

## Security Camera Input Card for DM Switchers

The DMC-VID4 is an input card for a Crestron DigitalMedia™ Switcher, providing four composite video inputs w/built-in sequential switching and quad processing.

The DMC-VID4 is designed to allow up to four security cameras to be viewed individually or simultaneously in quad, dual, or full screen modes. When viewing full screen, the input may be selected manually or sequentially. The sequential switching function cycles automatically through each available input, displaying each source one at a time per a user-definable duration. In any mode, dynamic colored text overlay capability allows each window or source to be clearly identified.

A local HDMI output connection is also provided on the card, allowing the processed video signal to be fed to a local device, or to a second DM switcher for output expansion purposes.
