctrl + B
Play	Ctrl + X
Toggle Play / Pause	Spacebar
Skip forwards / backwards	End / Home
Eject	Ctrl + E
Volume up / down	(numeric keypad) - / + ← / → (alphanumeric keypad) _ / =, - / +

Hide control panel	F2
Hide video panels and borders; video panel snaps to edge	F3
Always on top	F4

Capturing still frames from Video CDs

To capture still frames from Video CDs

-  Click the Capture button in the Video CD control panel. The current frame is placed in the Stills Gallery (see [Stills Gallery](#) on page 65).

Zooming and Panning

You can zoom in on the video in the Display panel to enlarge a selected portion of the screen, and return your display to normal.

To zoom in

Click within the display panel, then hold down the mouse button and draw a rectangle around the area you want to zoom.

-  Or right-click the 1:1 button in the control panel to open a menu where you can set the zoom level — Zoom x2, Zoom x4, or Zoom x8.

To pan in the zoomed area

Click and drag your mouse within the zoomed area to pan horizontally or vertically.

To zoom in the zoomed area

Hold down the Shift key, and draw another rectangle in the zoomed area.

To unzoom or use predefined zoom levels

Right-click in the display panel to open the Feature Menu (see [Video CD Feature menu](#) on page 73), then click **Zoom**, and select Unzoom, Zoom x2, Zoom x4, or Zoom x8.

-  Or click the 1:1 button to unzoom, or right-click the button to open a menu where you can set the zoom level — Zoom x2, Zoom x4, or Zoom x8.

Video CD Display settings

Use the Video CD Display settings pages to set up video size and general operation.

To open the Video CD Display settings page

Click the Setup button in the Video CD control panel, then click the **Display** tab.

<i>Selection</i>	<i>Function</i>
Video Size	Choose playback size: 50%, 75%, 100%, 200%, or Fullscreen. If the current panel does not support resizing, the values are greyed-out.
Tool Tips	<p>Show Tool Tips Show tool tips when you point at controls with your mouse.</p> <p>Show Shortcuts Show keyboard shortcuts when you point at controls with your mouse.</p>
Always on top	Keep Video CD on top of other applications.
Keep Aspect Ratio	Maintain the width-to-height ratio when you resize or zoom the display.
Autohide Controls in Full screen	Automatically hide Video CD controls when playing full-screen.

Video CD Closed Caption settings

The Closed Caption settings page lets you specify how closed captioned text is displayed – over video or in a window – and the preferred language, the font, and the font color for the window.

Selection	Function
Video Window	<p>Off Do not display closed captioned text.</p> <p>English Display closed captioned text.</p> <p>Hangul Display Hangul text.</p> <p>Font Select the font for the video window and the background style (solid or semi-transparent).</p>
Second Window	<p>Off Do not open the second window.</p> <p>Single Language</p> <p>English Only Display English text.</p> <p>Hangul Only Display Hangul text.</p> <p>Both Languages</p> <p>Horizontally Display English and Hangul, side-by-side, divided by the slider.</p> <p>Vertically Display “layered” view: English, Hangul, English ...</p> <p>Font Select the font for the second window, and the foreground and background color scheme.</p>

Video CD Preferences settings

Use the Video CD Preferences settings page to set up general characteristics for your player.

To open the Video CD Preferences settings page

-  Click the Setup button in the Video CD control panel, then click the **Preferences** tab.

Selection	Function
Movie Scale	<p>Show Time Display scale in time.</p> <p>Show Total Time Display the total time of the playing video CD or file.</p> <p>Show Time Remaining Display the remaining time in the playing video CD or file.</p>
General Settings	<p>Automatically play CD if present Automatically play a loaded CD.</p>
Power Management	<p>Select one of the following levels:</p> <p>Always Power management always enabled.</p> <p>Disabled while playing Power management is disabled while a CD is playing.</p> <p>Allow display to turn off while paused Only the display turns off when playback is paused.</p> <p>Disabled Power management is never enabled.</p>

Video CD Stills Gallery settings

You can capture still images from Video CDs, and save them in the Stills Gallery.

To open the Video CD Stills Gallery settings page

-  Click the Setup button in the Video CD control panel, then click the **Stills Gallery** tab. For information on the Stills Gallery, see [Stills Gallery](#) on page 65.

DVD

DVD (Digital Versatile Disc) is a high-density format that provides as much as 17 Gigabytes of storage — 25 times more than a CD-ROM. This vastly increased capacity lets you view a full-length movie or play games that used to require multiple CDs.

When you click the logo in the upper left corner of the display panel, the “About...” notice appears. If you have more than one feature installed, a Task menu displays available and active features.

For information about using the DVD controls, see the online help and Tool Tips.

To start DVD

from LaunchPad

Click the DVD button in the Launchpad.

For information on LaunchPad, see [page 2](#).

from Windows® taskbar

- 1 In the Windows taskbar, click **Start**, then point at **Programs ▶**.
- 2 Point at **ATI Multimedia Center ▶**, then select **DVD**.

 You can also start DVD from other Multimedia Center features installed on your system. Click the ATI logo in the feature’s control panel or display panel, then click **DVD**.

What can I play on my DVD drive?

You can play all video discs, including encrypted (copy-protected) and interactive titles.

Sizing the Video Display panel

You can resize the video display panel by using your mouse to drag an edge, and you can use the ALT or CTRL key to display these preset screen sizes:

50% of original size	Alt / Ctrl+1
75% of original size	Alt / Ctrl+2
100% of original size	Alt / Ctrl+3
Toggle full-screen	Alt / Ctrl+4 Full screen
	Ctrl+F Toggle full screen
	Esc Exit full screen

Full-screen controls

When you play DVD discs in full-screen mode, the Player controls appear at the bottom of your screen. You can use the following keys to return to windowed video, and hide or show the on-screen controls.

Alt / Ctrl + F	Toggle full-screen mode.
Esc	Exit full screen mode.
F2	Hide / Show the on-screen controls.

DVD feature menu

You can access DVD functions by right-clicking on the video viewing area or the control panel. This is very useful when you play files in full-screen mode.

Selection	Function
Setup	Opens the Preferences page.
Hide controls	Hides the full-screen controls (see Full-screen controls on page 80).
Eject	Opens/closes the DVD drive tray.
Resume	Continues play, after pausing
Play/Pause	Toggles between play and pause.
Stop playing	Stops play.
Play at specific part	Search for a specific location on the disc (see Searching DVD discs on page 87).
Restart program	Starts play at the beginning of the file.
Go Up	Goes up in a playlist.
Menu	Displays a "menu of menus" (see Using the menus on page 86).
Subtitle	Displays a menu of subtitle language choices (see Setting up subtitles on page 85).
Audio	Displays a menu of audio streams (see Selecting audio channels on page 85).
Angle	Displays a menu of camera angles (see Selecting viewing angle on page 87).
Parental Control	Displays a menu of parental level settings.
Blended Window	The video window appears as a translucent layer on top of any other windows, allowing you to work and watch DVD movies at the same time.
Search	Search for any title or chapter.
Zoom	Zoom 2x, 4x, 8x, Unzoom.
About...	Displays the About... dialog.
Exit	Closes DVD.

DVD keyboard shortcuts

You can use the following keys to control DVD from your keyboard.

Command	Key(s)
Help	F1
Show / hide controls	F2
Play / Pause	Spacebar
Pause	Ctrl + B
Play	Ctrl + X
Stop playback	Ctrl + Z
Toggle Play / Pause	Spacebar
Skip forwards / backwards	End / Home
Volume up / down	(numeric keypad) - / + (alphanumeric keypad) _ / =, - / +
Mute audio	(numeric keypad) *
Skip to previous chapter	Home
Scan backwards	Page Up
Scan forwards	Page Down
Skip to next chapter	End
Select menu option	Return
Resume playback	Backspace
0 - 9	Enter number 0 - 9

Command	Key(s)
Move selection up	↑
Move selection down	↓
Move selection left	←
Move selection right	→
Display at 50%	Alt / Ctrl + 1
Display at 75%	Alt / Ctrl + 2
Display at 100%	Alt / Ctrl + 3
Display at 200%	Alt / Ctrl + 4
About	Alt + A
Setup	Alt + S
Exit	Alt / Ctrl + F4
Toggle Always On Top	Alt / Ctrl + T
Eject disk	Alt / Ctrl + E
Minimize	Alt / Ctrl + M
Increase display size	Alt / Ctrl + ↑
Decrease display size	Alt / Ctrl + ↓
Stereo	Ctrl + A
Go to Root menu	Ctrl + M
Open a dialog where you can play a specific title, chapter, or time	Ctrl + P
Restart from beginning of chapter	Ctrl + R
Closed caption	Ctrl + S
In a menu, select Go Up program, if available	Ctrl + U
Select viewing angle	Ctrl + V

Playing DVD-Video Discs

All DVD players and drives will read **audio CDs** and **CD-ROMs**, and play music from **Enhanced CDs** (CD Plus, CD Extra).

To play DVD discs

Place a DVD disc in your DVD drive, then click the Play DVD button in the File Open dialog. If you experience problems see [DVD problems](#) on page 121.

It is the nature of the DVD format that some commands and options are allowed at some times, and not allowed at others. The way the disc was authored determines this, so it can vary from one disc to another. The following examples illustrate some of these situations.

Audio selection disabled. Some DVD discs that include multiple languages forbid changing audio tracks during playback, which disables the Audio channel button. In these cases, the disc provides an audio language menu where you can select the audio track. There may be similar situations for Subtitle selection (see [Setting up subtitles](#) on page 85 or Viewing angle selection (see [Selecting viewing angle](#) on page 87).

- 1 Click the Menu button  in the control panel, then click the Root menu (or the Language menu, if available).
- 2 From the Root menu's Languages option, select the language.

Time search disabled. Some DVD discs disable searching by time; searching randomly through the disc is prohibited, and skip forward, skip back, and seek slider buttons are disabled. Usually, the next program and previous program buttons continue to function. The Play specific buttons will work, but you can only select title and chapter (not time).

Stop disabled. The “FBI warning” often disables the Stop button until the warning has played. The Skip forward and Next program buttons have no effect until the warning is complete.

Selecting audio channels

When you view a standard DVD-Video disc that has multiple audio streams, clicking the audio channel button displays a pop-up menu of available audio streams. The currently-playing channel is checkmarked.

- DVD-Video Discs can support up to eight audio channels, but not all discs provide them.

Setting up subtitles

Click the subtitle selection button in the DVD control panel to display a menu of subtitle language choices. Click the language you want for subtitles. The selected language is checkmarked.

- DVD-Video Discs support up to thirty-two subtitle languages.

External subtitles

The External Subtitles feature lets you view subtitles in languages not provided on the DVD disc. The DVD Player supports two of the most common subtitle formats: MicroDVD Player and SubViewer 2.0. Using third-party conversion tools available on the Internet, you can easily convert other subtitle file formats into MicroDVD and SubViewer 2.0 format.

MicroDVD requires a value for frames per second; if the DVD movie does not indicate the frame rate, try these standard values: 23.976, 24, 25, 29.97, 30.

You can display external subtitles over the video or in a separate window. When you display subtitles in a separate window, you can double-click the external subtitle text to jump to that point in the movie.

If the external subtitle text is not synchronized with the video, incorrect time coding in the external subtitle file is usually the cause. Third-party tools are available to correct this.

To set up external subtitles

Click the Closed Caption button in the DVD control panel, then click the **Set External Subtitle** button, and select your subtitle file.

You can add and remove DVDs from the External Subtitle list, change the DVD's title, and adjust the frame rate.

Using the menus

Click the Menus button in the DVD control panel. A pop-up “menu of menus” opens, where you can select a menu to jump to. Standard DVD-Video Discs provide up to six menus:

- Title (usually, a whole movie or album)
- Root
- Audio
- Sub-picture (sub-pictures overlay the video, and are used for subtitles, karaoke, menus, simple animation, etc.).
- Angle
- Chapter

Searching DVD discs

DVD-Video Disc content consists of “titles” (movies or albums), and “parts of titles” (chapters or songs). Use Search to go to a specific location on the disc.

Click the Search button in the DVD control panel to open the search dialog. You can search DVD discs for:

- Title (usually a whole movie or album)
- Title and Chapter (a Chapter is part of a Title).
- Time within the current Title and Chapter in HH:MM:SS:FF format (HH=hour, MM=minute, SS=second, FF=frame).

You can also use the DVD Feature Menu to search for titles and chapters (see [DVD feature menu](#) on page 81).

Selecting viewing angle

Click the Angle button in the DVD control panel to display a menu of camera angles. The selected angle is checkmarked.

- Even when a disc is encoded with multiple viewing angles, there may be sections with only a single available angle.

Parental Control

Parental Control lets you restrict access to selected material by requiring password access. Click the Parental Lockout button in the DVD control panel to display a menu of parental level choices. The selected level is checkmarked.

- When a parental level is selected, a password dialog appears. A password is required to change parental levels.

Zooming and Panning

You can zoom in on the video in the Display panel to enlarge a selected portion of the screen, and return your display to normal.

To zoom in

Click within the display panel, then hold down the mouse button and draw a rectangle around the area you want to zoom.

 Or right-click the 1:1 button to open a menu where you can set the zoom level— Zoom x2, Zoom x4, or Zoom x8.

To pan in the zoomed area

Click and drag your mouse within the zoomed area to pan horizontally or vertically.

To zoom in the zoomed area

Hold down the Shift key, and draw another rectangle in the zoomed area.

To unzoom or use predefined zoom levels

Right-click in the display panel to open the Feature Menu (see [DVD feature menu](#) on page 81), then click **Zoom**, and select Unzoom, Zoom x2, Zoom x4, or Zoom x8.

 Or click the 1:1 button to unzoom, or right-click the button to open a menu where you can set the zoom level — Zoom x2, Zoom x4, or Zoom x8.

THRUIVIEW™

If your computer uses a RADEON or later video card, THRUIVIEW Desktop and THRUIVIEW Window are available.

THRUIVIEW Desktop. The current panel appears full-screen as a translucent layer on top of all other windows when minimized.

THRUIVIEW Window. The current panel appears as a translucent layer on top of any other windows, allowing you to work and watch DVD movies at the same time.

When you select THRUIVIEW Desktop or THRUIVIEW Window in the Display Settings page (see [DVD Display settings](#) on page 92), minimizing DVD displays a blended desktop or blended window.

A DVD icon appears in the “tray” on the right side of the Windows taskbar. Click the DVD icon to display the blend control panel, which you can use to adjust the blend level and control the volume.

You can also enable THRUIVIEW Window when DVD is not minimized: right-click the display panel or the control panel, then in the Feature menu, click **THRUIVIEW Window**.

To restore your desktop pattern and DVD, click the **DVD** button in the Windows taskbar.

Bookmarks

When you first install your DVD Player, you can create bookmarks, which you can use to mark sections of a DVD disc. When you load a DVD, if the Player finds a current bookmark, it starts playing from that point.

Each time the Player creates a bookmark or exits the Setup Wizard, it sorts bookmarks by creation date, and deletes bookmarks older than the expiry date you specified. To ensure that the maximum number of bookmarks is not exceeded, the Player deletes bookmarks, starting with the oldest.

The Power Management bookmark is never deleted (see *Power Management* in [DVD Preferences settings](#) on page 93).

Chapter Preview

When you eject a DVD disc before the movie is over, and then restart playback, Chapter Preview displays an on-screen message asking if you want to preview the previous chapters.

You must enable Bookmarks in order to use Chapter Preview.

When you click the Play button, the Player plays the first ten seconds of each chapter, up to the point where you stopped.

If you do nothing, playback resumes from the point where you stopped.

When you click Stop, Previous/Next Chapter, A/B Repeat, or move the position slider, playback starts from the point where you stopped.

When you click the Pause button, Chapter Preview pauses. When you click Play, Chapter Preview plays another ten seconds of the current chapter.

If you exit the Player or restart playback by changing settings in the Audio Setup page (see [DVD-Video audio settings](#) on page 97), Chapter Preview asks if you want to preview again.

If you jump to any menu (see [Using the menus](#) on page 86) or change a Parental Control Setting (see [Parental Control](#) on page 87), Chapter Preview stops.

A/B Repeat

You can play a section of a DVD disc by setting a start point (A) and an end point (B) in the disc, and play that section continuously.

1 Click the A/B Repeat button once to set the start point. Playback continues.

2 Click the A/B Repeat button again to set the end point. Looped playback begins from the start point to the end point.

Pressing the A/B Repeat button again cancels looped playback, and playback continues from the current point.

After you set the start point, navigating or opening a menu cancels creation of the loop; if the loop is already playing, it will stop.

DVD Display settings

The Display settings page lets you control how video is displayed in DVD.

To open the Display settings page

-  Click the Setup button in the DVD control panel, then click the **Display** tab.

Selection	Function
Display Size	Display video at 50%, 75%, 100%, or full screen.
Options	<p>Keep Aspect Ratio Maintains the aspect ratio (width-to-height ratio) when you resize the display.</p> <p>Always on Top Always displays the Player on top of other windows.</p> <p>Auto Hide in Full Screen Automatically hides controls in full-screen mode if no user interaction occurs. Controls automatically re-appear if you move the mouse.</p> <p>When Minimized Controls how DVD behaves when minimized:</p> <p>Minimize DVD DVD becomes an icon on the taskbar.</p> <p>THRUVIEW Window The DVD display window appears as a translucent layer on top of your other applications.</p> <p>THRUVIEW Desktop The DVD display appears full screen, as a translucent layer on top of all other windows.</p>
Tool Tips	<p>Show Tool Tips Displays helpful aids for using DVD.</p> <p>Show Shortcut Displays shortcut keys.</p>

DVD Preferences settings

The Preferences settings page lets you control some of the DVD default values.

To open the Preferences settings page

Click the Setup button in the DVD control panel, then click the **Preferences** tab.

Selection	Function
Preferred Language	<p>Select a 1st choice and a 2nd choice for your preferred language.</p> <ul style="list-style-type: none"> • DVD automatically selects the audio stream and subtitles to match the 1st choice. • If the 1st choice is not available, the 2nd choice is used. • If neither 1st or 2nd choice is available, the Player uses the first available audio and sub-picture stream. • You can use the Subtitles button to change languages during playback (see Setting up subtitles on page 85).
Power Management	<p>Select one of the following levels:</p> <ul style="list-style-type: none"> • Always (power management always enabled). • While not playing • Display to turn off while paused (only the display turns off when playback is paused). • Never
Enable Subtitles Always	Always display subtitles.
Show Subtitles When Muted	Display subtitles whenever the audio is muted.

DVD Initialization Wizard

When you click the **Initialization Wizard** button, the second page of the Wizard provides options for controlling bookmarks:

<i>Selection</i>	<i>Function</i>
Enable Bookmarks	Bookmarks allow you to resume playback from where you left off when last viewing the DVD. Maximum number of bookmarks to keep Enter the number of bookmarks that DVD should record. Bookmarks expire after this many days Enter the number of days to keep bookmarks.

DVD-Video settings

The Video Settings page lets you control how video is displayed in DVD.

To open the DVD-Video settings page

Click the Setup button in the DVD control panel, then click the **Video** tab.

<i>Selection</i>	<i>Function</i>
Brightness	Adjusts the intensity of light in your display.
Saturation	Adjusts the richness of color (determined by the amount of grey in a color) in your display.

DVD Closed Captioning

Display closed captioned text over video, and/or in a separate window beside the video. When you use the separate window, you can use the scrollbar to review the last few minutes of text. You can set the background color, the font, and the font color for the window.

The author must have specifically included closed captioning in order for it to be available. Most movies include subtitles, and not closed captions (see [Setting up subtitles](#) on page 85.)

To display closed captioned text

Click the Closed Caption button in the DVD control panel.

To close the Closed Captioning window, click the Exit button.

Closed Caption settings

The Closed Caption settings page lets you specify how closed captioned text is displayed — over video or in a window — and the background color, the font, and the font color for the window.

To set up closed captioning

Click the Setup button in the DVD control panel, then click the **Closed Caption** tab.

<i>Selection</i>	<i>Function</i>
Placement	<p>External Window Displays closed captioned text in its own window. Click Font... to select the display font.</p> <p>Video Window Displays closed captioned text superimposed on the video. Click Font... to select the display font.</p> <p>Solid Background Displays closed captioned text on a solid background.</p> <p>Shaded Background Displays closed captioned text on a shaded background.</p>
Closed Caption On Mute	Display closed captioned text when the audio is muted.

DVD-Video audio settings

the Audio settings page lets you control how DVD handles audio.

The Multimedia Center supports standard DVD-Video, which provides stereo and compressed, multi-channel surround sound using Dolby® Digital or DTS® encoding. DVD-Audio (DV-A) is a separate standard, which requires a DVD-Audio player.

To open the Audio settings page

Click the Setup button in the DVD control panel, then click the **Audio** tab.

Selection	Function
Multi-Channel Audio options	<p>Decode and down-mix to 2 channels The audio decoder “passes-through” non-PCM multichannel audio or 2-channel audio as LPCM (normal).</p> <p>Pass through to audio device Some audio cards may incorrectly report several audio devices that support non-PCM audio input (Dolby® Digital, DTS, etc.). For correct operation, you should specify the audio device you want to use.</p> <ul style="list-style-type: none"> • If only one audio device reports support for non-PCM audio, the audio device selection is greyed-out and displays the only choice. • If no audio devices report support for non-PCM audio, only the Decode and down-mix to 2 channels is available.
Dolby Options	<p>Stereo Play audio in 2-channel stereo.</p> <p>Dolby® Pro Logic® Play audio using Dolby Pro Logic.</p>

S/PDIF

S/PDIF (Sony/Philips Digital Interface) allows transfer of digital audio from one location to another without analog conversion; it is the standard format for exchanging digital audio signals between consumer audio components. Connections can be coaxial or optical.

You can connect your ALL-IN-WONDER's audio output directly to an S/PDIF amplifier or speaker set; for details, see the Installation and setup User's Guide that came with your ALL-IN-WONDER card.

- S/PDIF is not compatible with analog audio. You must have a Dolby Digital 5.1 channel A/V receiver to use S/PDIF; enabling S/PDIF with an analog receiver will not provide audio.
- If you are using regular speakers on your PC, but do not hear audio while playing a DVD, ensure that the **Enable S/PDIF output** box is not checked.
- High quality audio cables can be used for short lengths; good 75-ohm cable and good 75-ohm connectors can provide lengths up to 25 feet.

DVD Advanced Aspect Ratio settings

When you play a DVD in full screen mode, the Advanced Aspect Ratio settings page lets you control the width-to-height ratio of video displayed in DVD. This feature is useful for fine-tuning your display for wide-screen and projection TVs. Full-screen, letterbox, and standard 4:3 aspect ratios are available.

To enable Advanced Aspect Ratio

 Click the Setup button in the DVD control panel, click the **Advanced Aspect Ratio** tab, then click **Enable Advanced Aspect Ratio**, and select the aspect ratio.

- You can enter values in the Dynamic Aspect Ratio dialog box, or drag the window margins using your mouse.

*Some discs may not support the aspect ratio you select. For example, selecting letterbox for a disc that contains only 4:3 data will **not** provide letterbox playback.*

Selection	Function
Enable Advanced Aspect Ratio	This option lets you make selection in the controls listed below.
Aspect Ratio   	Sets the default aspect ratio for all DVD content using DVD. Fullscreen The movie fills the entire screen, regardless of desktop or movie resolution. Letterbox Shows a 16:9 movie on a desktop with 4:3 aspect ratio. Black bars appear at the top and bottom of the screen to fill the remaining space. 4:3 Shows a 4:3 movie on a desktop with 16:9 aspect ratio. Black bars appear on either side of the screen to fill the remaining space.
Known DVDs	By clicking the Add button while a DVD disc is inserted, you can add this disc to a list, and set a custom aspect ratio for this title only. Click the Aspect Ratio button beside the desired title entry in the list to select an aspect ratio from the pull-down menu. <ul style="list-style-type: none"> • In the future, if possible, DVD will play this title using the aspect ratio you selected. To remove a title from the list, select it, then click Remove .

DVD Schedule settings

If you have the features installed, you can schedule events for TV Magazine, Personal Video Recorder, File Player, and TV.

To open the DVD Schedule settings page

 Click the Setup button in the DVD control panel, then click the **Schedule** tab. The Schedule Wizard will guide you through creating new scheduled events. See [Schedule](#) on page 110 for details.

Region codes

There are six region codes, or “country codes”, which are used to prevent playback of certain discs in certain geographical regions. DVD players will not play discs that are not allowed in the region.

If you insert a DVD disc whose region code is different from the currently-set value, a dialog appears where you can change the region code for your location.

<i>You can only change Region Codes five times.</i>	
Region 1	The U.S., U.S. territories and Canada
Region 2	Europe, Japan, the Middle East, Egypt, South Africa, Greenland
Region 3	Taiwan, Korea, the Philippines, Indonesia, Hong Kong
Region 4	Mexico, South America, Central America, Australia, New Zealand, Pacific Islands, Caribbean
Region 5	Russia, Eastern Europe, India, most of Africa, North Korea, Mongolia
Region 6	China

File Player

Use the File Player to play various multimedia file formats. The types of file you can play depends on your system's software. For example, MPEG-2 file playback is available if software such as ATI's DVD Player or other MPEG-2 decoders is installed.

You can play the following, multimedia files:

- AVI
- MPEG (.mpg, .mpeg)
- MP (.mp3, .mp2)
- MIDI (.mid)
- WAV (.wav)
- VCR (.vcr: proprietary ATI video format – Personal Video Recorder files recorded from the Multimedia Center TV feature)

When you play MP, MIDI, or WAV files, the video panel does not appear.

For information about using File Player controls, see the online help and Tool Tips

To start File Player

from LaunchPad

Click the File Player button in the Launchpad.

For information on LaunchPad, see [page 2](#).

from Windows® taskbar

- 1** In the Windows taskbar, click **Start**, then point at **Programs ►**.
- 2** Point at **ATI Multimedia Center ►**, then select **File Player**.

File Player Feature menu

You can access File Player functions by right-clicking on the video viewing area or the control panel. This is very useful when you play files in full-screen mode.

Selection	Function
Setup	Open the File Player Setup page.
Hide/Show Controls	Hide the File Player Control panel.
Play	Play the current file.
Stop	Stop playing.
Time display mode	Set time mode: Elapsed Time Remaining Time Total Time
Zoom Mode	Set Zoom: Unzoom, Zoom 2x, Zoom 4x, Zoom 8x.
Video Size	Set playback size: 50%, 75%, 100%, 200%, Full Screen.
THRUVIEW™	If your computer uses a RADEON or later video card, THRUVIEW Desktop and THRUVIEW Window are available. <i>THRUVIEW Desktop:</i> The current panel appears full-screen as a translucent layer on top of all other windows when minimized. <i>THRUVIEW Window:</i> The current panel appears as a translucent layer on top of any other windows, allowing you to work and play files at the same time.
About...	Displays the "About" dialog.
Exit	Closes the File Player.

File Player shortcut keys

You can use the following keys to control File Player from your keyboard.

Command	Key(s)
Pause	Ctrl + B
Play	Ctrl + X
Toggle Play / Pause	Spacebar
Stop	Ctrl + Z
Skip forwards / backwards	End / Home
Next / previous track	Page Up / Page Down
Volume up / down	(numeric keypad) - / + ← → (alphanumeric keypad) _ / =, - / +
Toggle mute	(numeric keypad) *
Open file	Ctrl + O
Setup	Ctrl + S
Toggle closed captions	Ctrl + C
Unzoom	Alt + Z
Still capture	Ctrl + Insert
Size presets	Ctrl + 1 — Ctrl + 4
Toggle full screen	Ctrl + F
Exit full screen	Esc
Cycle through Size up / down	Ctrl + ↑ / Ctrl + ↓
Help	F1
Hide control panel	F2
Toggle Always on top	F4
THRUVIEW Desktop (Blended Desktop, regardless of setting in Display Setup page)	F6

Command	Key(s)
Minimize (without THRUVIEW)	F7
Reverse play (increments to next lower speed: -2x, -4x, -8x, -16x)	F9
Normal play	F10
Forward play (increments to next higher speed: 2x, 4x, 8x, 16x)	F11
Loop	Ctrl + A
Exit File Player	Alt + F4
About	Alt + A

THRUVIEW™

If your computer uses a RADEON™ or later video card, THRUVIEW Desktop and THRUVIEW Window are available.

THRUVIEW Desktop. The current panel appears full-screen as a translucent layer on top of all other windows when minimized.

THRUVIEW Window. The current panel appears as a translucent layer on top of any other windows, allowing you to work and play files at the same time.

When you select THRUVIEW Desktop or THRUVIEW Window in the Display Settings page (see [File Player Display settings](#) on page 107), minimizing File Player displays a blended desktop or blended window.

A File Player icon appears in the “tray” on the right side of the Windows taskbar. Click the File Player icon to display the blend control panel, which you can use to adjust the blend level and control the volume.

You can also enable THRUVIEW Window when File Player is not minimized: right-click the video panel or the control panel, then click **THRUVIEW Window**.

To restore your desktop pattern and File Player, Click the File Player button in the Windows taskbar.

Zooming and Panning

You can zoom in on the video in the Display panel to enlarge a selected portion of the screen, and return your display to normal.

To zoom in

Click within the display panel, then hold down the mouse button and draw a rectangle around the area you want to zoom.

1:1 Or right-click the 1:1 button to open a menu where you can set the zoom level— Zoom x2, Zoom x4, or Zoom x8.

To pan in the zoomed area

Move your mouse within the zoomed area.

To zoom in the zoomed area

Hold down the Shift key, and draw another rectangle in the zoomed area.

To unzoom or use predefined zoom levels

Right-click in the display panel to open the Feature Menu (see [File Player Feature menu](#) on page 103), then click **Zoom**, and select Unzoom, Zoom x2, Zoom x4, or Zoom x8.

1:1 Or click the 1:1 button to unzoom, or right-click the button to open a menu where you can set the zoom level — Zoom x2, Zoom x4, or Zoom x8.

File Player Display settings

The Display settings page lets you control how video is displayed in the File Player.

To open the Display settings page

Click the Setup button in the File Player control panel, then click the **Display** tab.

Selection	Function
Video Size	Display video at 50%, 75%, 100%, 200%, or full screen.
Options	<p>LCD Display Display track number and current playback time on an LCD display.</p> <p>Always on Top Always display File Player on top of other applications.</p> <p>Auto Hide Controls when in Full Screen Automatically hides controls in full-screen mode if no user interaction occurs. Controls automatically re-appear if you move the mouse.</p> <p>Keep Aspect Ratio Maintains the aspect ratio (width-to-height ratio) when you resize the display.</p>
Time Mode	Set the time mode: Elapsed Time , Remaining Time , or Total Time .
Tool Tips	<p>Show Tool Tips Displays helpful aids for using the File Player.</p> <p>Show Shortcut Displays shortcut keys.</p>

File Player Preferences settings

The Preferences settings page lets you specify power management settings.

<i>Selection</i>	<i>Function</i>
Power Management	Select one of the following levels: Always Power management always enabled. Disabled while playing Power management is disabled while a CD is playing. Allow display to turn off while paused Only the display turns off when playback is paused. Disabled Power management is never enabled.

File Player Closed Caption settings

The File Player Closed Caption settings page lets you control how closed captions are displayed in File Player.

- File Player Closed Captioning is only available for ATI VCR files (ATI's proprietary video format).

Click the Setup button in the File Player control panel, then click the **Closed Caption** tab.

<i>Selection</i>	<i>Function</i>
Video Window	Displays closed captioned text superimposed on the video. Click Font... to select the display font.
External Window	Displays closed captioned text in its own window. You set this option in the Closed Caption Settings in the setup dialog.
Solid Background	Displays closed captioned text over a solid background.
Shaded Background	Displays closed captioned text over a shaded background.
Closed Caption On Mute	Displays closed captioned text when the audio is muted.

External Captions support

When you record video using TV-On-Demand (see [page 36](#)) or the Personal Video Recorder (see [page 39](#)), the associated closed caption information is added to the Media Library (see [page 50](#)). File Player can display the searchable, printable closed caption text in three ways:

- Over video in the video panel
- In the Closed Captioning Window
- Over video and in the Closed Captioning window simultaneously

The Closed Caption window contains a vertical scroll bar for navigating the closed caption text.

To enable External Captions support

Right-click the Closed Caption button on the control panel, then click **External Captions**.

To go to a particular location in the file

Double-click a specific section of text.

To print the closed caption text

Click the **Print** button.

To search the closed caption text

Click the **Search** button, then type the word to find. You can search from the current position or start from the beginning.

File Player Stills Gallery settings

You can capture still images from ATI VCR files, AVI files, and MPEG-1 files running in the File Player.

To open the File Player Stills Gallery settings page

 Click the Setup button in the File Player control panel, then click the **Stills Gallery** tab. For information on Stills Gallery, see [Stills Gallery](#) on page 65.

To capture still frames from File Player

Click the Capture button in the File Player control panel. The frame is captured to the Stills Gallery (see [Stills Gallery](#) on page 65).

File Player Schedule settings

You can schedule the File Player to play media files on the dates and times you specify. If you have the features installed, you can also schedule events for CD Audio, TV Magazine, Personal Video Recorder, and TV.

To set up scheduled events

Click the Setup button in the File Player control panel, then click the **Schedule** tab. The Schedule Wizard will guide you through creating new scheduled events. See [Schedule](#) on page 110 for details.

Schedule

Use the Schedule feature to activate events on the dates and times you want. You can schedule events for CD Audio, TV Magazine, Personal Video Recorder, File Player, and TV.

To set up scheduled events

Click the Setup button in the DVD, TV, CD Audio, or File Player control panel. Click the **Schedule** tab, and then click the **Create New** button.

The Schedule Wizard will guide you through creating new scheduled events. Step 4 of the Wizard asks if you want to set up feature-specific settings (for example, if you are recording video, you can specify quality and duration for particular events). When you click the **Finish** button, your event is added to the scheduled event list; checked items are active.

Schedule settings

Selection	Function
Name	The name of the event. Checked events are active.
Feature	The feature to schedule: CD Audio, File Player, Television, TV Magazine, Video Recording, or Video CD.
When	When the event occurs.
Next Run Time	The next time the event will run.
Modify	Click to change values for a scheduled event.
Delete	Remove a scheduled event.
Delete All	Remove all scheduled events.

- Events whose date (On Month & Day) has passed are not automatically removed. To re-activate an event, set its Month & Day to today or later.
- If a settings page is open, or if the About Help... box is being displayed, the Scheduler cannot process events. If an event occurs, a warning dialog tells you that a particular event was not processed.
- When the Multimedia Center first runs, if there are any scheduled events recorded, and the Scheduler program is not running, a warning dialog tells you that the scheduled events will not be processed.

You can run the Scheduler immediately, and/or install it in your Windows Startup file, so that it runs every time Windows is started. the warning dialog is displayed whenever you click OK after adding an item to the scheduled viewing list.

TV Out

You can connect a television set as your computer's display, and use your Multimedia Center to view computer output directly on your television in NTSC or PAL formats, connect using Composite or S-Video output capabilities, and display images on the TV and PC monitor simultaneously.

TV Out provides a big-screen experience for entertainment PCs that is ideal for playing games, giving presentations, watching movies, and browsing the Internet.

You must attach a TV before enabling TV out. For information on attaching a TV, see the User's Guide for your ATI card.

To enable the television display

- 1** In the Windows taskbar, click **Start**.
- 2** Point at **Settings ►**, then select **Control Panel**.
- 3** Double-click **Display**.
- 4** Click the **Settings** tab.
- 5** Click **Advanced...**
- 6** Click **Displays**.
- 7** Click the **TV** button.
- 8** Click **OK**.

To cancel TV Out, click the TV button to clear it.

For more information about television display, click Desktop Help.

Multi-Monitor Support

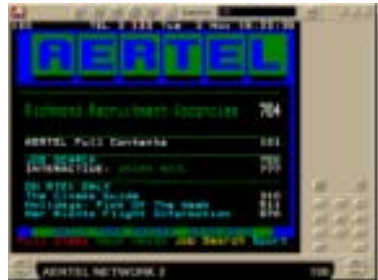

The DVI-I interface on ALL-IN-WONDER cards can be used to attach a DVI display or an analog monitor, using the supplied DVI-I-to-VGA adapter.

- The ALL-IN-WONDER VE does not support DVI-I.
- Hydravision technology supports DVI or CRT monitor and television.

Teletext

ATI's new Teletext application lets you get the most out of working with Teletext. ATI Teletext eliminates all the familiar disadvantages of television's teletext, and allows you to surf in the teletext data stream.

The *ATI Teletext User's Guide* provides complete installation and operating instructions.

Teletext is only available in Europe.

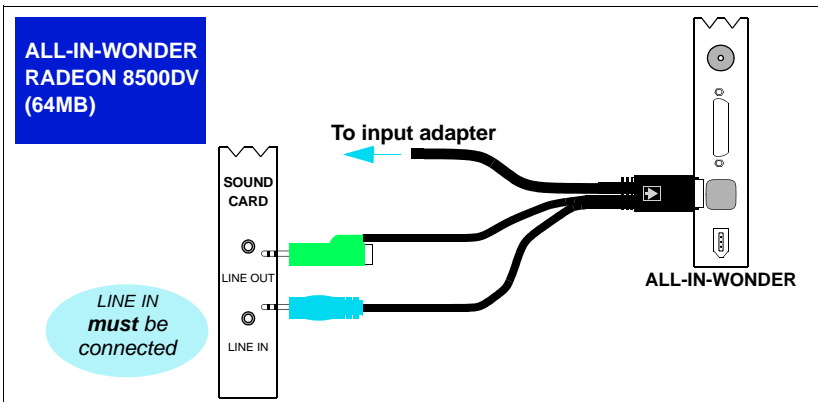

Troubleshooting

If you have problems with video or audio, try these suggestions.

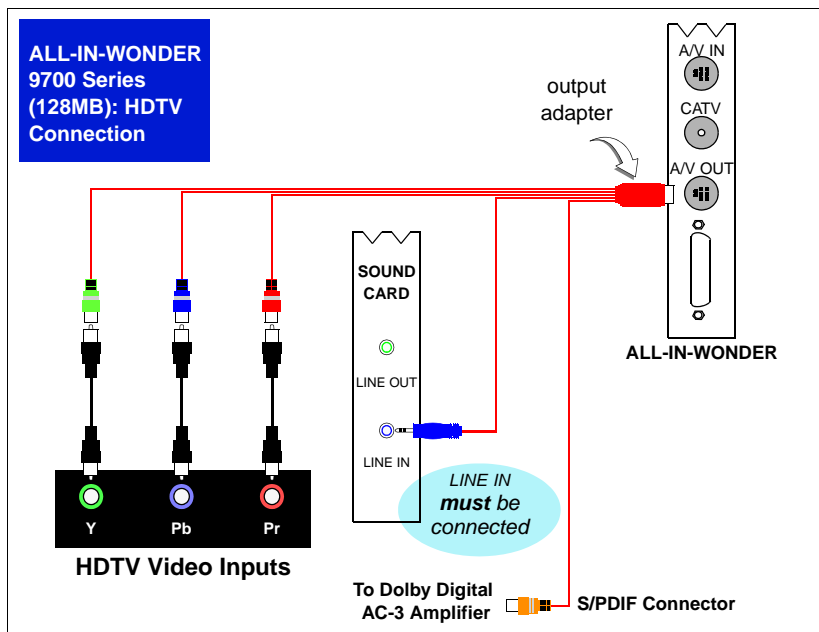

Audio problems ...

Problem	Suggested solution
<p>No Sound</p>	<p>If you have external speakers, ensure that they are powered-on (POWER indicator light is on) and connected to the LINE-OUT or SPEAKER OUT connectors on your sound card.</p>
<p>Still no sound?</p>	<ol style="list-style-type: none"> 1 Click Start, point at Settings, select Control Panel, then double-click Sounds. 2 In the Events area, Click Asterisk, then click a .WAV file in the Sound area. 3 Click the Play button  to preview the sound. <p>If you still do not hear any sound, open the Volume Control:</p> <p>Click Start, point at Programs, point at Accessories, point at Entertainment, then select Volume Control. Or, right-click the speaker icon  (usually in the lower-right corner of your screen), then click Open Volume Controls.</p> <p>If the speaker icon is not in your Taskbar, do the following:</p> <ol style="list-style-type: none"> 1 In the Windows Taskbar, click Start, point to Settings, click Control Panel, then double-click Multimedia. 2 In the Audio tab, check Show volume control on the Taskbar, and ensure that the Volume Control and the Wave channel are not muted or set very low. <p>When you hear sound from your speakers, you know they are working. If you still experience audio problems, check the audio connections to your ALL-IN-WONDER card.</p>

Problem	Suggested solution
<p>No sound from TV</p>	<p>Ensure that the audio connection between your ALL-IN-WONDER card and your sound card is correct. For complete installation instructions, refer to the appropriate <i>Installation and Setup User's Guide</i>:</p> <ul style="list-style-type: none"> • ALL-IN-WONDER RADEON 8500DV / 8500 / 7500 / RADEON • ALL-IN-WONDER 9700 Series • ALL-IN-WONDER 9000 PRO.

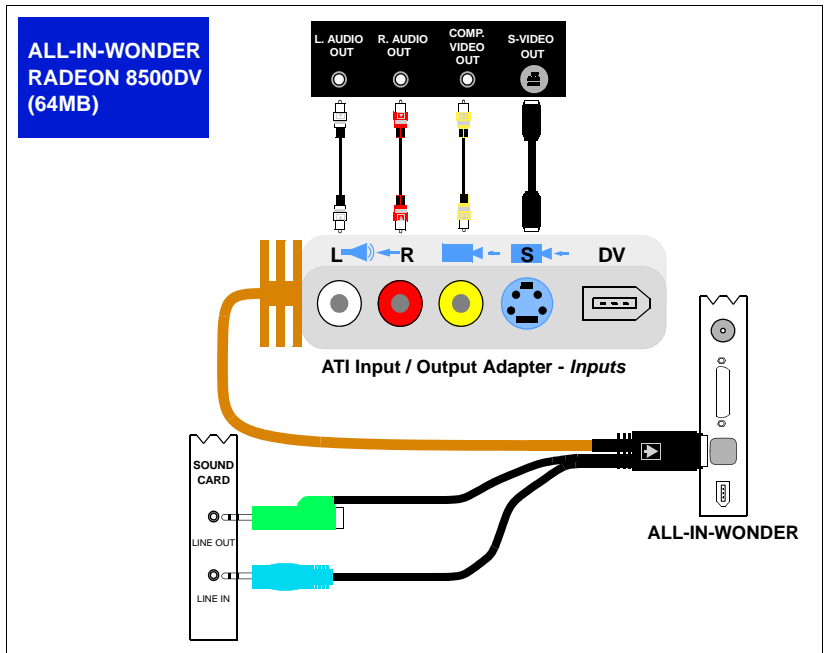

Problem	Suggested solution
No sound from TV	Ensure that the audio connection between your ALL-IN-WONDER card and your sound card is correct. For complete installation instructions, refer to the appropriate <i>Installation and Setup User's Guide</i> : <ul style="list-style-type: none"> • ALL-IN-WONDER 9700 Series • ALL-IN-WONDER 9000 PRO.

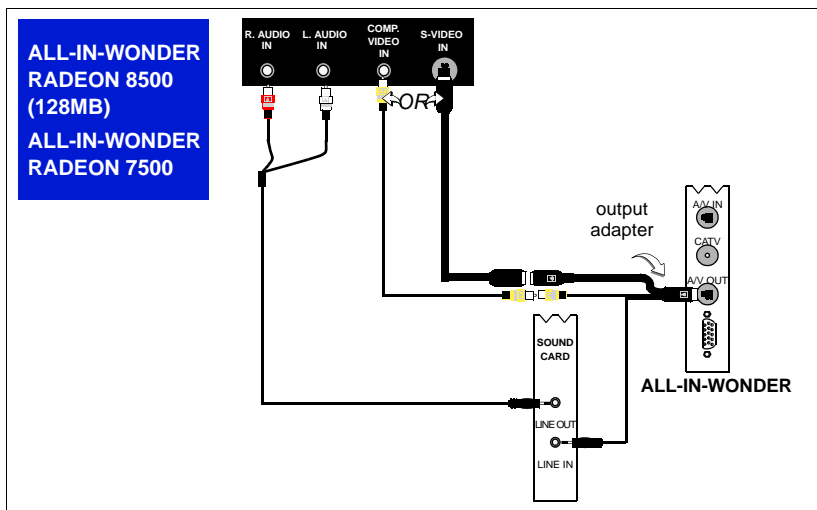

Problem	Suggested solution
Can't record sound	<p data-bbox="330 1092 678 1117"><i>Check the record mixer settings:</i></p> <ol style="list-style-type: none"> <li data-bbox="330 1133 944 1271">1 Click Start, point at Programs, point at Accessories, point at Entertainment, then select Volume Control. Or, right-click the speaker icon  (usually in the lower-right corner of your screen), then click Open Volume Controls. <li data-bbox="330 1287 891 1369">2 In the Volume Control menu, click Options, click Properties, click Recording, then click OK. The Recording Control opens. <li data-bbox="330 1385 944 1490">3 Ensure that the Select box for Line-In (or the Audio input you selected in the <i>Sound Initialization Wizard</i> — see page 9) is checked, and that the Volume slider is set to its mid-point. Click  to close the dialog.

Problem	Suggested solution
<p>Can't record sound when recording from a videotape</p>	<p>Left and right audio output from your VCR must be connected to your ALL-IN-WONDER card (note that S-Video does not provide an audio connection). For complete installation instructions, refer to the <i>ALL-IN-WONDER RADEON 8500DV / 8500 / 7500 / RADEON Installation and Setup User's Guide</i>.</p>

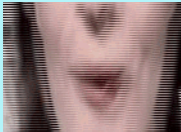

Problem	Suggested solution
No sound on the videotape when outputting to a VCR	Left and right audio output from your VCR must be connected to your ALL-IN-WONDER card (note that S-Video does not provide an audio connection). For complete installation instructions, refer to the <i>ALL-IN-WONDER RADEON 8500DV / 8500 / 7500 / RADEON Installation and Setup User's Guide</i> .

Video problems ...

Problem	Suggested solution
<p>Video is unstable or only black and white</p>	<p>Check that you are using the correct broadcast standard format.</p> <ul style="list-style-type: none"> • See <i>Broadcast Standard</i> in TV video settings on page 17. For proper operation, you must specify your country in the <i>TV Channels Initialization Wizard</i> (see page 9). • Check the quality of your incoming TV signal on another receiver; bad reception may be the cause. • Try connecting your tuner directly to the cable TV or antenna source. Too many splitters in the cable will degrade the signal.
<p>There is no video or audio</p>	<ul style="list-style-type: none"> • Ensure that your cable or antenna is connected. • Ensure that the video connector is set to the correct source (see Connector in TV video settings on page 17). • Check that the audio and video connectors are securely plugged into the correct jacks. • Check that your video card is securely seated in its slot. Please refer to the user guide for the card location.
<p>Video recording stops unexpectedly</p>	<ul style="list-style-type: none"> • Video files are typically very large; ensure that you have sufficient disk space. • Ensure that you are recording to the correct hard disk — click the Disk Space Settings button in Personal Video Recorder settings (see Personal Video Recorder settings on page 40). • Disable screen savers while recording. • Disable Power management while recording.

Problem	Suggested solution
Dropped frames during video recording	<p>Dropped frames during video recording indicates that some part of the system is not fast enough to keep up with the recording. Recording video is a very demanding task for even the most powerful system. To achieve the best results, you must dedicate the PC to recording, and ensure that nothing else is active during recording.</p> <p>MPEG recording requires a very fast CPU to encode the video.</p> <ul style="list-style-type: none">• Select I Frame Only in the Personal Video Recorder tab in Setup.• Reduce the frame size of the recording. <p>AVI recording creates very large files very quickly, and requires a fast hard disk system.</p> <p>Try a lower frame size, for example, 320x240. If you do not drop frames using 320x240 frame size, but frame drops do occur at larger frame sizes, your hard disk may not be fast enough.</p> <hr/> <ul style="list-style-type: none">• Defragment your hard drive.• A large, dedicated disk is recommended if you plan to do much video recording.• Ensure that DMA is enabled for your hard drive, to improve disk access speed and free up the system CPU.• Close all other running tasks, including those in the System Tray — clock, popup reminders, virus scanners, etc.• Close and exit from any Task Scheduler.• Do not log on to your network.• Do not connect USB devices while recording.• Do not open or close CD-ROM trays while recording.• Do not move the mouse while recording.

Problem	Suggested solution
<p>Recorded video has horizontal lines (“combing”)</p> 	<ul style="list-style-type: none"> • If you are recording to AVI format, reduce the line count in the Frame Size. For example, change the frame size from 480x480 to 480x240. In the Personal Video Recorder Settings page, click the Set Custom... button, then click the Edit... button, choose your AVI preset, then edit the frame size. (See Personal Video Recorder settings on page 40.) • If you are recording in MPEG format, ensure that Deinterlacing is checked. In the Personal Video Recorder Settings page, click the Set Custom... button, then click the Edit... button, choose your MPEG preset, then check Deinterlacing.

DVD problems

The following information applies to Windows® 98 and Windows Me, but many of the suggestions may also apply to Windows 2000. Before proceeding, ensure that your computer meets these conditions:

- An ATI display adapter is installed
- A current ATI display driver is installed
- The ATI Multimedia Center is installed
- Your CPU supports MMX instructions (early Pentium and Pentium PRO CPUs do not support MMX) PC Check tests your CPU (see [page 6](#)).
- AGP support is enabled and functioning properly. If you are using an AGP display card, and the DVD player hangs, AGP support is probably not working properly.

Other things to consider

For older DVD drives, contact the DVD manufacturer for a firmware upgrade.

If DVD movies appear bright and then dim when viewed on a TV, do not patch the video through a VCR; connect the ATI TV output directly to the TV, using the composite or S-Video connections. This problem only occurs when a VCR is connected between the TV output of the ATI display adapter and the TV.

ATI display adapters with TV OUTPUT capability will enable copy protection during DVD movie playback. The copy-protected video will effectively prevent a VCR from recording a watchable movie. If you videotape a copy-protected movie and then play it back, you will typically see occasional glimpses of the movie interspersed with 20 to 30 seconds of no picture or possibly just a blue screen.

Even if you are not recording the movie, the VCR attempts to compensate for the copy-protected signal and this generally leads to the symptom described. (Bright and dim display on the TV).

Remember that sound connections are completely independent of the video connections; if you wish to hear the DVD movie through the TV, you will also need to connect the audio output of the PC to the TV.

If the DVD Player exhibits problems such as:

- DVD Player launches, but the ATI DVD splash screen is all you can see.
- DVD Player launches, but the display window is black.
- DVD image is jumpy, or appears to be dropping frames.
- DVD image looks blocky.

Try these suggested solutions:

Make sure you have a DVD movie disk in the DVD-ROM drive.

Try a different DVD movie disk. Before proceeding, make sure that a bad or incompatible DVD is not the problem. Test two or three disks. Some reasons that a DVD will not play include:

Improperly authored DVD content. If some DVDs play and others do not, try using the DVD menus to access different chapters on the DVD.

Dirty DVD disk. DVDs with scratches, smudges, or fingerprints may not be playable. Try cleaning the disk.

Wrong region code. If you are using a DVD intended for playback in a different region, you should see an error message; however, always check the DVD label to ensure that it matches your region.

Check your sound card. The DVD Player displays only the splash screen if there is a problem with the WAV playback device on the sound card. Use Windows Device Manager to ensure that "This device is working properly".

Suggested solutions

Close other programs. If a DVD movie is jumpy or drops frames, other tasks may be causing the problem. Many programs display an icon on the Windows taskbar. Right-click the icon, then click Exit or Close.

Ensure that a current version of DirectX is installed. Very generally, DirectX is an interface between applications and games and the drivers that run your graphics, sound and other hardware. PC Check tests DirectX (see [To access PC Check](#) on page 6.)

(Windows 9x) Ensure that the Hardware Acceleration slider is set at Full.

- 1 Click Start, point at Settings, then click Control Panel.
- 2 Double-click System, then click the Performance tab.
- 3 In Advanced settings, click the Graphics... button, and ensure that the Hardware acceleration slider is set to Full.

(Windows 9x) Use MSCONFIG to ensure that UDF (Universal Disk Format) is enabled. Microsoft DVD playback software requires that UDF be mounted on DVD disks.

- 1 Click Start, click Run, type msconfig, then click OK.
- 2 Click the Advanced... Button, then Un-check Disable UDF file system.

Check the Performance page of System Properties to see if you are using DOS compatibility mode. If your file system is forced to run DOS Compatibility mode, CD/DVD-ROM drives are not supported, and will not appear in Device Manager.

- 1 Click Start, point at Settings, then click Control Panel.
- 2 Double-click System, then click the Device Manager tab.
- 3 Check Device Manager to ensure that your DVD-ROM drive is available in Windows.

Make sure that the protected-mode driver is not damaged. For all ESDI and IDE drives, Windows uses ESDI_506.PDR in the IOSUBSYS directory to provide 32-bit disk access.

For SCSI controllers, Windows uses SCSIIPORT.PDR and a "mini-port" (.MPD) driver to provide 32-bit access.

Manually extract ESDI_506.PDR or SCSIIPORT.PDR files from the Windows disks or CD-ROM, or run Setup, and select the Verify option.

Suggested solutions

Remove Real Mode (DOS) drivers for the DVD-ROM drive. Real mode CD-ROM drivers may interfere with proper DVD-ROM operation. Real mode drivers for the CD-ROM are only required if you wish to access the CD-ROM from DOS. Look in the CONFIG.SYS file for CD-ROM drivers that may be loaded.

Following are some examples of "DEVICE=" lines that load REAL MODE CD-ROM drivers.

```
DEVICE=C:\SBDC\DRV\SBIDE.SYS /D:MSCD001 /P:170,15 /V
```

```
DEVICE=c:\bin\AOATAPI.SYS /D:MSCD003
```

```
Device=C:\DEV\AOATAPI.SYS /D:miscd000
```

To determine if the CD-ROM driver is the source of the problem, simply edit the CONFIG.SYS file and add the letters "REM" to the beginning of the "DEVICE=" line. (e.g. REM DEVICE=CR_ATAPI.SYS /D:MSCD0001). Save the CONFIG.SYS file, reboot the system and see if the problem still occurs.

NOTE: the REAL MODE CD-ROM driver is not usually required for Windows 98 to access the CD-ROM drive. The REAL MODE driver is only required to access the CD-ROM when booting to DOS MODE.

Disable UDMA support in CMOS. Some motherboards do not function properly when the built-in UDMA support is enabled. In some cases, Windows DMA support will not appear in Device Manager when UDMA is enabled in CMOS.

- 1 Turn on your PC, and press the Del key or the F2 key to enter the CMOS setup screens. (Different BIOS makers may use a different key; check the screen for a message that tells you which key to use.)

- 2 Disable UDMA support for all IDE devices; for example, an Award BIOS under Integrated Peripherals typically shows:

```
IDE primary Master UDMA AUTO <  
(Change to Disable.)
```

```
IDE Primary Slave UDMA AUTO <  
(Change to Disable.)
```

```
IDE Secondary Master UDMA AUTO <  
(Change to Disable.)
```

```
IDE Secondary Slave UDMA AUTO <  
(Change to Disable.)
```

Save the new settings, then exit CMOS setup.

Suggested solutions

Enable DMA for the DVD drive in Windows. Windows DMA support for DVD drives usually improves playback performance. PC Check tests your DMA settings (see [To access PC Check](#) on page 6.)

Install the DVD drive on the second IDE channel as a Master device. DVD drive performance is best when the DVD drive is installed as a Master device on the second IDE channel.

Warning: If you are unfamiliar with the internals of your PC, do not remove the cover. Contact your system vendor or a knowledgeable friend to assist you.

Always turn off system power before removing the PC's cover.

Most systems come pre-configured with one IDE hard drive and one CD-ROM or DVD-ROM drive. The IDE hard drive is always connected to the PRIMARY IDE controller as the MASTER device. Typically the CD-ROM or DVD-ROM drive is connected as a SLAVE device on the PRIMARY IDE controller. Most system builders use this approach because it only requires one IDE ribbon cable.

If the DVD-ROM drive is connected to the same ribbon cable as the hard drive then the DVD-ROM drive is configured for SLAVE operation on the PRIMARY IDE controller.

In order to connect the DVD-ROM drive as a MASTER device on the SECONDARY IDE controller you must;

- Obtain another IDE cable.
- Configure the DVD-ROM drive as a MASTER.
- Connect the DVD-ROM drive to the SECONDARY IDE controller.
- Ensure that the SECONDARY IDE controller is enabled.

Obtain another IDE cable

If you do not have another IDE cable handy you should be able to acquire one from your system vendor and failing that any computer store will likely have cables available for sale. IDE ribbon cables come in various lengths and typically have three (40 pin female) connectors. Obviously you must make sure you get a cable that will reach from the connector on your system board to the connector on the back of the DVD-ROM drive, but try to keep the overall IDE cable length under 18 inches (45 cm). (Longer cables will degrade the signal quality and may cause problems with high speed data transfer.)

Suggested solutions

Configure the DVD-ROM drive as a MASTER.

DVD-ROM drives typically have jumpers used to select MASTER or SLAVE operation. These jumpers are usually located on the rear of the DVD-ROM drive. There should be a label on the drive that will indicate where the jumper should be positioned to set the drive as a MASTER.

Connect the DVD-ROM drive to the SECONDARY IDE controller.

Now that you have a cable and you have set the DVD-ROM drive to be a MASTER you are ready to make the connections.

- 1 Power off the system and remove the cover.
- 2 Disconnect the existing ribbon cable from the rear of the DVD-ROM drive.
If the DVD-ROM drive was connected to the middle of the existing cable you may proceed with the install.
If the DVD-ROM drive was connected to the end of the cable you should disconnect the middle connector from the hard drive and reconnect the end of the cable to the HARD DRIVE.
Any cable or BUS must be properly terminated at both ends of the cable. Do not connect devices to the middle of a cable and leave a cable end dangling.
- 3 Use the new IDE cable and connect one end to the SECONDARY IDE connector on the system board. The PRIMARY and SECONDARY IDE connectors are usually located close together on the system board. The PRIMARY connector should already have a ribbon cable installed and this ribbon cable should be the same cable you originally disconnected from the DVD-ROM drive.
- 4 Connect the other end of the new IDE cable to the DVD-ROM drive. Make sure that any cable you disturb is properly seated before applying system power.
- 5 Replace the system cover and turn the system ON.
You may need to go into the system CMOS configuration and ensure that the SECONDARY IDE controller is enabled and set to AUTO DETECT the devices on the IDE bus.
During the system boot process you should see an indication on the main monitor that the DVD-ROM drive has been detected as the SECONDARY MASTER device. (The messages you see may differ depending on the make and version of your system BIOS.)

Suggested solutions

- 6 When Windows 9x loads, open WINDOWS EXPLORER and see if you can find the DVD-ROM drive. In the example described here the DVD-ROM drive should appear as drive letter D:. (Because there is only one hard disk (C:) and we are assuming that it is not partitioned); If your hard disk has been partitioned or if you have multiple hard disks, the DVD-ROM drive will generally be the highest assigned drive letter.

You may wish to insert a regular CD-ROM disk into the DVD-ROM drive and ensure that you can read it by browsing with WINDOWS EXPLORER. (An ATI installation CD may be used for this step) If the CD-ROM auto launches then you know that the DVD-ROM drive is installed properly and working.

If you continue to experience difficulties:

If you continue to experience difficulties using the DVD-ROM drive, particularly when playing DVD movies, there are a few things, listed below, to consider. Even if you don't understand the concepts described below, you should do your best to investigate and document any information you can before calling for technical support.

- Systems that have the port driver Mkeatapi.mpd v.2.01 installed for the hard disk controller may experience problems. If your system has this driver installed and you are experiencing difficulties, upgrade this driver.
- Real mode CD-ROM drivers may interfere with proper DVD-ROM operation. Look in the CONFIG.SYS file for CD-ROM drivers that may be loaded. Real mode drivers for the CD-ROM are only required if you wish to access the CD-ROM from DOS. Your emergency boot diskette should be configured with real mode CD-ROM drivers. But these drivers should not usually be required for normal operation in Windows 9X.
- DVD-ROM drives that were originally connected to a special hardware DVD decoder board may only work with that board and with special drivers.
- Older DVD-ROM drives may experience performance issues and/or may require a firmware revision (consult the DVD manufacturer) for correct operation. A second generation or newer DVD-ROM drive is recommended for the best results.
- If you have installed more than one DVD movie solution it is possible that they will interfere with each other. It is quite possible for multiple DVD solutions to co-exist and even run simultaneously, however; if you are having problems it is best to focus on only one application at a time and also give that application the cleanest environment possible.

Suggested solutions

If problems persist:

BEFORE you call Customer Support, please have the following information ready:

- Detailed description of the problem
- Motherboard manufacturer
- System BIOS manufacturer
- Make and model of DVD drive
- DVD drive interface (IDE or SCSI)
- Drive letter assigned to the DVD drive by Windows
- DVD title(s) that are not working properly
- Operating system name and version
- ATI display adapter model or name
- ATI display driver version
- ATI DVD Player software version
- Sound card name and manufacturer — if integrated, provide chipset type.

To email your system information:

- 1 Click Start, click Run..., then type MSINFO32. This will gather information about your computer's configuration.
- 2 In the Microsoft System Information box, click File, click Export..., and save the report as a .TXT file, which you can email to Customer Support. (This file can be large — you may want to use a ZIP-compatible compression program to reduce its size.)
